DIGEST OF AIR TRAFFIC CONTROL PROCEDURES

This digest is prepared expecially for the use of pilots operating within control areas, airport approach zones and airport traffic zones. For detailed information, see Civil Aeronautics Administration Manual 60, AAF Regulation 60-16, and pertinent Navy Publications.

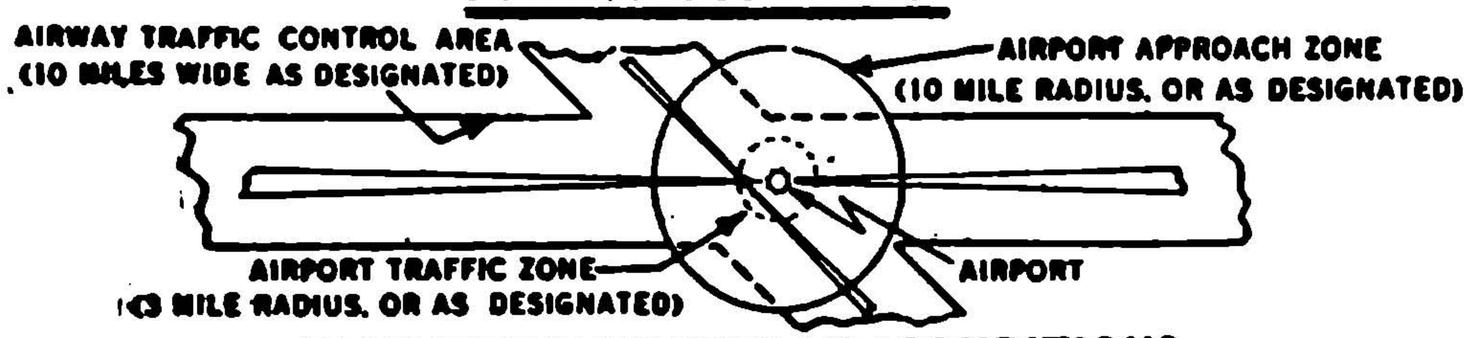
CONTACT FLIGHT RULES WEATHER MINIMUMS

	Inside Airport Traffic Zone (3-mile radius)	Inside Control Area (but outside of Airport Traffic Zones)	Elsewhere
Flights at altitudes of more than 700 feet above surface	500 feet vertically, 2000 feet horizontally from all clouds* - 3 miles visibility*	500 ft. vertically, 2000 ft. horizontally from all clouds-3 miles visibility (or 1 mi. with traffic clearance)	500 feet vertically, 2000 feet horizontally from all clouds 1 mile visibility
Flights at altitudes of 700 feet or less above surface	500 feet vertically, 2000 feet horizontally from all clouds* - 3 miles visibility*	Clear of clouds** 1 mile visibility	Clear of clouds** 1 mile visibility

*If traffic conditions permit, a control tower or control center will issue a traffic clearance when the minimums are less than those specified, but under this provision the flight must remain clear of clouds.

**If airport approach zones flights must remain 500 feet vertically and 2000 feet horizontally from all clouds unless a center or tower issues a traffic clearance for flight "clear of clouds"

CONTROLLED AREAS



FLIGHT PROCEDURES AND CONDITIONS

The types of flight plans and conditions under which aircraft may be operated are summarized as follows:

CONTACT FLIGHT RULE (CFR)- Aircraft must be flown in weather conditions equal to or better than those outlined in the weather minima chart without benefit of reductions authorized by a traffic clearance. No flight plan or communication contacts are necessary other than as required by an airport traffic control tower for regulation of local airport traffic.

CONTACT FLIGHT RULE-CONTROLLED- Aircraft may be operated in weather conditions lower than the basic weather minima within control areas, airport approach zones, and airport traffic zones, providing the pilot files flight plan specifying the route to be flown with an airway traffic control center or airport traffic control tower, he receives a traffic clearance and he complies with all conditions stipulated in the clearance. Communication contacts and position reports may be required by Air Traffic Control for this type of flight, as traffic control separation will be afforded aircraft on the same basis as aircraft operating on an IFR flight plan.

INSTRUMENT FLIGHT RULE (IFR)- Pilots proposing to operate aircraft in accordance with instrument flight rules are required to: file a complete flight plan with an airway traffic control center or airport traffic control tower and obtain a traffic clearance from the center or tower prior to flight; maintain continuous listening watch on the appropriate radio frequency, and report by radio the time and altitude of passing each designated reporting point. When an aircraft on an IFR flight plan is operating in weather conditions lower than the basic CFR minima a minimum altitude of 1000 feet above the surface must be maintained.

A traffic clearance specifying that a portion of a flight is to be conducted in accordance with contact flight rules (CFR) will require that the pilot maintain without reduction, the basic contact flight rule minima as specified in CAR 60 and assume the responsibility of avoiding other aircraft during the portion of the flight specified. In the event of two way radio failure, a pilot may (1) proceed according to current flight plan, maintaining the minimum safe altitude or the last acknowledged assigned altitude, whichever is higher, to the range station from which approach will be started to the airport of intended landing, and commence descent at approach time last authorized; or if such time has not been received and acknowledged commence descent at the time of arrival specified in the flight plan. Under such conditions a full standard instrument approach should be executed unless a CFR approach is made; or (2) if weather conditions permit, proceed in accordance with CFR; or (3) land as soon as practicable. Normally, if the aircraft is operating in CFR weather conditions at the time the radio failure is discovered, the pilot should proceed in accordance with contact flight rules to the airport of first intended landing or to the nearest suitable airport. If this is not possible, the pilot will proceed according to current flight plan. In order that uniform flight levels will be maintained by all aircraft, the altimeter should always be set to the altimeter setting of the nearest reporting station as the flight proceeds. The altimeter setting is issued by the Weather Bureau, and when placed on the barometric scale of the altimeter, will result in a reading of the elevation above sea level on the height scale of the instrument.

Traffic Clearances: In order to prevent delay to aircraft operating in contact flight rule weather conditions and yet ensure adequate separation when and if instrument flight rule weather conditions are encountered, traffic clearances to pilots filing instrument flight rule (IFR) flight plans may amend such flight plans by requiring flight in accordance with contact flight rules (CFR) for all or a portion of the flight. A traffic clearance will specify the approved altitude followed by the abbreviation "CFR". Upon receipt of such clearance, the pilot will be responsible for avoiding other aircraft while operating in CFR weather conditions and for securing an amended clearance at the specified altitude before IFR weather conditions are encountered. The pilot must remain in CFR weather conditions until the amended clearance is received. For efficient operation, the use of this procedure can only be determined by Air Traffic Control. Pilots, therefore, should not file "altitude/CFR" in any flight plan. "Altitude/CFR" is to be used only in a traffic clearance issued by Air Traffic Control.

N.B. A flight plan is required on all AAF flights except for local flights within a defined local flying area.

Arrival Reports-It should be noted that whenever a flight plan has been filed whether for CFR or IFR operations, an arrival report is required, unless the pilot has stated in the flight plan that such report will not be filed.

Maintenance of Flight Altitudes-Within control areas, aircraft should be flown at even or odd thousand-foot levels above sea level depending upon the direction of flight as indicated by odd or even minimum altitudes shown on Flight Planning Charts, unless other altitudes are assigned and approved by an airway traffic control center.

Cruising altitudes outside of control areas or approach zones shall correspond to the direction of flight as indicated below:

MAGNETIC HEADING	Indicated Altitude (feet above sea level)
0° - 89° inclusive,	odd thousands: 1,000 ft.; 3,000 ft.; etc.
90° - 179° inclusive,	odd thousands plus 500 ft.: 1,500 ft.; 3,500 ft.; etc.
180° - 269° inclusive,	even thousands: 2,000 ft.; 4,000 ft.; etc.
270° - 359° inclusive,	even thousands plus 500 ft.: 2,500 ft.; 4,500 ft.; etc.

AIRPORT TRAFFIC CONTROL PROCEDURES

Aircraft with Two-Way Radio: If operating under contact flight rules, arriving aircraft should establish communication with the control tower when approximately 15 miles from the airport of destination. The tower will issue such instructions as are necessary. Pilots should remain tuned to the tower until the landing is completed and the aircraft parked. If on an instrument flight plan, arriving aircraft should remain on range frequency as long as required for navigational purposes. The control tower should not be contacted until after a clearance "to the tower" has been received and the aircraft is 15 miles or less from the airport and clear of clouds, unless otherwise instructed. The clearance, "Cleared to Blank Tower", is also approval for approach subject to any restrictions or instructions contained in the clearance. This clearance, without any restrictions, is approval to make approach for a landing using whatever type of approach desired by the pilot.

Aircraft with Receiver Only: Remain tuned to the tower at all times when within the airport traffic zone. Acknowledge signals in the daytime by movement of ailerons or rudder on the ground and by rocking wings in the air, & at night by flashing landing light. Clearance from the tower should be received for taxiing, landing and taking-off; however, sufficient movement of the aircraft to attract the attention of the tower is permitted. If tower does not issue radio instructions, watch for light signals as the tower may not realize that the aircraft is equipped with a receiver.

Aircraft without Radio Equipment: Observe the tower for light signals, and acknowledge as above. The light signals are:

VISUAL SIGNALS FROM PORTABLE TRAFFIC SIGNAL LIGHT

Color and Type of Signal	Taxi-ing	Ready for Take-off	In Flight
STEADY GREEN	XXXXXXXXXXXX	Cleared for Take-off	Cleared to Land
FLASHING GREEN	Continue Taxi-ing	XXXXXXXXXXXXX	XXXXXXXXXXXXXXX
STEADY RED	Stop	Clear the Runway Immediately, and Wait	Give Way to Other Aircraft and Continue Circling
FLASHING RED	Return to Hangar Line	Return to Hangar Line	Return and Land
ALTERNATING RED AND GREEN	General Warning Signal - Exercise Extreme Caution		

Traffic and Taxi Patterns have been established at busy airports to illustrate the desired flow of aircraft on the ground and in the air under specified wind conditions. If the traffic pattern is not known, follow other aircraft unless otherwise instructed.

If a pilot does not receive either radio or visual signal from the tower when approaching for a landing, he should make at least one complete circle of the airport conforming to the traffic pattern, and then start approach for a landing. The pilot should be on the alert for a signal from the tower and maintain a watch for other aircraft.

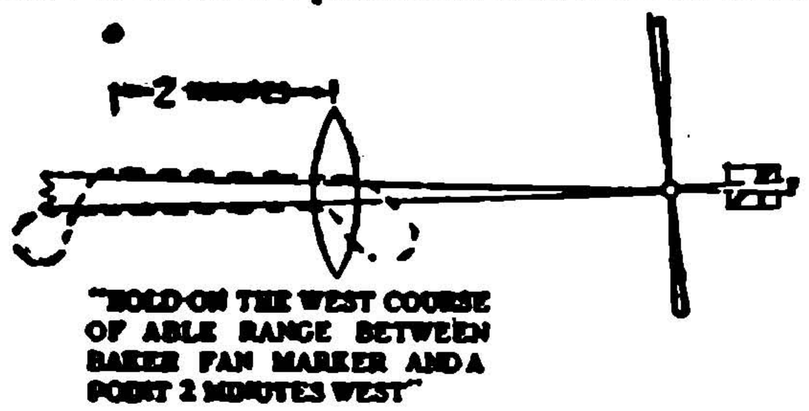
HANDLING OF CFR FLIGHT PLANS, AND ARRIVAL REPORTS

CFR flight plans may be filed with any CAA airways communication station or airway traffic control center. These flight plans are not transmitted to the point of destination but are held in suspense until notice of arrival is received. One hour after the estimated time of arrival, if no notice of arrival is received, queries are sent out over CAA communication systems to determine the location of the aircraft. If the arrival report is not received within three hours, search and rescue operations are initiated. Inasmuch as the Government may be put to considerable expense in determining the location of aircraft when an arrival report is not filed, it is vitally necessary that all pilots using this service make certain that notice of arrival is filed with the CAA communications station at the termination of the flight. Arrival reports are transmitted over CAA circuits to the station holding the flight plan.

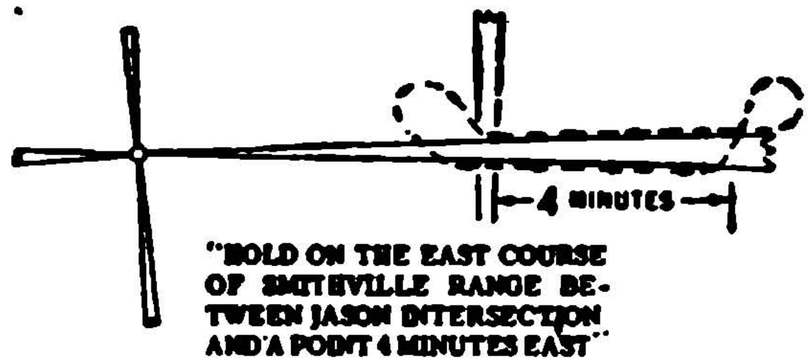
In order to reduce radio congestion, pilots should file CFR flight plans, when required, in person or by telephoning the airways communication station or airway traffic control center. CAA control towers have discontinued accepting CFR flight plans for transmission and will not normally file arrival reports except upon the specific request of the pilot. Whenever practicable, however, it is desired that arrival reports be filed in the same manner as flight plans.

HOLDING PROCEDURES FOLLOWED BY AIRCRAFT AT RADIO FIXES

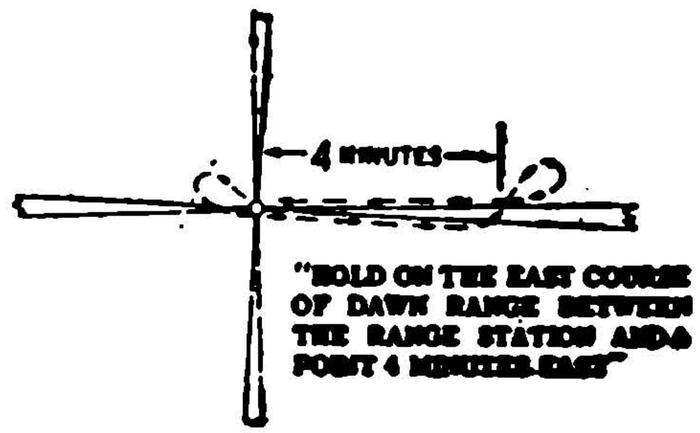
The standard holding flight path of an aircraft operating on an instrument flight rule flight plan and being held at a radio fix is to follow the right edge of the on-course signal of the specified leg of the appropriate radio range. The aircraft shall hold between the designated holding point and a point 4 minutes' flying time therefrom in the direction specified starting procedure turns at the holding point and a point 4 minutes therefrom. Unless prevented by obstructions or unless otherwise advised by an Airway Traffic Control Center or Civil Aeronautics Administration Airport Traffic Control Tower, the initial turn of a procedure turn shall be made to the left when flying away from the range station and to the right when flying toward the range station. The point to be used as the designated holding point will be identified in the traffic clearance which contains instructions for the aircraft to hold. When holding at an approach control marker, the holding flight path will extend from the specified holding point to a point not to exceed 2 minutes' flying time therefrom in the direction specified. When instructions are received giving the time of departure from the holding point, the pilot may adjust his flight path so as to be able to depart from the marker at the exact time specified.



"HOLD ON THE WEST COURSE OF ABLE RANGE BETWEEN BAKER FAN MARKER AND A POINT 2 MINUTES WEST"



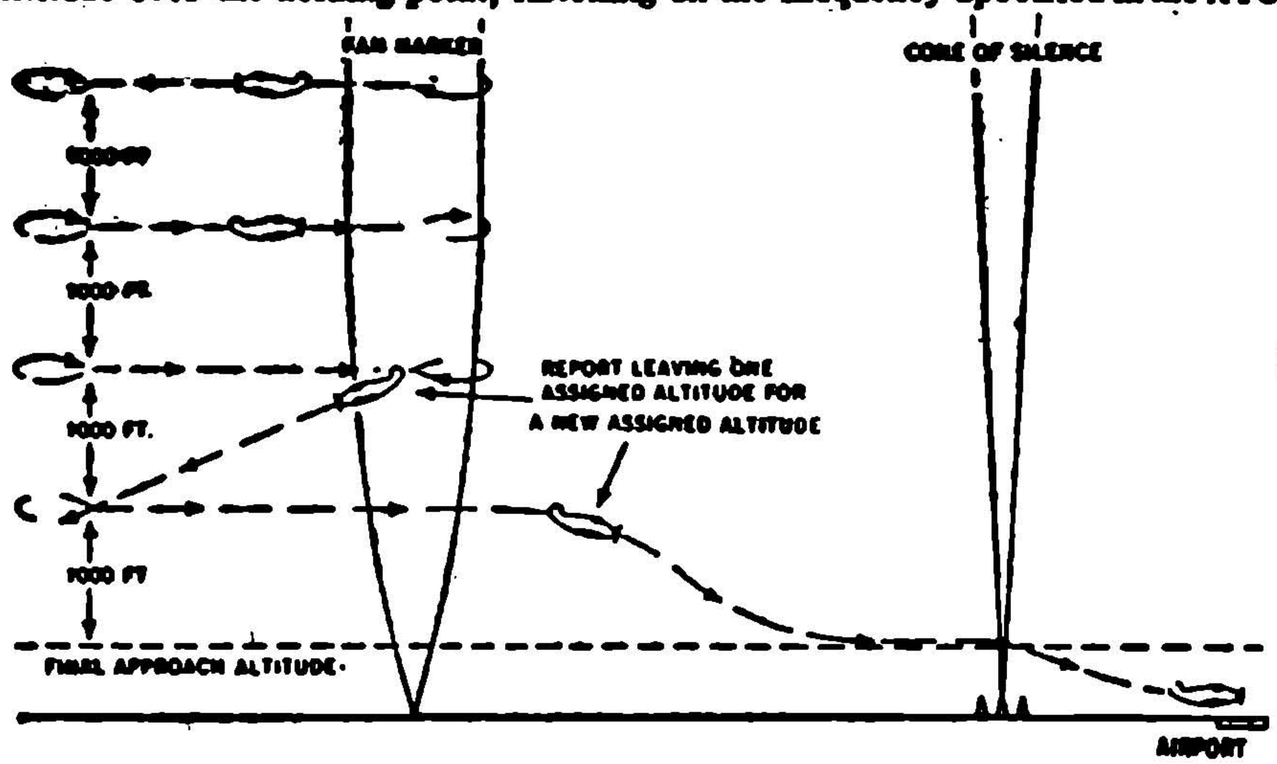
"HOLD ON THE EAST COURSE OF SMITHVILLE RANGE BETWEEN JASON INTERSECTION AND A POINT 4 MINUTES EAST"

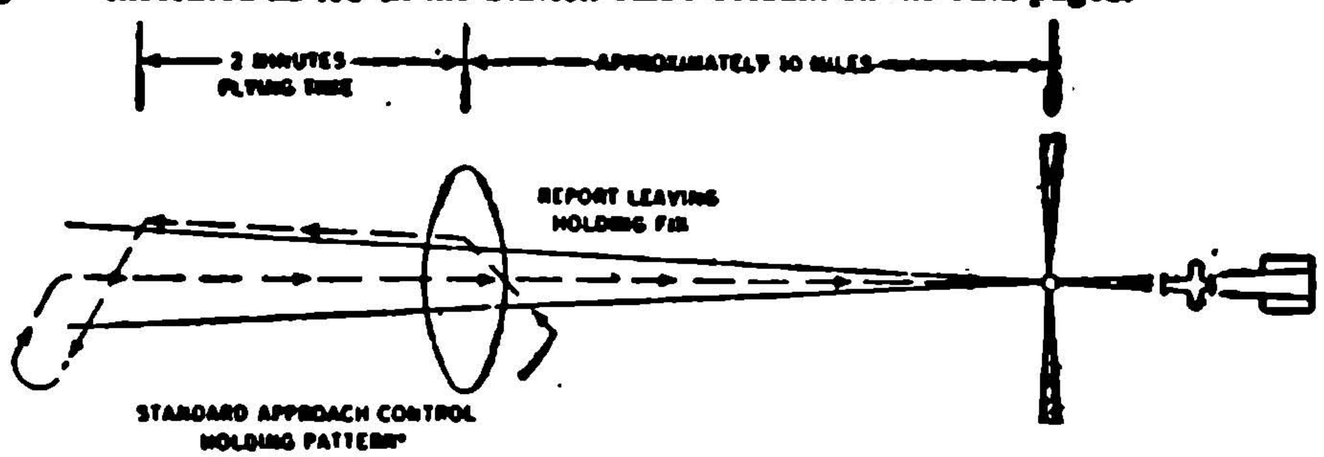


"HOLD ON THE EAST COURSE OF DAWN RANGE BETWEEN THE RANGE STATION AND A POINT 4 MINUTES EAST"

APPROACH CONTROL PROCEDURES

Approach control is a service whereby Civil Aeronautics Administration airport traffic control towers issue control instructions in instrument weather conditions, by communicating directly with pilots over the voice feature of a radio range, or over a very-high frequency channel of the control tower. Ordinarily, aircraft will be cleared by the airway traffic control center to the holding fix, (fan marker or other radio fix) with appropriate holding instructions. Instructions to hold "UNTIL FURTHER ADVISED BY (Name of) APPROACH CONTROL ON (Blank) KILOCYCLES" are included by the arwy traffic control center so that the pilot will know on which frequency he will receive further instructions from the tower. When he arrives over the holding point, the pilot initiates a call to "(Name of) APPROACH CONTROL" and advises time and altitude over the holding point, listening on the frequency specified in the ATC clearance for further instructions. Radio contacts required thereafter: (a) when vacating any previously assigned flight level for a newly assigned level; (b) when leaving holding point. Each pilot in an approach sequence will be given advance notice as to the time he should leave the holding marker on approach to the airport. When the time of leaving the holding point has been received, the pilot should shorten the standard holding path remaining in the immediate vicinity of the marker so as to leave the marker as closely as possible to the designated time. Pilots should maintain communication by listening to approach control frequency until cleared to the tower's local control frequency (278 kc. or equivalent). Departing aircraft will receive initial instructions on the tower's local control frequency. Approach Control is established at locations indicated as AC in the station class column on the data pages.





*NOTE: STANDARD 2 MINUTE HOLDING PATTERN FOLLOWED BY ALL AIRCRAFT HOLDING UNTIL INSTRUCTIONS ARE RECEIVED GIVING TIME OF DEPARTURE FROM HOLDING POINT. THEN PILOT SHORTENS HOLDING PATH, REMAINING IN IMMEDIATE VICINITY OF HOLDING POINT SO AS TO LEAVE MARKER EXACTLY AT SPECIFIED TIME.

AIR NAVIGATION RADIO AIDS

LEGEND

(4) • Station guards 3105, 4495, 6210, 3117.5 kcs.
(7-24) - Hours of operation (7 a.m. to midnight) on a 24-hour clock basis
→ - New or revised data *

RADIO CLASS DESIGNATIONS

AC.....Approach Control Tower, CAA
B.....Scheduled Broadcast Station (broadcasts weather reports at 15 and 45 minutes after the hour unless otherwise cited.
C.....Control Tower, CAA
CA.....Control Tower, Army
CI.....Control Tower (City, County, Private, etc.)
CN.....Control Tower, Navy
D.....Distantly controlled
FM.....VHF fan type marker (100 watts)
FMK.....Compass locator station when combined with fan marker
GCA.....Ground control approach system
H.....Non-directional radio-beacon (homing), power 50 watts or more
ILS.....Instrument Landing System
IM.....VHF boundary marker
K.....Independent compass locator station
LFM.....VHF fan type marker, low powered (5 watts not over 10 miles from range)
MH.....Non-directional radio-beacon (homing), power less than 50 watts
ML.....Range (loop radiators), power less than 50 watts
MM.....VHF middle marker
MMK.....Compass locator station when combined with middle marker of Instrument Landing System
MRA.....Range (adcock, vertical radiators), power more than 50, less than 150 watts
MRL.....Range (loop radiators), power more than 50, less than 150 watts
OM.....VHF outer marker
OMK.....Compass locator when installed at outer marker, site or within 5.5 miles of middle marker
P.....Point to point radio
RA.....Range (adcock, vertical radiators) power 150 watts or more
RL.....Range (loop radiators), power 150 watts or more
S.....Simultaneous (range signals and voice) type of transmitter
T.....Teletype
TK.....Principal teletype
V.....Voice communication with aircraft
VAR.....Visual-aural VHF range
W.....Without voice facilities
Z.....VHF station location marker at a range station

N.B. Variation is computed at the station. The distance from station to field is computed from the center of the range station to the nearest edge of the usable area of the airport. The bearing is that from the range station to airport or fan marker.

AIRWAY RADIO COMMUNICATIONS

GENERAL

All radio range stations (class RA, RL, MRA, MRL, ML) emit directional signals (type A2 emission) 1020 cycles per second modulation.

All radiobeacon stations (class H and MH) emit non-directional signals (type A2 emission 1020 cycles per second modulation. Unless otherwise noted, all stations, other than class MH, operate continuously within their assigned hours of service except during interruptions for voice transmission on the same frequencies where simultaneous transmission is not available and during shutdowns for maintenance purposes. Class MH stations operate on request unless otherwise cited. The effective range of an MH facility is ordinarily 25 miles.

Compass locators are low-powered nondirectional facilities operating in the 200-415 kc. band. They are installed near airports to make it easier for pilots to make instrument approaches. When holding is required, they also help the pilot follow a more precise holding pattern. Compass locators, however, should not be depended upon as long range navigational aids since they are rarely useful at distances of over 15 or 20 miles.

Voice communications facilities are available unless "W" (without voice) is included in the classification. Examples: SMRAW, MRLW, HW, HWT. Transmission of voice on a frequency other than the range frequency is indicated as MRLW-V. When no "W" is included in station class, the "V" indicates voice feature on two frequencies, namely, range frequency and, generally, V.H.F. of 116.1 mcs.

The classification designation "B" denotes that the station broadcasts airway and meteorological information on a scheduled basis at 15 and 45 minutes past each hour unless otherwise cited.

All Civil Aeronautics Administration stations equipped for voice communications with aircraft stand continuous listening watches on the frequencies of 3105, 4495, and 6210 kcs., unless otherwise cited.

AUTOMATIC RANGE MONITORING SYSTEM

The automatic range monitoring system will automatically notify all pilots using a range on which it is installed, whenever an abnormal condition exists on the final approach course, the only course monitored at the present time.

The notification, or warning signal, will consist of the slow transmission of one group of three "U"s (. . - . . - . . -), between two station identification transmissions. This warning signal will be transmitted: (a) whenever a course displacement of 3° or more exists; (b) whenever a sudden and large loss of signal strength occurs; (c) or whenever an apparent on-course signal (loss of N-A keying, producing a monotone which sounds like an on-course signal) exists throughout all quadrants.

Loss of signal strength is obvious, and loss of N-A keying is easily ascertainable by the pilot whenever the three "U"s identify an abnormal condition. The flier should suspect course displacement upon hearing the warning signal, if there has been no drop in range signal strength and the interlocked N and A on-course signal is well defined. On the other hand, the loss of N-A keying is indicated by warning transmission once only, when normal identifications are also missing.

In the case of range course displacement, the greater the course displacement, the earlier in the period between station identification transmission will the "UUU" signal be heard. An occasional warning signal transmission not repeated in every cycle, followed by the normal identification, may be disregarded since it may be occasioned simply by momentary power fluctuations.

* UNDER THE HEAVY BLACK LINE FOUND IN THE THE RADIO SECTION OF THE DATA PAGES ARE LISTED, OUT OF ALPHABETICAL ALIGNMENT. ALL THE NEW RADIO FACILITIES TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

INSTRUMENT LANDING SYSTEMS

An Instrument Landing System comprises a localizer (possibly a glide path), and a boundary, middle and outer marker. Infrequently, the middle or boundary marker is not commissioned at present and future installations will have no boundary markers. The entire system of transmitters (localizer, glide path, and markers) operate on V.H.F. All markers operate on 75 mcs.

Compass locator stations, on the other hand, operate on the low frequency 200-415 kilocycle band. Compass locator data will be found under marker data on the second line of those stations having such facilities. These are, with rare exceptions, located at the same sites as the V.H.F. markers, and have single letter identifications.

The localizer course of the Instrument Landing System divides the blue sector (150 cycles), which is to the right of the course in respect to the landing aircraft on final approach, from the yellow sector (90 cycles), which is left.

(L5) or (L6) in the Location Column under Instrument Landing Systems indicates hi-intensity runway contact lights (L5) or hi-intensity instrument approach lights (L6).

VHF RADIO RANGES

Simultaneous Visual-Aural VHF Radio Ranges have two visual and two aural courses with simultaneous voice transmission on the range frequency. A range of this type operates in the band 112 to 118 mcs. (Certain stations have been temporarily assigned the following frequencies: 108.3 mc, 108.7 mc, 109.1 mc.). Modulation frequencies of 90 cps and 150 cps are used to produce the visual courses. The sector in which the 90 cps modulation predominates is to be known as the "Yellow Sector", and that in which the 150 cps modulation predominates is to be known as the "Blue Sector". The aural courses are produced through the use of "N" & "A" signals with modulation frequency of 1020 cps.

V.H.F. RADIO RANGE ORIENTATION: The assignment of the blue and yellow sectors and the "A" and "N" sectors of C.A.A. VHF radio ranges is accomplished in accordance with the following rules:

(a) On Green and Red Airways, the blue sector lies north of the visual course, the yellow south; the "N" sector lies to the east of the aural course; the "A" west.

(b) On Amber and Blue Airways, the blue sector lies west of the visual course, the yellow east; the "N" sector lies to the north of the aural course, the "A" south.

(c) The visual courses are projected along the airway, the aural courses across the airway.

U. S. WEATHER BROADCASTS AND TRANSMISSIONS

All continuously operated C.A.A. Radio Range and Radio Beacon Stations having voice facilities on the Range or Radio Beacon Frequencies broadcast weather reports at 15 and 45 minutes past each hour.

At each station the material broadcast consists of the local weather report and the latest available surface weather reports from surrounding locations. Reports more than one hour old are not broadcast. In addition, the local winds aloft report is broadcast four times daily at 6:15 and 12:15 A.M. and P.M. At selected stations the Weather Bureau provides a local terminal forecast covering the next two hours, and this forecast is broadcast, when available, immediately following the local weather report.

FILING OF "OVER" REPORTS

Pilots should make every effort to file "over" reports when passing over those points designated as "Radio Fixes" on the Radio Facilities Charts. Refer to Chart Legend.

Pilots of aircraft operating on contact flight rule flight plans who desire to make flight progress reports shall include in the report the phrase "CFR" flight plan from _____ to _____.

Pilots of aircraft operating on instrument flight rule flight plans and who are required, therefore, to make flight progress reports, shall include in the report the phrase "Instrument flight plan". NOTE: The word "instrument", rather than the abbreviation "IFR" is used to avoid confusion between the abbreviations "CFR" and "IFR" under difficult radio reception conditions.

RADIOTELEGRAPH CALLING PROCEDURE

Radiotelegraph (A2 emission), in addition to radiotelephone (A3 emission), may be used to call Civil Aeronautics Administration airway communications stations. Radiotelegraph (A1 emission) may be used, but its use will require a prearranged schedule since receivers at the stations are set for A2 or A3 emission only. The Civil Aeronautics Administration airway communications station will reply on the radio range voice channel except as otherwise provided. When calling Civil Aeronautics Administration airway communication stations, it is desired that the radio call letters of the station be used. However, the stations will be on the alert for calls consisting of the radio range identification (listed under "Station Identification"), which may be used after two calls by voice have not been answered by the Civil Aeronautics Administration airway communications station or when unusual circumstances prevail or during emergencies. For example: A pilot using the Richmond, Virginia radio range who is unable to contact that station by voice, will radiotelegraph the following, using A2 emission: "RW RW RW K". Upon receipt of such a signal, the aircraft communicator at the Richmond radio range station will acknowledge on the voice channel of the radio range as follows: "UNIDENTIFIED AIRCRAFT CALLING RICHMOND RADIO OVER". The pilot then would resume use of voice for completion of the contact unless conditions require continuance of radiotelegraph. It is important that pilots use this procedure only after two unsuccessful attempts by voice to contact Civil Aeronautics Administration airway communications stations.

RADIOTELEPHONE (CALLING PROCEDURE)

When calling Civil Aeronautics Administration stations (except towers) or Army and Navy radio ranges, utilize the call "RADIO". When calling all airport control towers, be they Army, Navy, C.A.A., or municipal, utilize the call "TOWER". When calling Army Airways, utilize the call "ARMY AIRWAYS". Examples:

(a) "Jacksonville Radio This Is Stinson 1234".....When calling a radio range
(b) "Jacksonville Tower This Is Waco 4567".....When calling a control tower
(c) "Jacksonville Army Airways This Is Army 725".....When calling an Army Airways Communications Station
(d) "Langley Army Radio This Is Army 472".....When calling an Army radio range

COMBINED UNITED STATES-BRITISH RADIOTELEPHONE (R/T PROCEDURE)

This new procedure has previously been adopted by the War and Navy Departments for use by military aircraft and became effective June 1, 1943, for use by Civil Aeronautics Administration airway communications stations and airport traffic control towers and civilian aircraft. Military pilots may secure complete information from Army publication FM 24-9. The major changes in procedure are summarized below for the benefit of civilian pilots not having access to FM 24-9.

1. Use of the words "THIS IS" instead of the word "FROM".
2. Use of the word "OVER", instead of the words "GO AHEAD", to indicate, "MY TRANSMISSION IS ENDED AND I EXPECT A RESPONSE FROM YOU".
3. Use of the word "OUT" when conversation is ended and no response is expected.
4. Use of the phrase "SAY AGAIN", instead of the word "REPEAT" when requesting a repetition.
5. Use of the phrase "I SAY AGAIN", instead of the phrase "I WILL REPEAT", when a repetition is being given.

EXAMPLES:

WACO ONE EIGHT ONE FOUR THREE. THIS IS CLEVELAND RADIO OR CLEVELAND TOWER MESSAGE FOR YOU (Optional) OVER.

CLEVELAND RADIO or CLEVELAND TOWER, THIS IS WACO ONE FOUR THREE SEND YOUR MESSAGE (Optional) OVER.

WACO ONE EIGHT ONE FOUR THREE. THIS IS CLEVELAND RADIO or CLEVELAND TOWER (Message) OVER.

CLEVELAND RADIO or CLEVELAND TOWER, THIS IS WACO ONE EIGHT ONE FOUR THREE ROGER OUT.

Pertinent parts of all current publications, including Manual 60, are superseded insofar as communications procedures are concerned by the new procedure indicated above effective October 1945.

AIRPORT DATA
LEGEND

NAME

(Where city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport owned or leased in whole or in part by Army
(CG) Airport owned or leased in whole or in part by Coast Guard
(N) Airport owned or leased in whole or in part by Navy
☆ CAA Intermediate Field
(P) Non-military airport available for use by military aircraft (See Note 3)

N.B. If the airport name is followed by (A) for Army, (N) for Navy, or (CG) for Coast Guard, the field is exclusively an Army, Navy, or Coast Guard field. If the field is not exclusively Army, Navy, or Coast Guard and may be used by civilians, no (A), (N), or (CG) follows the airport name.

SIZE

40: Length of longest landing strip (unpaved) in hundreds of feet
40h: Length of longest hard-surfaced runway in hundreds of feet (Seaplane landing areas over 5 miles in length are classified as unlimited and indicated as "unl.").

CLASS

N.B Only the length of the longest runway is cited, and its direction is not indicated. Space restrictions occasioned this policy, but logic justified it. The logical assumption may be made that runways have been laid out in accordance with the local wind rose. Therefore, in all calms, or gentle-angling winds, or winds aligned with the longest runway, the longest runway will be used. When a wind not aligned with the longest runway is of such intensity that the longest runway cannot be used, this wind makes the use of runway aligned with the wind, even though much shorter than the longest runway, sufficiently long from a safety viewpoint. Too, prior knowledge that there is, for example, a NW SE runway is of little value to a pilot if, when he arrives over the field the wind is blowing too strongly from another direction to use that runway. Finally, the larger the number indicating the longest runway length, the greater is the assurance of a sufficient number of runways for all-wind coverage.

LIGHTS

L Incomplete lighting, either flood or portable runy lights.
L1 Beacon only.
L2 Beacon and boundary.
L3. Beacon, boundary, and obstruction.
L4: Beacon, boundary, obstruction, and flood.
L5: Beacon, boundary, obstruction, flood, and runway contact
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach.
(L5): High intensity runway contact lights
(L6): High intensity instrument approach lights

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel.
S2: Fuel, storage.
S3: Fuel, storage, minor aircraft repairs.
S4: Fuel, storage, minor aircraft, and minor engine repairs.
S5: Fuel, storage, major aircraft, and minor engine repairs.
S6: Fuel, storage, major aircraft, and major engine repairs.

N B Very often small civilian fields (particularly in non-metropolitan areas) will have no full-time attendant. Frequently servicing at such fields in isolated communities is available only by circling the town to attract the operator's attention.
These fields are often recognizable by airport class, comparable to, for example, "1S S1". "1S S1" suggests that the field is not too large, and that the field may not have a full-time attendant even though fuel is stored there.
Lack of radio or lighting facilities, indicated by the absence of an "R" or "L" in the airport class, is a further indication that a full-time attendant may not be available. Absence of an "S" (servicing) indicates definitely that fuel, if available at all, is available only by truck from town. Any field carrying no indication of radio (R), lights (L), or servicing (S) in airport class columns should be used with caution, especially a field of the small category. Fields of this nature may be inactive or not maintained, and thus dangerous for use.

RADIO

R1 Voice availability via tower, range (or homing device), or voice station.
R2: Range (or homing device), and tower
R3: Range (or homing device), tower, and instrument landing system.

NOTES

1. "(NC)" not charted. Indicates not charted because of insufficient data or inability to verify
2. → New or revised data. ☆
3. "(P)" in CITY-AIRPORT NAME column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the United States Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the War Department.
4. "Effingham Int., 10, LS-ID" in CITY-AIRPORT NAME column indicates that the airport is Effingham CAA Intermediate Field, Site 10, on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the CAA are listed similarly except that there is no crossfixed star or "Int.".
5. In Location column, the word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.
6. In Remarks column:
   (a) "91 oct." indicates octane rating of fuel available.
   (b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency
   (c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway.
   (d) "TEMP INACTIVE. NO FACS. (See Special Notice)" indicates AAF airfields used either exclusively by the AAF or municipal airfields used jointly by the AAF and civil interests at which both the Army and the civil interests are inactive. Such airfields are available to military aircraft on official business only under written orders of an airforce, command, or higher authority. (See Special Notice.)
   (e) "ARMY TEMP INACTIVE, CIVIL FACS." indicates municipal airfields used jointly by the AAF and civil interests at which the Army facilities are inactive but civil facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.
   (f) "PRIVATE" indicates field is available for owner only, and not to be used by others except in emergency.
   (g) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines are cited.
   (h) "Fld lgts on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly, the field lights, indicated for such a lighted field (and, in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.
   (i) "FEE" indicates landing fee for private aircraft.
7. Airline stop airport names are capitalized.

LEGEND

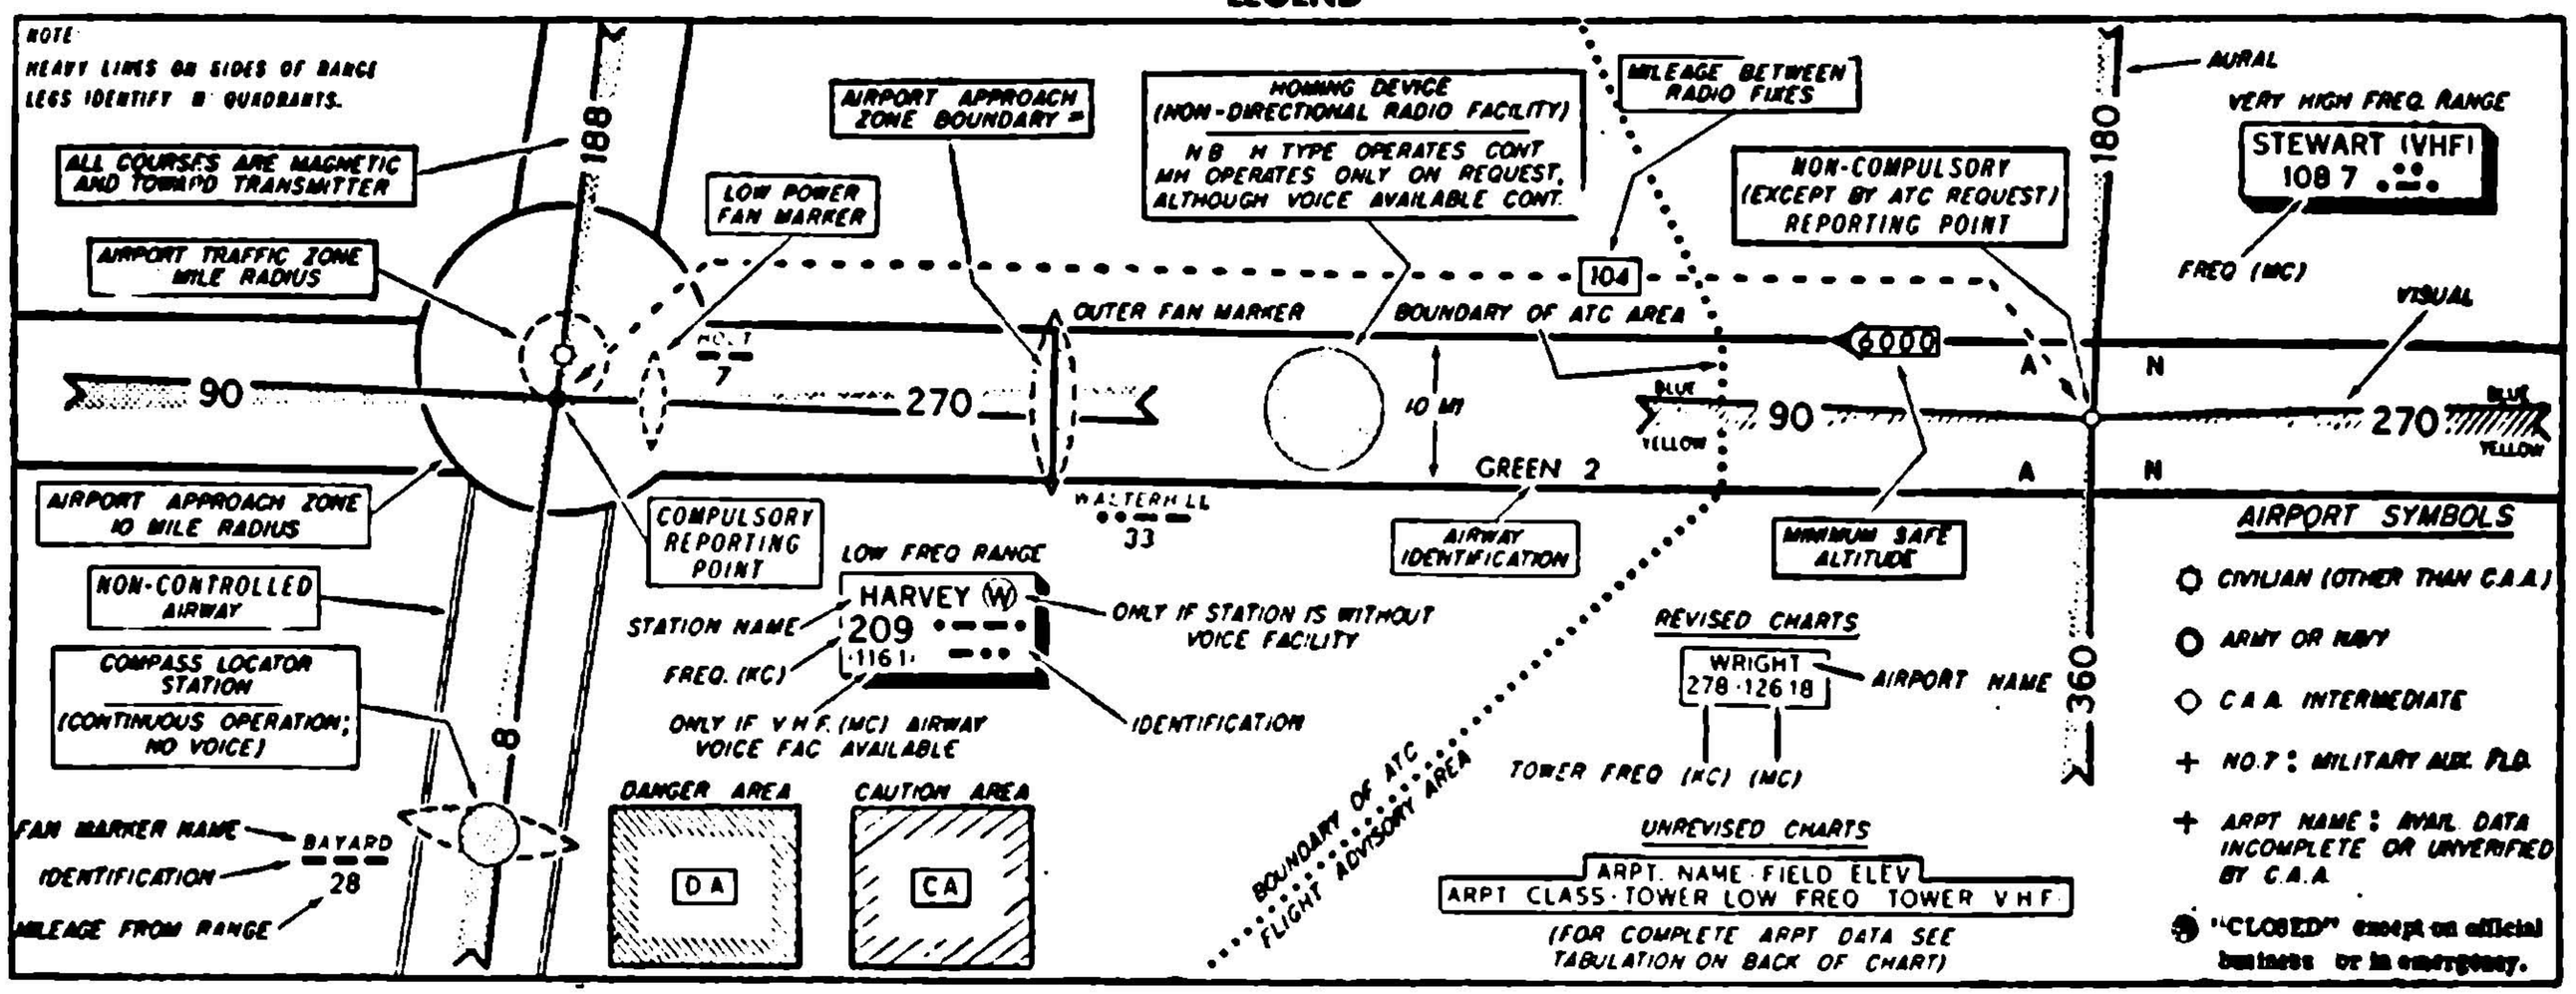

CHART CONTENTS

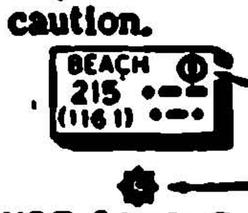
The Flight Planning Charts, in addition to the warning Ⓡ and caution Ⓞ symbols, indicate: (1) all aeronautical radio facilities except air carrier stations; (2) all minimum safe altitudes and fix mileages: (3) all Army and Navy fields and CAA intermediate fields, and all active civilian airports; (4) all danger and caution areas; (5) all designated airways. These charts indicate all facilities, and the current status thereof, on record with the CAA as of 0001 E.S.T. each alternate Tuesday.

CHART PURPOSE & USE

The primary purpose of these charts is to facilitate the planning and execution of cross-country flights. The user should check the charts for the symboled Ⓡ or Ⓞ items between his point of departure and his destination. If there is none, there is no necessity for him to read the Notices to Airmen section as far as temporary items are concerned. As for permanent changes - all major ones, such as new fields, abandoned fields, range frequency changes, etc., are currently reflected on the charts. For record-keeping purposes and for the correction of charts and publications, however, the Notices to Airmen section should be carefully read.

CHART HAZARD SYMBOLS

The current status of facilities and hazards as reported to the CAA is indicated by the symbol system. An airport closed because of construction, an inoperative range, a revised range quadrant identification or range frequency, or course realignment of 20° or more, for example, are indicated by the symbol Ⓡ for red, or warning. An airport under construction but usable, or an inoperative control tower, on the other hand, is indicated by the symbol Ⓞ for orange, or caution.



RADIO FACILITY HAZARDOUS FOR USE (SEE NOTICES TO AIRMEN SECTION)

AIRPORT HAZARDOUS FOR USE (SEE NOTICES TO AIRMEN SECTION)

RANGE COURSE LENGTHS

In general, the length of radio range courses shown herein indicates the approximate location where it is expected that a pilot will tune from one radio range to the next one along his route of flight. Such change-over points, however, are not mandatory, and it is expected that a pilot will use his best judgment in selecting change-over points that will best serve his needs.

Warning

Radio range courses are subject to disturbances that result in multiple courses, and signal fades and surges over rough country. Pilots flying over unfamiliar routes are cautioned to be on the alert to detect these vagaries, particularly over mountainous terrain.

CAUTION- MANY SEAPLANE LANDING AREAS IN THE NORTH ARE CLOSED DURING WINTER MONTHS BECAUSE OF ICE.

OPERATION OF SEAPLANES ON THE NEW YORK STATE CANAL SYSTEM:

AN OFFICIAL COMPLAINT HAS BEEN RECEIVED FROM THE STATE OF NEW YORK, DEPARTMENT OF PUBLIC WORKS, THAT THE NEW YORK STATE CANAL CHANNEL IS BEING USED FOR THE TAKING OFF AND LANDING OF AIRCRAFT. THIS CHANNEL IS VERY NARROW AND HAS NUMEROUS CURVES. AIRCRAFT LANDINGS AND TAKE-OFFS ON THIS CHANNEL, THEREFORE, ARE DANGEROUS AND PRESENT A HAZARD TO CANAL TRAFFIC AND SMALL BOATS. ALL AIRMEN ARE CAUTIONED THAT SUCH ACTIVITIES MAY CONSTITUTE CARELESS OR RECKLESS OPERATION OF AIRCRAFT.

NOTICES TO AIRMEN

INTRODUCTION

PROCEDURAL STATEMENT: The AIRMAN'S GUIDE no longer has a separate section for the DIRECTORY OF AIRPORTS or the AIR NAVIGATION RADIO AIDS. These two sections are now inserted as data pages between the flight planning charts. To retain the 2-page chart flow, however, the data pages are found on the reverse sides of the charts rather than facing them. On the data pages are tabulated all the data covering the facilities charted on the reverse sides and formerly found in the DIRECTORY OF AIRPORTS and AIR NAVIGATION RADIO AIDS sections. To facilitate reference to a particular facility, an Index of Facility Locations with the parenthetical number of the page on which the locale is charted has been added to the revised AIRMAN'S GUIDE, e.g., Chicago (139). On the back of page 139 will be found the Air Navigation Radio Aids and the Directory of Airports data covering Chicago.

Because of the serious paper shortage every means of reducing the Airman's Guide bulk has been investigated. Codification and considerable abbreviation are already being utilized. No material may be deleted, however, in this paper conservation program because surveys have revealed that subscribers consider all parts of the Guide essential. Consequently, about the ultimate step in this bulk-reduction direction has just been taken. The data pages backing the charts now serve, where possible, as notam pages. Resultantly, most of the new data formerly notamized in the Notices to Airmen section with prefixed large stars or double asterisks are no longer carried in that section. Only commissionings, abandonments, or changes so potentially hazardous that they are indicated with (R) (for red flag) symbols on the charts, are now cited in the Notices to Airmen section.

Notamizing on the data pages is effected by the use of prefixed arrows as in the former Air Navigation Radio Aids publication. All changes from the previous issue, whether cited in the Notices to Airmen section or not, are indicated by the prefixed arrows. Following are examples of changes notamized only on the data pages: field obstruction, servicing, elevation, location, and runway length changes. Because of the use of the prefixed arrows as new data indicators, a further innovation had to be adopted. This is a heavy black horizontal line device.

Space below the heavy black horizontal lines on the data pages has been reserved as a supplement for new radio aids and airports whose data were received after the data pages were originally typed. Revisions to existing airports and radio aids are super-imposed on the old data, but new airports and radio aids are listed, necessarily out of alphabetical alignment, below the heavy black horizontal lines until the page is re-typed.

In summation: (a) on the data pages backing the charts, new data or revisions are indicated by arrows; (b) in the Notices to Airmen section, citations covering new or revised radio data are prefixed by one large star "★". Citations covering new or revised airport, or miscellaneous data are prefixed by two asterisks "**".

All temporary conditions (field soft, runway under construction, range course out of alignment, etc) are cited in full until they are no longer in effect. When a citation carries a permanent item and a temporary item, the permanent item is underlined. Parenthetical date at end of item indicates time item was reported.

To conform to chart practice, all facility data are listed in the Notices to Airmen section and on data pages alphabetically by states and by facility name. Thus, an airport will be found listed alphabetically under its own name rather than under its locale's name. If the airport or radio facility name is other than that of the city in which it is located, the location is shown in parenthesis after the facility name.

CIVIL FACILITY DATA: Please advise immediately the Office of Aviation Information, Attention A-250, CAA, Department of Commerce, Washington 25, D. C., whenever temporary conditions covering civilian airports or navigational aids begin or terminate, data revisions are effected, or flight hazards are erected or removed.

SPECIAL NOTICES

ARMY DATA: Advice covering Air Forces Fields or Air Forces Operations on civilian fields, or AAF Radio Facilities, and Danger or Caution Area activation, as well as requests for approval for the closing of any army airfields to transient military aircraft for a period in excess of ten days should be directed to: COMMANDING GENERAL, AIR TRANSPORT COMMAND, WASHINGTON 25, D.C. ATTENTION: HEADQUARTERS FLIGHT SERVICE, FLIGHT OPERATIONS. Information to be published will be coordinated and submitted to the C.A.A.

NAVY FACILITY DATA: In accordance with Hydrographic Office Memorandum for Aviations No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D. C., for transmittal to the Civil Aeronautics Administration. In accordance with Aviation Circular Letter #96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

✓ POLICY ON ARMY USE OF TEMPORARILY INACTIVE ARMY AIR FIELDS: 1. Municipal airfields which have been used jointly by the Army Air Forces and civil interests and at which Army facilities are temporarily inactive but the civil facilities are still active, may continue to be used by military aircraft. No servicing other than that provided by commercial concerns will be available. Such airfields will be identified herein by the following notice: "Army temp inactive - civil facs". 2. Temporarily inactive Army air fields used exclusively by the Army Air Forces (either owned or leased) or municipal airfields used jointly by the Army Air Forces with civil interests at which both Army and civil facilities are inactive will be available to military aircraft on official business only at the discretion of the Commanding Officer of the base to which the aircraft is assigned. Such airfields will be identified herein by the following notice: "Temp inactive - no facs". Above policy statement is not to be construed as countermanding any AAF regulations or letters governing command use of municipal airports or Army airfields.

"OFFICIAL BUSINESS" AS APPLIED TO AAF: The term "official business", within the meaning of AAF Regulation 85-2, is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining aircraft clearance, service, or other items attendant with itinerant operations. Cross country flights for the purpose of maintining flying proficiency are not considered to be official business within the meaning of this regulation.

AIRPORTS AVAILABLE FOR USE BY MILITARY AIRCRAFT: The attention of Army clearance personnel and of Army pilots is invited to provisions of Section III of Army Air Forces Regulation 85-2, which states in part: "The use by Army aircraft of private airports which have not been leased, purchased, or otherwise acquired by the

✓ Indicates new or revised Special Notice.

Federal Government is unauthorized except in case of emergency or for official visits authorized by an Air Force or Command". This Regulation further states "AAF transient itinerant aircraft may utilize: (a) Government or DLA (development landing area) type airports, subject only to such restrictions as may be listed from time to time in Weekly Notice to Airmen . . . (b) Private airports when legal permits for their limited use are procured by, and filed with the real estate agency of the War Department...". Reference to the AAF Installations Directory, and to the Data Pages as well as the Notices to Airmen section of the Airman's Guide should be made in case of doubt as to the proper use of fields. On the Data Pages, all AAF installations are designated by the prefix (A), Navy by (N) and DLA by (P).

CHANGES IN LISTING PROCEDURE FOR ARMY AIR FORCE AIRFIELDS: In an effort to simplify the use of Airman's Guide within the printing limitations imposed by the Government Printing Office, notices on Army airfields that are closed or temporarily inactive or surplus to Army Air Forces will be carried in the Directory of Airports section thereby eliminating the necessity for checking in more than one section to obtain the correct status of an airport. Minor restrictions such as hours of operation, service, and hazards will continue to be listed in the Notices to Airmen section. The following procedure has been placed in effect in this issue:

(a) The term "CLOSED" will be shown in the Directory section only, for all AAF airfields that are closed to all transient traffic except on official business or in emergency. The legend page of the Directory will give such a definition for "CLOSED". Airports that have been declared surplus to the AAF and on which permits have not been issued for civil use or which have not been otherwise disposed of by the W.A.A. will also be listed as "CLOSED".

(b) AAF airfields that now carry notices of "Army temp inactive - civil facs" or "Temp inactive. No facs. (See Special Notice re use)" will now have such citations in the Directory section only.

RESTRICTION ON FLIGHT OF AAF AIRCRAFT IN NEW YORK CITY AREA: No AAF aircraft except those on scheduled transport operations will be cleared to New York City Area unless point of first intended landing is Mitchel Field, Hempstead, L.I., N.Y. When instrument conditions prevail in New York City Area, no Army aircraft except those on scheduled transport operations will land at or take off from other than Mitchel Field. When contact conditions prevail in New York City Area, aircraft which have been cleared for Mitchel Field but which desire to land at other authorized fields in New York City Area will, when approaching New York City Area, obtain clearance from Olmsted Flight Service Center through normal communication means. For purposes of these instructions, New York City Area is defined as a circle 50 miles in diameter centered on southern tip of Manhattan Island. Contact weather New York Area will be considered to be 2000' ceiling, 3 miles visibility, both day and night. When cloud conditions exist below 2000', flight conditions will be considered IFR.

MILITARY AND NAVAL LANDINGS IN NEWFOUNDLAND: All military and naval aircraft landing in Newfoundland should use Harmon Field at Stephenville or Naval Operating Base at Argentia. Gander has very limited military facilities and is reserved for commercial and weather diverted military aircraft.

RESTRICTIONS ON AAF HELICOPTERS: YR-5A, R-5A, YR-5D, R-5D (except as indicated below*) and YR-5E helicopters may be released for flight only upon compliance with TO 01-230 HB-13 and -14.

*R-5D helicopters No. 43-46643 and subsequent have been modified by the contractor and may be released for flights.

ARMY FOREIGN CLEARING STATIONS: Under the authority of AAF Regulation 61-4, Army aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated: AFRICA - Morrison Fld, Fla., Washington National Airport, D.C.; or Westover Field, Mass. ALASKA - McChord Field, Wash.; Great Falls AAF, Mont. BERMUDA - Mitchel Field, N.Y.; Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. CANADA - Great Falls AAF, Mont.; McChord Field, Wash.; Washington National Airport, D.C.; Selfridge Field, Mich.; or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA - March Field, Calif.; Kelly Field, Tex.; or Morrison Field, Fla. CARIBBEAN - Morrison Field, Fla. ENGLAND, GREENLAND, ICELAND, NOVA SCOTIA, NEWFOUNDLAND, AND NORTH IRELAND - Washington National Airport, D.C., and Westover Field, Mass. (Note: Selfridge Field also will clear for Nova Scotia and Newfoundland). HAWAII - Fairfield-Suisun AAF, Calif.

OPERATING PROCEDURE WITH FLIGHT SERVICE UNDER AAF MILITARY FLIGHT SERVICE COMMUNICATIONS SYSTEM (PLAN 62): 1. Departure from AAF Bases. No change. Reference: AAF Regulations 15-23 and 60-22. 2. Departure from non-AAF Bases. AAF aircraft departing from non-AAF bases will file a complete flight plan with, and secure approval from, the nearest Flight Service Center prior to takeoff, or as outlined in AAF Regulation 60-22. Communications with a Flight Service Center may be established by direct telephone to the center; or by a radio call to the nearest AAF Base or AACS airways radio station. In addition to the Flight Service clearance, pilots contemplating flight under Instrument Flight Rule conditions will secure a C.. Airway Traffic Control clearance. The CAA clearance normally can be obtained more rapidly by contacting CAA direct through CAA Communication facilities. If Civil Aeronautics Administration Communication facilities, however, are not available, the C. A. A. clearance may be obtained through Flight Service. 3. Change of Contact Flight Rule (CFR) Flight Plan Enroute. AAF aircraft requiring a change of route or point of first intended landing of a CFR flight plan enroute will contact Flight Service through an AACS Airway radio station or control tower, submit the information required by AAF Regulation 60-22 and, when necessary, secure Flight Service approval. 4. Change of Instrument Flight Rule (IFR) Flight plan, or CFR to IFR, or IFR to CFR enroute. AAF aircraft requiring a change of route, altitude, point of first intended landing, cruising speed or alternate airport, or change from CFR to IFR or IFR to CFR enroute, will contact a CAA communications station for coordination and approval by CAA Airway Traffic Control and Flight Service. If communications with CAA communications station cannot be established, AACS airways radio station will be contacted for coordination and approval by CAA Airway Traffic Control and Flight Service. 5. CFR Position Reports. When flying under CFR conditions, pilots will make position reports, wherever practicable, to AACS Airway radio stations enroute and receive any necessary advisories from Flight Service. 6. IFR Position Reports. When flying under IFR conditions, pilots will first make position reports to CAA communications stations as heretofore required, and will then make position reports to AACS airways radio stations in order that the responsible Flight Service Center may furnish any necessary advisories. 7. Voice Calls. AACS airways radio stations will be called by the location name followed by the word "airways", such as "Boiling Airways". This is distinct from the CAA radio call system which uses the location name followed by the word "radio", such as "Washington Radio". 8. All VHF equipped aircraft will be provided with a card to be prominently mounted near the VHF control box which will specify button, frequency, and service obtainable. An index to AACS airways stations within the U.S., together with a listing of the assigned frequencies, may be found on pages 94 and 95 of TO 08-15-1. The following table displays the channels and frequencies normally used to contact the various communication installations:

Button	Frequency	Service
A	116.10 mc.	CAA-AIRWAYS (RANGE STNS) *AACS Airways (Plan 62)
B	126.18 mc.	CONTROL TOWERS
C	137.88 mc.	AACS AIRWAYS (PLAN 62) *Control towers.
D	140.58 mc.	MILITARY EMERGENCY & GCA FINAL APPROACH CONTROL.

*Available for service indicated on a secondary basis.

9. It will be some time before all AAF aircraft are equipped for operation on AACS Airways frequencies. It is not the intent that pilots flying aircraft not so equipped attempt to make position reports to Flight Service as described above. Emergency Flight Service advisories, however, may be transmitted to such aircraft on the AAF control tower frequency. Aircraft which are equipped for operation on AACS Airways frequencies will contact airways stations whenever possible rather than AAF control towers.

10. The following list of telephone numbers will be used for contacting military Flight Service Centers:

CAA Area	Flight Service Area	Phone No.
Washington Pittsburgh New York Boston	Olmsted Flight Service Center Middletown, Pa.	Steelton 93387 Steelton 93470
Jacksonville Miami	MacDill Flight Service Center Tampa, Fla.	H-4671
Memphis New Orleans Atlanta	Maxwell Flight Service Center Montgomery, Ala.	Montgomery 89
Detroit Cincinnati St. Louis Chicago	Wright Flight Service Center Dayton, Ohio	Osborn 88691, Osborn 88692
Fort Worth San Antonio	Ft.Worth Flight Service Center Fort Worth, Tex.	Fort Worth 77251
Denver Minneapolis Kansas City	Lowry Flight Service Center Denver, Colo.	LD 116 LD 117
Los Angeles Albuquerque El Paso	March Flight Service Center Riverside, Calif.	Riverside 7107 Riverside 7108
Oakland Salt Lake	Hamilton Flight Service Center San Rafael, Calif.	San Rafael 5800 Text 2165 or 2167
Great Falls Seattle	McChord Flight Service Center Tacoma, Wash.	Lakewood 3324

STANDARD NAVY GROUND CONTROL APPROACH FREQUENCY ASSIGNMENTS: Allocations of frequencies, both HF and VHF, for Navy GCA use have been coordinated with the AAF. Universal frequencies allocated primarily for Navy GCA operational use are as follows: HF Communications - 3475,4890,6640 kcs.; VHF Communications - 134.64,142.92,143.64 mcs. As a safety precaution, Navy GCA Units will also be prepared to control aircraft on 140.58 mcs., the Navy emergency frequency. To provide a means whereby Navy aircraft may receive assistance from Army GCA Units and vice-versa, the following agreement will govern: (a) Army GCA Units will at all times be prepared to control Navy Aircraft on 140.58 mcs. (b) Navy GCA Units will be prepared to control AAF aircraft on 140.58 mcs. It is the responsibility of the pilot desiring GCA assistance to establish communication with the appropriate control tower for preliminary approach instructions. The pilot will then be instructed as to the proper frequency for contacting the GCA Unit. Navy GCA Operational Units are located as follows: Whidbey Island NAS, Wash., Charlestown NAAS, R.I.; Oakland NAS, CALIF.; Miramar MCAS, Calif.; Seattle NAS, Wash.; Olathe NAS, Kans.; Oceana NAAS, Va.; Patuxent River NAS, Md.

LORAN DATA: Loran is a long range electronic navigational aid utilizing pulse techniques. It provides accurate fixes for the user within 1 per cent of his distance from the stations. Loran service is provided continuously twenty-four hours a day. Loran operates on fixed frequencies of 1750, 1850 and 1950 kilocycles. To use Loran it is required that a Loran receiver-indicator be employed and that suitable charts and tables be available to the navigator. The following is a list of Coast Guard and Canadian Loran rates presently in operation: Atlantic: 1L-0,1L-1,1L-2,1L-3,1L-4,1L-7;1H-1 1H-2, 1L-1; West Coast U.S.: 2H-4, 2H-5, 2H-2; Aleutian Area: 1L-0, 1L-2; Central and Western Pacific: 2L-0,2L-1,2L-2,2L-3,4H-2,4H-3.4H-4,4H-5,1L-6,1L-7. Information regarding Loran coverage,rates,frequency, etc., throughout the world is contained in the Catalog of Loran Charts and Service Areas, Hydrographic Office Publication No. 1-L. This publication may be obtained from Hydrographic Office agents located in various cities in the United States or from the Hydrographic Office, Washington, D.C., at a cost of 30 cents. Complete Loran tables are contained in Hydrographic Office Publication Series No. 221, which can be obtained from the same sources at a cost of $3.00 per volume. Loran charts may be similarly obtained. Hydrographic Office Circular No. 3 and the Hydrographic Bulletin (issued weekly) give a list of these agents mentioned above and may be obtained without charge from the Hydrographic Office or any Branch Hydrographic Office. Information on changes or interruptions in Loran service of a temporary nature is sent to CAA for dissemination. Inquiries of an operational nature regarding Loran may be addressed to the Commandant (OAN), U.S. Coast Guard, 1300 E Street,N.W. Washington, D. C.

FOREIGN ENTRY PROCEDURES: Every U.S. citizen traveling abroad, except to Canada, Mexico, Alaska, Hawaii, Puerto Rico, and the Virgin Islands, requires a passport. The following procedures are necessary in order to gain entry, with intention to land, in Canada and Mexico:

CANADA: 1. All departures from the U.S. must be made from Airports of Entry (see next item). 2. If landing is to be made at a designated Canadian Airport of Entry, notice should be telephoned or telegraphed to the collector of customs at the predetermined point of entry when clearing U.S. Customs. 3. If entry is planned at a field other than a customs airport, arrangements should be made with the Secretary, Customs Division, Department of National Revenue, Ottawa, at least 10 days in advance. 4. Pilots and aircraft must be properly certificated and general observance of Canadian air regulations is required. 5. The following is a list of all Canadian Customs Airports of Entry: Whitehorse, Y.T.; Vancouver, B.C.; Calgary, Alta.; Lethbridge, Alta.; Moose Jaw, Sask.; Winnipeg, Man.; Ottawa, Ont. (Island or Malton); Hamilton, Ont.; Windsor, Ont.; Montreal, P.Q. (Dorval); Fredericton, N.B.; St. John, N.B.; Regina, Sask.

MEXICO: Applications for permits may be filed with the nearest Mexican consul who charges a fee of $4.00, or directly with the Department of Civil Aeronautics, Mexico City, Mexico, without charge. The permit will be sent directly to the Airport of Entry named in the application, unless the applicant specifically requests that it be sent to his home address. If entry is to be made from Brownsville, Tex., permission may be received from Representative of Mexican Ministry of Communication and Public Works, Department of Civil Aeronautics, Rio Grande Valley International Airport, Brownsville, Texas. All departures from the U.S. must be made from Airports of Entry. (see next item).

AIRPORTS OF ENTRY: Customs clearance into or out of the U.S. must be secured at Airports of Entry. Since there is insufficient traffic at most of these fields to justify resident customs personnel, advance notice must be sent to the Deputy Collector of Customs of the city in which the Airport of Entry to be used is located. The notice should state the day and approximate hour of exit or entry. Following are the Airports of Entry: International Arpt, Douglas, Ariz.; Nogales International Arpt, Ariz.; Calexico, Arpt, Calif.; Lindbergh Field, San Diego, Calif.; Meacham Fld, Key West, Fla.; Dinner Key Seaplane Base, Miami, Fla.; Miami International Arpt, Fla.; Midet Seaplane Base, West Palm Beach, Fla.; Caribou Arpt, Me.; Presque Isle Arpt, Me.; Detroit City Arpt., Mich.; Romulus AAF, Mich.; Sault Ste Marie Arpt, Mich.; Williamson-Johnson Fld, Duluth, Minn.; Duluth Boat Club Seaplane Base, Minn.; Cut Bank Airport, Mont.;

Great Falls Arpt, Mont.; Havre City-County Arpt, Mont.; Albany Arpt, N.Y.; Buffalo Arpt, N.Y.; Malone-Dufort Arpt, N.Y.; Massena Arpt, N.Y.; Ogdensburg Arpt, N.Y.; Ogdensburg Seaplane Base, N.Y.; Rochester Arpt, N.Y.; Rouses Point Seaplane Base, N.Y.; Watertown Arpt, N.Y.; Grand Forks Arpt, N.D.; Pembina Arpt, N.D.; Portal Arpt, N.D.; Cleveland Arpt, Ohio; Hinde Arpt, Sandusky, Ohio; Put-In-Bay Arpt,Ohio; Eagle Pass Arpt, Tex.; El Paso Arpt, Tex.; International Arpt, Brownsville, Tex.; Warren R. Austin Arpt, Swanton, Vt.; Bellingham Arpt, Wash.; Burlington Arpt, Vt.; City-County Arpt, Port Townsend, Wash.; Felts Fld, Spokane, Wash.; King County Arpt-Boeing Field, Seattle, Wash.; Lake Union Seaplane Base, Seattle, Wash.

CUSTOMS REPORTS: In making flights TO or FROM a foreign country, civil fliers are required to report to a customs officer. If they do not report, they are subject to a civil penalty of $500.00 for each violation, and any aircraft used in connection with any such violation is subject to seizure and forfeiture, as provided for in the customs laws. On flights from foreign territory, the first landing in the United States is required to be made at an Airport of Entry, unless permission to land elsewhere than at an airport of entry is granted by the Commissioner of Customs, Washington 25, D.C. Consult the nearest customs officer before making foreign flights.

U .S. CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES: Although the CAA does not require special permission for the flight of U.S. aircraft abroad, or for the delivery of aircraft exported to foreign countries all aircraft must be registered and certificated as to airworthiness, and pilots must hold appropriate U.S. pilot certificates. The single exception to the above is: Special permission must be obtained from the Director, Aircraft and Components Service, CAA, Washington, D.C., for any flight into or through the Panama Canal Zone. In general, permission must be secured from foreign countries for the conduct of scheduled or non-scheduled operations from the U.S. Specific information may be secured from the Aviation Division, State Department. All air carriers must secure operating certificates from the CAA and their operations must be in conformance with these certificates. Although there are no Federal taxes on the exportation of aircraft from the U.S., it is mandatory that a license for such export be obtained from the State Department.

CANADIAN REGULATIONS FOR CFR FLIGHTS: (a) It is compulsory for pilots desiring to conduct a CFR flight to file a flight plan unless the flight will be made within a radius of 25 miles of the point of departure. (b) Arrival messages must be filed by pilot on all such CFR flights.

CANADIAN INSTRUMENT FLIGHT RULE FLIGHT: Pilots are cautioned to conform to the requirements of CAR 60.2 where flight is proposed to be conducted under Instrument Flight Rules from the United States into air traffic control areas designated in Canada. Failure to adhere to these regulations may result in detention of pilots concerned by Canadian Authorities.

PANAMA CANAL ZONE, FLIGHT INTO: Prior to take-off from any aerial port of embarkation of any aircraft flight into, or through, the 200 mile area blanketing the Canal Zone, Commanders of Military Aircraft will notify the CG 6th Fighter Wing, Attention: Fighter Controller, by an information copy of their flight plans. With a view to safety and protection of their equipment and personnel, operators of all other aircraft should follow the same procedure. Responsibility for this notification of flight plans lies with the operator, but notification will normally be transmitted by the clearance authority at the point of departure.

SAN JUAN, P.R., PRE-FLIGHT CLEARANCES: The Isla Grande Airport at San Juan, Puerto Rico, is a part of the U.S. Naval Air Station, San Juan. Commercial air carriers may not operate at this field without receiving specific authorization from the Chief of Naval Operations, Washington, D.C. The Commanding Officer NAS, San Juan, may grant permission for one or two isolated landings. In any case, proper authority must be obtained prior to landing at San Juan. Privately owned aircraft in a ferry status must obtain permission from the commanding officer before landing at Isla Grand Airport.

CARIBBEAN AREA-RADIOBEACONS FOR USE WITH ADF: The following Coast Guard Radiobeacons now operate continuously in their assigned sequence, i.e., one minute on, two minutes off, 24 hours daily:

II San Juan 296 . - . . Lat 18-24-14 N, Long. 66-07-03 W
I Goat Island (Jamaica) 304 . . - . Lat 17-53-00, Long. 77-04-14 W
I Trinidad 308 - - - . Lat 10-41-23 N, Long. 61-44-44 W

It is requested that all ships and aircraft using these beacons submit comments to the Commander, 10th Coast Guard District, Arsenal, Marina, San Juan, P.R., as to usefulness with ADF equipment, bearing accuracy obtainable, maximum usable range, ease of identification, etc.

✓ DISCONTINUANCE OF CERTAIN OR ALL OPERATIONS AT CAA COMMUNICATIONS STATIONS: (A) The following communications stns will discont. or have discont. operations (all voice or code communications, weather reporting service, radio receiving watches), except radio range or homing facilities (all H and MH facilities will operate continuously without voice), on the following dates:

McCool, Ind., 12-28-46; Houlton, Me., 1-12-47; Lebanon, N.H., 1-12-47; Dansville, N. Y., 1-12-47; Dunkirk, N. Y., 1-12-47; Glens Falls, N. Y., 1-12-47; Ashley, N.D., 12-28-46; Arenbold, Ohio, 12-28-46; Brookville, Pa., 1-12-47; Sunbury,Pa., 1-12-47; Wilkes Barre, Pa., 1-12-47; Providence, R.I., 1-12-47; Alice, Tex.,12-18-46; Clarendon, Tex., 12-18-46; Palacios, Tex., 12-18-46; Yoakum, Tex., 12-18-46; Danville, Va., 1-12-47; Montpelier, Vt., 1-12-47

(B) The following CAA Communications Stns will be shut down or have shut down and all facilities discontinued on the following dates:

Evergreen, Ala., 12-15-46; Strevell, Idaho, 12-15-46; Milroy, Ind., 12-28-46; Lamoni, Iowa (T), 1-1-47; Montezuma, Iowa, 1-1-47; Cassoday, Kans., 1-1-47; Coffeyville, Kans., 1-1-47; Warsaw, Ky. 12-28-46; Cadillac, Mich., 12-28-46; St.Ignace, Mich., 12-28-46; Lake City, Minn., 12-28-46; Big Spring, Nebr., 1-1-47; Overton, Nebr., 1 -1-47; Anton Chico, N. Mex., 12-18-46; Socorro, N.M., 12-28-46; Golva, N.D.,12-28-46; Cherry Fork, Ohio, 12-28-46; Port Clinton, Ohio, 12-28-46; Anderson, S.C., 12-15-46; Lane, S.C., 12-15-46; Philip, S.D., 1-1-47; Spearfish, S.D., 1-1-47; Navasota, Tex.,12-18-46; Sulphur Springs, Tex., 12-18-46; Stevenson, Wash., 12-9-46.

N.B. Weather teletype reports will continue to be available at the following stations from Weather Bureau personnel: Stevenson, Wash.; Anniston, Ala.

GUARDING OF 3117.5 KCS BY CAA AIRWAY COMMUNICATIONS STATIONS: All airway communications stations located at points also served by CAA airport traffic control towers discontinued continuous listening watches on 3117.5 kcs. Hereafter, communications stations at these locations will establish watches on 3117.5 kcs. upon "request" and during such hours as the associated tower is closed.

NEW PRIVATE FLIER FREQUENCIES: About Jan. 1, 1947, or shortly thereafter all CAA Communications Stations will begin to guard 122.1 mcs and CAA operated towers 122.5 mcs. These are the new frequencies assigned for private fliers' use for air/ground communications. Jan. 1, 1947, the guard on 131.9 and 131.7 mcs will be discontinued.

PRE-FLIGHT SERVICE: Pilots desiring to file flight plans are requested to do so with any CAA Airway Communications Station by personally visiting the station or by telephone. Radio should be used for filing flight plans only as a last resort. Pilots are urged to visit communications station to obtain authentic flight information and assistance in planning their flights. Personnel at these stations are trained to render flight planning assistance. An objective of CAA pre-flight service is to encourage pilots to familiarize themselves with flight conditions prior to commencing cross country flight.

NEW YORK OCEANIC AIR TRAFFIC CONTROL PROCEDURES: For the information of those agencies intending trans-oceanic operations in the New York Oceanic Control Area and which are not in possession of PICAO manuals for procedures the following is promulgated: The New York Oceanic Airway Traffic Control Area has been activated in accordance with PICAO directives and New York Oceanic Traffic Control Operations Letter No. 1.

This area is bounded on the N by the 43rd parallel, on the E by the 45th meridian, on the S by the 30th parallel, on the W by a line paralleling the E Coast of the U.S. 100 nautical miles off-shore.

All aircraft operating therein must do so under an approved instrument flight plan, the composition of which follows: aircraft registration, aircraft radio call, type of aircraft, person in command, point of departure, cruising altitude, route of flight, point of first intended landing, proposed true airspeed, transmitting and receiving frequencies, proposed or actual departure time, estimated elapsed time to arrival point, alternate airdrome, amount of fuel in pounds, any other pertinent data deemed necessary for control purposes. Flight plans shall be addressed to New York Ocean Control (preferably through WSY, New York) prior to entering this area.

Position reports transmitted by radiotelegraphy will be composed in the following abbreviated form: the position will be determined as soon as practicable after the first hour of flight and each hour thereafter, and the reports transmitted to the ground station at the earliest opportunity. Standard position reports shall be in the following form: U G G G G Q L L L L Long Long Long Long PD Fox Charlie Tare 1 Tare 2 Tare 3 and Sugar 1 Sugar 2 Sugar 3 How 1 How 2 How 3 Fox 1 Fox 2 Fox 3 Fox 4 Fox 5.

Position report code Uncle, indication by one figure of the system of units utilized according to the following: zero for metric system five for English system. George indication of time given in hour figures based on GMT. Queen indication by one figure of octane in which aircraft is situated according to the following: N lat zero equals 0° to 90°; W one equals 90° W to 180°; two equals 180° to 90° E; three equals 90° E to 0°; S lat. five equals 0° to 90° W; six equals 90° W to 180°; seven equals 180° to 90° E; eight equals 90° E to 0°. Love indication of lat. in four figures (degrees and minutes); long. indication of longitude in four figures (degrees and minutes) dropping hundredths degrees. Peter Dog indication by one figure of means used to determine the position according to the following: one equals dead reckoning; two equals single position line; three single radio bearing position line; four equals radio fix; five equals celestial fix; six equals visual or ground fix; seven equals Loran or console fix; eight equals radar fix George Easy. Easy; nine equals celestial and radio fix. Fox Charlie indication by one figure, flight conditions according to the following: zero equals visual flight rule at all levels; one equals visual flight low clouds; two equals on top; three equals between layers; four equals medium icing; five equals heavy icing; six equals in and out of clouds twenty five percent IFR; seven equals ditto fifty per cent IFR; eight equals in and out of clouds seventy-five per cent IFR; nine equals continuous IFR. Tare one, tare two, tare three indication of true track in degrees given in three figures. Tare one equals hundredths; tare two equals tenths; tare three equals single unit. Sugar one, sugar two, sugar three indication of ground speed in three figures, sugar one in hundredths; sugar two equals tenths; sugar three equals single unit. How one, How two, How three indication of altitude in three figures. How one equals ten thousands of feet or thousands of meters; How two equals thousands of feet or hundreds of meters; How three equals hundreds of feet or tenths of meters. Fox one, Fox two, Fox three, Fox four, Fox five weight of fuel used given in five figures. Fox one equals ten thousands; Fox two thousands; Fox three hundredths; Fox four equals tenths. Fox five equals single units. Units to be used ground speed; metric system kilometers per hour, English system knots; altitude: metric system tenths of meters, English system hundreds of feet; weight of fuel; English system pounds.

Example message: "Zero one four one five zero three zero four five five three three zero seven two two nine zero three two five one two five zero two four five zero" meaning "at one four one five GMT, position lat. thirty degrees forty five minutes N, long. 53° 30' W Loran or Console determined position - on top - true track 290° - groundspeed 325 M.P.H. - altitude 12,500' - weight of fuel used 2450 lbs."

Position reports should be addressed to New York Ocean Control. Position reports transmitted by radio telegraphy should be directed to WSY if possible. If military aircraft are not equipped to transmit on PICAO frequencies to give their position, reports will be directed to a military air/ground station suitably equipped to relay messages to New York Ocean Control. Publications outlining PICAO procedures for air navigation services are available in Publications and Document Section, Dominion Square Building, Montreal, Canada. New York Oceanic Traffic Control Operations Letter No.1, available New York Airway Traffic Control Center, La Guardia Field.

All flights operating in the New York Oceanic Control Area will be cleared at the following altitudes: Magnetic headings of from 0° to and including 179°, odd thousand foot levels. Magnetic headings of from 180° to and including 359°, even thousand foot levels.

NEW YORK OVERSEAS FOREIGN AERONAUTICAL STATION: Effective Dec. 4, 1946, the broadcast of navigation reports by WSY changed times of transmission and added the frequencies as follows: at 0200, 0400, 0600, 0800, 1000 and 1200 GMT broadcast is made simultaneously on 3380, 8720 and 12395 kcs. At 1400, 1600, 1800, 2000, 2200, and 2400 GMT, broadcast will be made simultaneously on 3380, 5960, 8720, 12395 and 16250 kcs. Form and contents of broadcast remain unchanged. Concurrently, the hourly metar and notam broadcast are transmitted at 55 minutes past each hour between the hours of 0055 through 1155 GMT on 3380, 8720, and 12395 kcs. and between the hours of 1255 and 2355 GMT on 3380, 5960, 8720, 12395, and 16250 kcs. Contents of the metar and notam broadcast remain unchanged. The broadcast at 25 minutes past each hour was discontinued. Comments concerning the effectiveness of the above services will be appreciated.

AIRPORT APPROACH ZONES AND AIRPORT TRAFFIC ZONES CFR MINIMA: Part 60 specifies that CFR traffic within Airport Traffic Zones or Airport Approach Zones must maintain 500' vertical and 2000' horizontal separation from the clouds unless given traffic clearance by the control tower or control center concerned. Even under such clearance CFR flights must remain clear of clouds. These airport traffic zones and airport approach zones are indicated on the Flight Planning Charts of the Airman's Guide, and all recently revised Coast and Geodetic Survey Aeronautical Charts. In the interest of safety CFR flights must maintain the 500' and 2000' minima specified above while in these circular charted zones. (See page VIII of this publication for air traffic control procedures and weather minima).

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded. To reduce the number of such complaints, it is requested that the following practices be put into effect by all fliers:

1. Discontinue all unnecessary low flying.
2. When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas.
3. Re-route channels of approach and departure to avoid residential and business districts whenever possible.
4. If the airport is located near inhabited areas, reduce power and increase pitch

of propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum.

5. Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

CIVIL USAGE OF MILITARY FIELDS: Army and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

PERSONAL POSSESSION OF PILOT CERTIFICATES: Effective Feb. 15, 1947, Part 43.400 of the Civil Air Regulations will be amended to read as follows: 43.400 Pilot Certificates. No person shall pilot a civil aircraft within the United States unless he holds a valid pilot certificate with appropriate ratings issued by the Administrator or an appropriate and valid foreign pilot certificate. Such certificate shall be in the personal possession of the pilot at all times while piloting aircraft and shall be presented for examination to any inspector of the Administration or State or local law enforcement officer upon the request of such inspector or enforcement officer.

LOW FLIGHT OVER FUR RANCHES: Numerous complaints have been received regarding low flying over fur ranches. This low flying, especially during mating season, has resulted in very definite dollar and cents losses to fur breeders. They request that pilots avoid flying over their ranches, particularly at low altitudes, stating that the ranches can be identified by the large number of small animal inclosures or pens.

LONG DISTANCE DOMESTIC SCHEDULED AIR CARRIER OPERATIONS: Special Civil Air Regulation 361-A has been amended by extending it until June 15, 1947. The Regulation follows: Flights of scheduled air carriers while at altitudes in excess of 12,500' above sea level E of long. 100° W and 14,500' above sea level W of long. 100° W shall comply with the applicable provisions of the Civil Air Regulations except as follows:

(a) Such flights need not comply with the requirements of Part 60.22 Right-side traffic, Part 61.731 Deviation from Airway, or any other sections of Parts 40 and 61 concerning civil airways.

(b) Such flights need not comply with the requirements of Part 60.252 Traffic clearance, Part 60.253 Communication contacts, and Part 61.602(c) Weather Reports, except to the extent which the Administrator may prescribe.

(c) Each first pilot engaged in these operations shall be qualified for the route if he is qualified for operations over any regular authorized route for the air carrier involved between the regular terminals for such operation.

(d) Each dispatcher who dispatches aircraft on flights authorized by this regulation shall be qualified under Part 61.533 of the Civil Air Regulations for operation over an authorized route for the air carrier involved between the regular terminals of such operations: Provided, that when he is qualified only on a portion of such route he may dispatch aircraft only after coordinating the dispatch with dispatchers who are qualified for the other portions of the route between the points to be served.

✓ IFR CLEARANCE OF ARMY AIRCRAFT: Except as outlined below, no Army aircraft will be cleared for instrument flight unless such aircraft is equipped with a low frequency radio receiver capable of reception in the 200 to 400 kc band. The BC-1206 (Detrola) receiver is not considered adequate as regards compliance with this directive. Aircraft not so equipped may be permitted to clear under IFR when the instrument type clearance is necessitated by reduced local visibility caused by fog, smoke, or haze, or when the flight will not be conducted under conditions which will require navigation by radio.

✓ EDMONTON AIR TRAFFIC CONTROL AREA: Effective Nov. 15, 1946, the Edmonton Air Traffic Control Area was amended as follows: Under paragraph 1(b), substitute the following: Those portions of Amber No. 2 from the U.S.-Canadian Border to 25 mi. NW of Whitecourt, Alta., range.

✓ NORTH ATLANTIC OCEAN STATION VESSELS: Coast Guard advises VHF guard on board North Atlantic Ocean station vessels will be changed from 116.1 to 140.58 mcs. effective 0001Z January 15, 1947.

✓ EXCHANGE OF CERTIFICATES: Effective Dec. 24, 1946, Part 20.55 of the Civil Air Regulations was amended to the following: "A private or commercial pilot certificate which was effective on or after Jan. 1, 1942, and which was issued prior to July 1, 1945, will expire on July 1, 1947. Such certificate may be exchanged at any time prior to July 1, 1947, for a pilot certificate and the appropriate ratings provided for in this Part".

✓ DIFFERENTIATION OF NUMBERS ON PARTS 04: Since the Board on Nov. 9, 1945, adopted an entirely new Part 04 of the Civil Air Regulations, and inasmuch as the previous Part 04 will remain effective indefinitely for certain aircraft, some confusion is possible in differentiating the two parts when these parts are referred to merely by their number. THEREFORE, effective Nov. 22, 1946, Part 04 of the Civil Air Regulations as promulgated on November 9, 1945, was amended by changing the number of the Part from 04 to 04b and by altering accordingly all sections contained therein.

✓ AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (a) Correct Decker's Airport Guide, Page 64 of Zone 5, by deleting all reference to servicing and civilian availability. The field is closed to all fliers.

(b) Correct TO-08-15-1, Chart 63, by showing the South Plains AAF, Texas Tower guarding 3105,3117.5,4495,6210 kcs., and having aircraft fuel available: A, B, C, and J; Chart 99, by deleting operation of radar beacon at Clovis AAF, New Mex.; Chart 62, by changing elevation of Pyote AAF, Texas to 2612'; Chart 58, by showing Selma, Ala., Craig Field, Direction Finder Station inoperative; Pages 17 and 95, by showing air/ground inoperative on all freqs at Rapid City AAF, S. Dak.

(c) Correct aeronautical charts to show 269 kcs. as the transmitting frequency of the Bridgeport, Conn. control tower; Birmingham Sectional Aeronautical Chart, dated Oct. 2, 1946, by deleting the Fairburn, Ga. (auxiliary symbol) Airport at lat. 33°33', long. 84°38'.

(d) Correct TO-08-15-1, Page 95, by showing air to ground frequency of 4495 kcs CW in operation at Medford AAF, Oreg. in addition to other published freqs.

WEATHER REPORTING SERVICE

Weather Reporting Station	Type of Station		Effective Date
Fort Wayne, Ind. (Baer Field)	SW	Closed	
Anton Chico, N. Mex.	Hourly	Closed	12-17-46
Yoakum, Tex.	Hourly	Closed	12-17-46

Ainsworth, Nebr. (AAF)	Hourly	Reestab.	N42° 34' W99° 59'	2580'	

Note: Supplementary weather, in lieu of hourly reports, now available from Spearfish, S. Dak.

Airway terminal forecasts soon to be available for Ypsilanti, Mich., (Willow Run Airport).

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporarily inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide", full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids. These teletype notams are posted in CAA Communications Stations and in all Army Air Field and Naval Air Station Operations Offices having teletype drops.

N.B. AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off. (b) Planes without receivers, when approaching tower-controlled fields and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AAF Regulation 100-4, dated March 4, 1944, and CAR Digest or Manual 60). (c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons coupled with flashing red code lights, indicate suspension of CFR traffic.

AIR NAVIGATION AID DATA

All radio facilities except towers are C.A.A. facilities unless otherwise cited. All towers are listed by operating agency. All range bearings are magnetic inbearings. All fan markers and station location markers operate on 75 mcs. All radio facilities operate continuously unless otherwise specified.

LEGEND

** - New or revised airport, danger area, or miscellaneous data to be inscribed on charts or added to records.

★ - New or revised radio data to be inscribed on charts or added to records.

BIRMINGHAM ARPT-Closed to civil. acft not equipped with operating rcvr. No landings on sodded areas. Ctn ngts or under IFR, plant Sch fld has long taxi and parking strips resembling rnwys. No svcg mil acft 2200 to 0600. No maintenance. (10-9)

BROOKLEY FLD (MOBILE)-RADIO: Army DF stn inop. (12-9) FLD: Soft-use rnwys, taxi strips only. No 91 oct. (10-4)

CAMP SIBERT AAF (ATTALLA)-CLOSED TO ALL ACFT.

CENTRE ARPT-Avail. lgt acft only in wet weather. (12-16)

CHASTAIN'S ARPT (PRICHARD)-2600' of E/W strip avail., mrkd. (11-2)

COLUMBIANA ARPT-N end strip rough, rocky. (12-16)

CRAIG FLD (SELMA)-RADIO: Army DF stn inop. (12-20) FLD: Bndry lgts inop. (11-12)

DANNELLY FLD (MONTGOMERY)-NE taxi strip closed (parked acft)(8-12)

**DECATUR ARPT-ABANDONED. (4 mi. WNW)(12-3)

GUNTER FIELD (MONTGOMERY)-Use rnwys only. Sod areas adj rnwys and taxi strips soft. (11-20)

HARTSELLE ARPT-Graded area rough-use E side of strip. (12-3)

HUNTSVILLE-Bombing and mortar firing is being conducted within the following described area: beginning at the Tennessee River Channel at lat 34-34-30, long 86-44; due N to Southern RR; easterly along RR to long. 86-42; due S to said river; SW along river to point of beginning.

MAXWELL FLD (MONTGOMERY)-At ngt or under IFR conditions large depot 1 mi S looks like arpt and lgts give impression of parallel rnwys. (10-17)

MUSCLE SHOALS ARPT-Fuel avail. civil. acft only. (8-1)

NAPIER FLD (DOTHAN)-Avail. civil. acft in emerg. only. (8-6)

TUSCALOOSA ARPT, SITE 59, FV-AG-Extreme NW end fld soft in wet weather. (12-2)

TUSKEGEE AAF-Closed-emerg. use only.

TUSKEGEE INSTITUTE FLD NO. 1 (TUSKEGEE)-Soft spots after heavy rains. (11-2)

[redacted]

ASHFORK INT, SITE 36A, LA-AQ-Rough. (9-19)

COCHISE INT, SITE T-3, PH-EO-Rough. Tall grass in spots on fld. Ctn when landing and taxiing. (9-20)

COOLIDGE ARPT-Closed-emerg use only.

DAVIS-MONTHAN FLD (TUCSON)-E fld closed-acft parked on rnwys. Blinding ceilometer projector W end fld half way between ends of NW/SE, E/W rnwys. Rnwy 17-35 closed. (11-27)

DEEP LAKE INT, SITE 54A, LA-AQ-Soft. E end E/W, N end N/S stripe rough. Equip. on fld days. (11-11)

ECHEVERRIA FLD (WICKENBURG)-Use rnwys only (parked acft)

ERNEST A. LOVE ARPT (PRESCOTT)-Use wind tee SW of apron. (9-20)

FALCON FLD (MESA)-Closed to trans acft-no facs(9-19)

FLY FLD (YUMA)-800' traffic pattern all rnwys. Avoid local traffic days. Parking rstd to W side of fld. Bcn inop. (1-5)

FREDONIA ARPT-High weeds, cattle on strips. (9-3)

GILA BEND AAF-Tetrahedron inop. (8-26)

HOLBROOK MUN. ARPT (HOLBROOK)-CLOSED (rough). (6-13)

INTERNATIONAL ARPT (DOUGLAS)-Temp closed (const)(6-17)

KINGMAN ARPT-No inst flights cleared to Kingman. No obst lgts atop Hualpai Mtn (8500' MSL) 11 mi S. Rnwy lgts Rnwy 17-35 inop. (7-12)

LITCHFIELD PARK NAF-No landings permitted later than one half hr before sunset without prior approval from CO. (9-19)

**LUKE FLD (PHOENIX)-RADIO: Army twr discont. (1-3) Army air to ground stn in oper on VHF only. (11-25) FLD: Traffic direction indicator on second hangar from N. 11 flash. bcns on White Tank Mtns W of fld discont. (11-18)

ARIZONA

MARANA AAF-CLOSED (9-9)
NOGALES INTERNATIONAL ARPT (NOGALES)-Use only NE/SW paved rnwy, N/S turf strip and paved taxiways. Bal fld soft and rough due to heavy rains and erosion. (10-11)
PHOENIX-Inst train. on Phoenix Range between 5500' and 9500'.
RYAN FLD (TUCSON)-Use rnwys only, bal fld soft in wet weather, parked acft. Washes N edge. (8-8)
SKY HARBOR ARPT (PHOENIX)-Const in area E of N/S and S of E/W rnwys. (10-23)
TH U NDERBIRD ARPT NO. 2 (PHOENIX)-Use strips only (parked acft)
TUCSON ARPT-Trans acft desiring to use fld after 2100 will give 2 hrs advance notice in order that lgts may be turned only. (11-13)
WILLIAMS FLD (CHANDLER)-Use rnwys only.
WINSLOW ARPT-RADIO: CAA twr will be discont about Feb. 1. (1-6)
FLD: E end E/W taxi strip beyond first tie-in closed. (10-31)

ARKANSAS

ADAMS FLD (LTTLE ROCK)-Use rnwys only-shoulders soft. Equip. on fld. Closed to trans mil acft 1800 to 0800. (11-6)
EL DORADO-RADIO: VHF range will be comm soon at lat 33-17-00, long. 92-46-00. Freq. 109.1 mcs, ident. "LD" (. - . . - . .) Visual courses: 45°,225°; aural courses: 135°,315°, courses mag, towards sta. Mag var: 7° E. Stn class: VARW. (12-9)
EL DORADO ARPT-GOODWIN FLD (EL DORADO)-Lgts avail. emerg only. (9-17)
FORT SMITH ARPT-Taxi strips connecting E/W rnwy with Admin Bldg closed to all acft of 5000 lbs or more. (12-28)
GRIDER FLD (PINE BLUFF)-Use strips only (parked acft). Closed ngts. (6-7)
HELENA-Two unlgtd 405' twrs crossing Miss. River at S edge City. (11-7)
JONESBORO ARPT-Use rnwys only. (8-16)
LITTLE ROCK-RADIO: Effective Dec. 29, stn guards 3117.5 kcs. 2300 to 0700.
LUXORA INT, SITE 39, NO-LS-30' unlgtd pole line being erected S end N/S rnwy. (9-27)
McGEHEE ARPT-Cattle on fld intmtly. (9-6)
McLAUGHLIN ARPT (HOT SPRINGS)-RADIO: Mobile Army twr transmits on 4420 kcs and receives on 4495 kcs only. (9-11) FLD: Use ctn when landing and taking off. Crash and fire fighting equip. avail. 0900 to 1700 Mon thru Fri. (12-12)
PINE BLUFF-RADIO: Operating on an exper status only, because of no facs to control or monitor range. Lat. 34-14-48, long. 91-55-36. Freq. 108.7 mcs. Ident. "PL". Visual courses: 13°, 193°, aural courses: 103°, 283°. Stn class: VARW Mag. var. 7°E.
THOMPSON-ROBBINS FLD (HELENA)-Use rnwys only (parked acft).
WALNUT RIDGE ARPT-Acft parked all areas fld and ramp. Use rnwys only. Equip. on fld. Closed 1730 to 0800. NE/SW rnwy closed. (11-21)

CALIFORNIA

ALAMELA NAS-Maintain high approach on Rnwys 26L and 22. Heavy acft parked these areas. 175' unlgtd cranes 2000' from NE corner fld-ctn ngts and during low visibility. Lgtd dredge and pipe extending to shore operating 1/2 mi S of lagoon in seadrome. Equip. adj to and on rnwys. Fld on positive control. (8-16)
AMERICAN LEGION ARPT (SALINAS)-CLOSED. (12-5)
ARCATA ARPT-Closed to acft without 2-way radio unless prior approval received from Stn Director. Incoming acft must file flight plan. Use surfaced areas only. (10-2)
AUBURN PEAK BCN SITE 103 MI BLINKER, SF-SL-Will be perm discont soon. (11-22)
★BAKERSFIELD-KERN CO. ARPT-RADIO: CAA twr now gds 3105,4495,6210,3117.5 kcs., 126.18,118.5 122.5 mcs. These data rcvd too late for "ANRA". FLD: Unlgtd 92' pwr line 1/2 mi N of bndry. (11-1)
★BELMONT-RADIO: Dec. 23, compass lctr decomm. See San Francisco Gap.
BELMONT ARPT-Avail. at pilots risk (equip). NW end Rnwy 28 closed. (4-23)
★BIDWELL FLD (RED BLUFF)-RADIO: CAA twr now guards 3105,4495,6210, 3117.5 kcs. 126.18,122.5 mcs. These data rcvd too late for inclusion in "ANRA" CAA twr will be discont about Feb. 1. (1-6)
BRAWLEY ARPT-Holes in extreme NW corner fld. (3-20)
BROWN FLD NAAS (OTAY)-Use in emerg only (caretaker status-no facs)
BURBANK-RADIO: Intermittent interference from Navy transmissions on adjacent channel of 245 kcs. (5-23)
BURBANK-LOCKHEED AIR TERMINAL-CLOSED TO ALL NAVY ACFT EXCEPT ON OFF. BUS. THIS STN. Right traffic use Rnwys 7, 15; left traffic use Rnwys 25, 33. Approach lgts Rnwy 7 changed to red. Lgts on approach to Rnwy 7 partially obstructed by trees. 2-way radio rqrd all acft. (8-2)
CAL AERO ARPT (ONTARIO)-Use rnwys only (parked acft)
CANNON FLD (FRESNO)-Landings from SE and take-offs to SE prohibited.(11-6)
CASTLE FLD (MERCED)-RADIO: Army air ground stn temp inop. (11-25)
CATES, BEACON SITE 235 MI. BLINKER, SF-SA-Beacon inop. (2-17)
CLEAR LAKE SEAPLANE BASE-Avail. in emerg only. (6-11)
COMPTON CENTRAL ARPT (COMPTON)-Petroleum tank farm NW of fld in edge of right traffic pattern. Enter pattern at 45° angle on the down wind leg, at 800' over edge of tank farm. (10-26)
CONCORD ARPT-CLOSED EXCEPT IN EMERG. (10-30)
CORCORAN-135' unlgtd twr being const adj Santa Fe RR, downtown Corcoran. Upon completion will be 148' high and lgtd. (2-24)
COTATI OLF-Crash truck avail. at Santa Rosa NAAS upon req. (6-11)
CROWS LANDING NAAS-Use in emerg only (caretaker status-no facs)
DEL MAR ARPT-Right traffic at 600' with prevailing westerly winds. (12-7)
DESERT CENTER INT, SITE 17, LA-PH-E/W strip emerg use only. (9-19)
EL CENTRO NAS-Avail. 0700 to 1800. Other hrs on 30 min prior notice. Service rnwy will be lgtd for emerg use. Tetrahedron lgtd all times. (12-11)
EL TORO MCAS (SANTA ANA)-Fld carrier landing practice Rnwy 25L. Trans acft use Rnwy 25R when practice in progress. (11-15)
FAIRFIELD-SUISUN AAF (FAIRFIELD)-RADIO: Army range unreliable, use for homing only. (9-30). Middle mrkr inop. Stn lctn mrkr is used as outer marker. (12-11) FLD: First 1000' Rnwy 25, new Rnwy 21 closed. (12-17)
GARY FLD (BLYTHE)-Use rnwys only (parked acft)
GRAND CENTRAL ARPT (GLENDALE)-CLOSED TO ALL ACFT IN EXCESS OF 35,000 LBS. Parking area pitted, mrkd. W end Rnwy 12-30 being shortened 1000'. (6-1)
HAMILTON FLD (SAN RAFAEL)-Exten to Rnwy 12 closed except in emerg. (10-18)
HARMON FLD (SAN JACINTO)-Traffic pattern 2200' indicated or 600' above ground. Left pattern when taking off to NE-right pattern to SW. (10-28)
HASTER FARM OLF (GARDENGROVE)-Closed to all civil. acft except in emerg or on approval of the CO. (11-8)
HAWTHORNE ARPT-NORTHROP FLD (HAWTHORNE)-CLOSED EXCEPT ON OFF. BUS. Use Los Angeles Arpt.
HOBERG ARPT (LOWER LAKE)-Take off to SSE-land to NNW. (7-11)
HOLTVILLE ARPT-Closed-emerg. use only.
HORSE FARM OLF (LOS ALAMITOS)-Closed to all civil. acft except in emerg or on approval of the CO. (11-8)
HUMBOLDT CO. ARPT (EUREKA)-Closed to trans acft-const. Obst lgt atop N 350' radio twr approx 11 mi SSW inop. Twrs being dismantled. (10-29)
INDIO-RADIO: 116.1 mc transmitter and rcvr temp inop. (11-22)
INYOKERN NAF-Use in emerg only (caretaker status-no facs)
LINDBERGH FLD (SAN DIEGO)-Acft departing for or arriving from Mexico land at Lindbergh Fld for customs clearance. Closed to acft without 2-way radio unless prior approval rcvd from Arpt Mgr. (12-6)
LIVERMORE NAS-Avail. emerg use only. (10-1)

LIVERMORE OLF-Obsts in SW corner fld. (2-4)
LOCKHEED AIR TERMINAL-See Burbank
LONG BEACH ARPT-Obst lgts atop 185' twr Rdo Stn KVOE 15 mi ESE (107°) true inop. No 91 oct. mil acft. Ltd svcg. No maintenance. Const entire N bndry fld, mrkd Ctn landing Rnwys 16R, 16L. (12-9)
LOS ALAMITOS NAS (LONG BEACH)-Closed 1730 to 0800 except in emerg. Rnwy 22L closed. (9-1)
LOS ANGELES-SPECIAL NOTICE-All acft requested to avoid Hollywood Bowl Area from 2000 to 2300 daily. (7-26)
LOS ANGELES ARPT-MINES FLD (LOS ANGELES)-RADIO: Lclzr and glide path of CAA ILS temp inop. (12-28) Soon, approach control service will be inaugurated. CURTISS-WRIGHT ARPT (MILWAUKEE)-Closed ngts. (9-26)
EAU CLAIRE MUN; ARPT-Use rnwys only. Shoulders rough and soft pending completion of grading opers in spring 1947. (11-18)
••GENERAL MITCHELL FLD (MILWAUKEE)-155' chimney 1.5 mi E, lgting perm discont. (1-2) Equip. on fld days. Right turn procedure rsid to lcly based acft. All acft land according to tetrahedron unless otherwise instructed by twr. All pilots must register in Admin Bldg upon arvl and dptr. Position lgts must be turned on and operating between sunset and sunrise for all flights to and from fld. Ditch extending 150' S of intersection NE/SW, NW/SE rnwys paralleling SE portion NW/SE rnwy for 1/2 mi. E taxiway closed. Obst lgt atop 95' chimney SW corner fld inop. (12-30)
GINNOW AIRPORT (OMRO)-Use strips only. (6-7)
••GREEN LAKE ARPT-New fld. 43-50, long 89-02 (12-13) See pages 16 and 33.
KENOSHA AIRPORT-Only N bank floodlgts avail. on req. (6-10)
LA CROSSE ARPT-Use rnwys only. (9-24)
LA CROSSE INT, SITE 23A, CG-TWIN CITIES-Snow fence erected 50' W of E bndry entire length of fld. E bndry lgts moved in to snow fence. (11-8)
MOREY AIRPORT (MADISON)-Equip. on fld - portions under const. marked. (4-28)
PLATTE AIRPORT (PLATTEVILLE)-CLOSED (const). (6-12)
RICHLAND CENTER ARPT-Equip on fld. (8-10)
SHAWANO ARPT-Use rnwys only. E/W strip under const. (10-8)
SKY HAVEN AIRPORT (MILWAUKEE)-S 1/3 portion N/S strip unusable (washouts). (6-5)
SOLON SPRINGS ARPT-Const.unusable. (10-29)
STEVENS POINT AIRPORT-Use rnwys only. (8-9)
TAYLOR CO. ARPT (MEDFORD)-Avail. in emerg only. Very rough. Maintained for small acft only. (6-6)
TOMAH AIRPORT-N/S strip under const. (7-9)
TRUAX FLD (MADISON)-Use rnwys only. Grass area 75' wide adj to rnwys rough, bal of grass areas unsafe and rough. Fld lgts and svcg not avail. 0030 to 0730.
VETERANS FLD (MENOMONIE)-Rough. (1-2)
WATERTOWN MUN; AIRPORT-N/S strip soft - use W part of sod when wet. (4-10)
WAUKESHA CO. ARPT-Acft turn left after landing and taxi on right side of strip. (12-13)
WINNEBAGO CO. ARPT (OSHKOSH)-Use rnwys only. (1-2)

WYOMING

CASPER AAF-RADIO: Army air to ground stn. temp. inop. (11-20)
CASPER CENTRAL ARPT (CASPER)-NE/SW strip under const. (8-2)
••CHEYENNE ARPT-RADIO: CAA twr now guards 3105, 4495, 6210, 3117.5 kcs., 116.1, 126.18, 122.5 mcs. (1-3) These data rcvd too late for inclusion in "ANRA". FLD: Equip. on fld days. Lgtd bldg between E/W rnwy and taxi strip, 1000' from E end. (1-1)
••DOUGLAS-RADIO: Stn class: BHVT. (1-8) These data rcvd too late for "ANRA".
JACKSON MUN; ARPT-Cattle on fld intmtly. (5-20)
KNIGHT INT, SITE 6, SL-OH-Soon will be decomm. Bcn will remain in oper as airways bcn with course lgts changed from green to red. (10-20)
SHERIDAN CO. ARPT-N/S rnwy unsafe heavy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Stay on pavement. Equip. on fld. (12-31)
WARDWELL FLD (CASPER)-Use rnwys, taxi strips only-bal fld rough. 30 million candle pwr ceilometer projector 1000' N of bcn. (10-30)

AERONAUTICAL CHARTS

U. S. Coast and Geodetic Survey Dates of Latest Prints

Dates in small type indicate minor changes which are not of sufficient importance to make the previous print obsolete. All charts carrying dates older than those shown in large type on this list are obsolete for use in flight.

DIGEST OF AIR TRAFFIC CONTROL PROCEDURES

This digest is prepared expecially for the use of pilots operating within control areas, airport approach zones and airport traffic zones. For detailed information, see Civil Aeronautics Administration Manual 60, AAF Regulation 60-16, and pertinent Navy Publications.

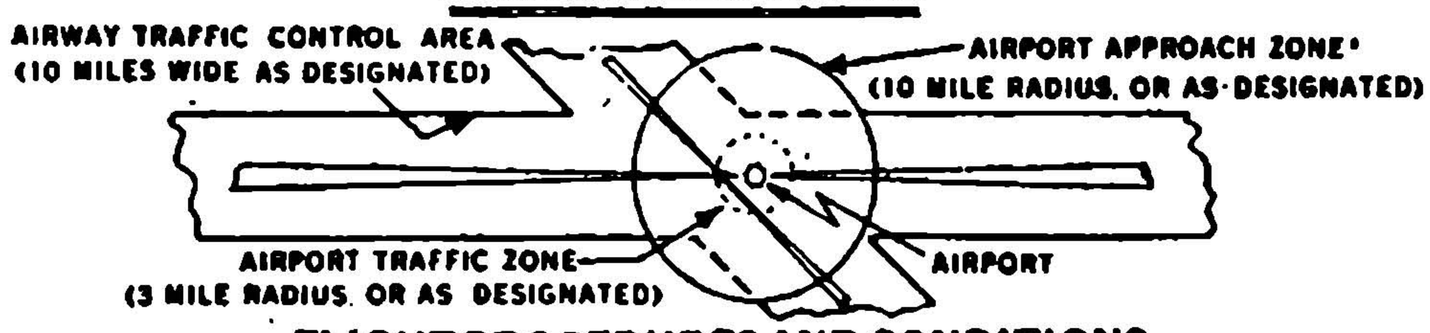
CONTACT FLIGHT RULES WEATHER MINIMUMS

	Inside Airport Traffic Zone (3-mile radius)	Inside Control Area (but outside of Airport Traffic Zones)	Elsewhere
Flights at altitudes of more than 700 feet above surface	500 feet vertically, 2000 feet horizontally from all clouds* - 3 miles visibility*	500 ft. vertically, 2000 ft. horizontally from all clouds-3 miles visibility (or 1 mi. with traffic clearance)	500 feet vertically, 2000 feet horizontally from all clouds 1 mile visibility
Flights at altitudes of 700 feet or less above surface	500 feet vertically, 2000 feet horizontally from all clouds* - 3 miles visibility*	Clear of clouds ** 1 mile visibility	Clear of clouds ** 1 mile visibility

*If traffic conditions permit, a control tower or control center will issue a traffic clearance when the minimums are less than those specified, but under this provision the flight must remain clear of clouds.

**In airport approach zones flights must remain 500 feet vertically and 2000 feet horizontally from all clouds unless a center or tower issues a traffic clearance for flight "clear of clouds"

CONTROLLED AREAS



FLIGHT PROCEDURES AND CONDITIONS

The types of flight plans and conditions under which aircraft may be operated are summarized as follows:

CONTACT FLIGHT RULE (CFR)- Aircraft must be flown in weather conditions equal to or better than those outlined in the weather minima chart without benefit of reductions authorized by a traffic clearance. No flight plan or communication contacts are necessary other than as required by an airport traffic control tower for regulation of local airport traffic.

CONTACT FLIGHT RULE-CONTROLLED- Aircraft may be operated in weather conditions lower than the basic weather minima within control areas, airport approach zones, and airport traffic zones, providing the pilot files flight plan specifying the route to be flown with an airway traffic control center or airport traffic control tower, he receives a traffic clearance and he complies with all conditions stipulated in the clearance. Communication contacts and position reports may be required by Air Traffic Control for this type of flight, as traffic control separation will be afforded aircraft on the same basis as aircraft operating on an IFR flight plan.

INSTRUMENT FLIGHT RULE (IFR)- Pilots proposing to operate aircraft in accordance with instrument flight rules are required to: file a complete flight plan with an airway traffic control center or airport traffic control tower and obtain a traffic clearance from the center or tower prior to flight; maintain continuous listening watch on the appropriate radio frequency, and report by radio the time and altitude of passing each designated reporting point. When an aircraft on an IFR flight plan is operating in weather conditions lower than the basic CFR minima a minimum altitude of 1000 feet above the surface must be maintained.

A traffic clearance specifying that a portion of a flight is to be conducted in accordance with contact flight rules (CFR) will require that the pilot maintain without reduction, the basic contact flight rule minima as specified in CAR 60 and assume the responsibility of avoiding other aircraft during the portion of the flight specified. In the event of two way radio failure, a pilot may (1) proceed according to current flight plan, maintaining the minimum safe altitude or the last acknowledged assigned altitude, whichever is higher, to the range station from which approach will be started to the airport of intended landing, and commence descent at approach time last authorized; or if such time has not been received and acknowledged commence descent at the time of arrival specified in the flight plan. Under such conditions a full standard instrument approach should be executed unless a CFR approach is made, or (2) if weather conditions permit, proceed in accordance with CFR; or (3) land as soon as practicable. Normally, if the aircraft is operating in CFR weather conditions at the time the radio failure is discovered, the pilot should proceed in accordance with contact flight rules to the airport of first intended landing or to the nearest suitable airport. If this is not possible, the pilot will proceed according to current flight plan. In order that uniform flight levels will be maintained by all aircraft, the altimeter should always be set to the altimeter setting of the nearest reporting station as the flight proceeds. The altimeter setting is issued by the Weather Bureau, and when placed on the barometric scale of the altimeter, will result in a reading of the elevation above sea level on the height scale of the instrument.

Traffic Clearances: In order to prevent delay to aircraft operating in contact flight rule weather conditions and yet ensure adequate separation when and if instrument flight rule weather conditions are encountered, traffic clearances to pilots filing instrument flight rule (IFR) flight plans may amend such flight plans by requiring flight in accordance with contact flight rules (CFR) for all or a portion of the flight. A traffic clearance will specify the approved altitude followed by the abbreviation "CFR". Upon receipt of such clearance, the pilot will be responsible for avoiding other aircraft while operating in CFR weather conditions and for securing an amended clearance at the specified altitude before IFR weather conditions are encountered. The pilot must remain in CFR weather conditions until the amended clearance is received. For efficient operation, the use of this procedure can only be determined by Air Traffic Control. Pilots, therefore, should not file "altitude/CFR" in any flight plan. "Altitude/CFR" is to be used only in a traffic clearance issued by Air Traffic Control.

N.B. A flight plan is required on all AAF flights except for local flights within a defined local flying area.

Arrival Reports-It should be noted that whenever a flight plan has been filed whether for CFR or IFR operations, an arrival report is required, unless the pilot has stated in the flight plan that such report will not be filed.

Maintenance of Flight Altitudes-Within control areas, aircraft should be flown at even or odd thousand-foot levels above sea level depending upon the direction of flight as indicated by odd or even minimum altitudes shown on Flight Planning Charts, unless other altitudes are assigned and approved by an airway traffic control center.

Cruising altitudes outside of control areas or approach zones shall correspond to the direction of flight as indicated below:

MAGNETIC HEADING	Indicated Altitude (feet above sea level)
0° - 89° inclusive,	odd thousands: 1,000 ft.; 3,000 ft.; etc.
90° - 179° inclusive,	odd thousands plus 500 ft.: 1,500 ft.; 3,500 ft.; etc.
180° - 269° inclusive,	even thousands: 2,000 ft.; 4,000 ft.; etc.
270° - 359° inclusive,	even thousands plus 500 ft.: 2,500 ft.; 4,500 ft.; etc.

AIRPORT TRAFFIC CONTROL PROCEDURES

Aircraft with Two-Way Radio: If operating under contact flight rules, arriving aircraft should establish communication with the control tower when approximately 15 miles from the airport of destination. The tower will issue such instructions as are necessary. Pilots should remain tuned to the tower until the landing is completed and the aircraft parked. If on an instrument flight plan, arriving aircraft should remain on range frequency as long as required for navigational purposes. The control tower should not be contacted until after a clearance "to the tower" has been received and the aircraft is 15 miles or less from the airport and clear of clouds, unless otherwise instructed. The clearance, "Cleared to Blank Tower", is also approval for approach subject to any restrictions or instructions contained in the clearance. This clearance, without any restrictions, is approval to make approach for a landing using whatever type of approach desired by the pilot.

Aircraft with Receiver Only: Remain tuned to the tower at all times when within the airport traffic zone. Acknowledge signals in the daytime by movement of ailerons or rudder on the ground and by rocking wings in the air, & at night by flashing landing light. Clearance from the tower should be received for taxiing, landing and taking-off; however, sufficient movement of the aircraft to attract the attention of the tower is permitted. If tower does not issue radio instructions, watch for light signals as the tower may not realize that the aircraft is equipped with a receiver.

Aircraft without Radio Equipment: Observe the tower for light signals, and acknowledge as above. The light signals are:

VISUAL SIGNALS FROM PORTABLE TRAFFIC SIGNAL LIGHT

Color and Type of Signal	Taxi-ing	Ready for Take-off	In Flight
STEADY GREEN	XXXXXXXXXXXX	Cleared for Take-off	Cleared to Land
FLASHING GREEN	Continue Taxi-ing	XXXXXXXXXXXXX	XXXXXXXXXXXXXXX
STEADY RED	Stop	Clear the Runway Immediately, and Wait	Give Way to Other Aircraft and Continue Circling
FLASHING RED	Return to Hangar Line	Return to Hangar Line	Return and Land
ALTERNATING RED AND GREEN	General Warning Signal - Exercise Extreme Caution		

Traffic and Taxi Patterns have been established at busy airports to illustrate the desired flow of aircraft on the ground and in the air under specified wind conditions. If the traffic pattern is not known, follow other aircraft unless otherwise instructed.

If a pilot does not receive either radio or visual signal from the tower when approaching for a landing, he should make at least one complete circle of the airport conforming to the traffic pattern, and then start approach for a landing. The pilot should be on the alert for a signal from the tower and maintain a watch for other aircraft.

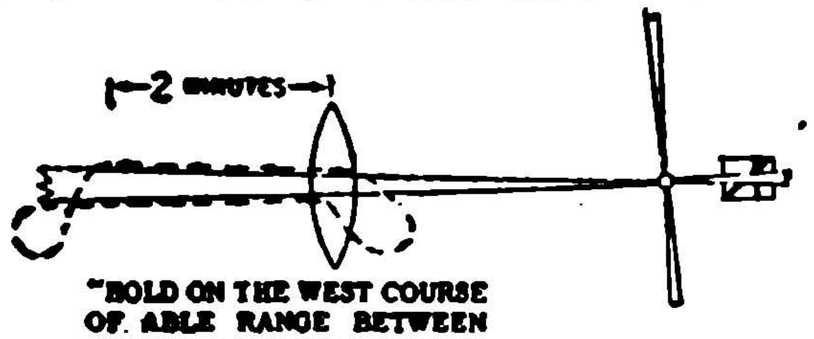
HANDLING OF CFR FLIGHT PLANS, AND ARRIVAL REPORTS

CFR flight plans may be filed with any CAA airways communication station or airway traffic control center. These flight plans are not transmitted to the point of destination but are held in suspense until notice of arrival is received. One hour after the estimated time of arrival, if no notice of arrival is received, queries are sent out over CAA communication systems to determine the location of the aircraft. If the arrival report is not received within three hours, search and rescue operations are initiated. Inasmuch as the Government may be put to considerable expense in determining the location of aircraft when an arrival report is not filed, it is vitally necessary that all pilots using this service make certain that notice of arrival is filed with the CAA communications station at the termination of the flight. Arrival reports are transmitted over CAA circuits to the station holding the flight plan.

In order to reduce radio congestion, pilots should file CFR flight plans, when required, in person or by telephoning the airways communication station or airway traffic control center. CAA control towers have discontinued accepting CFR flight plans for transmission and will not normally file arrival reports except upon the specific request of the pilot. Whenever practicable, however, it is desired that arrival reports be filed in the same manner as flight plans.

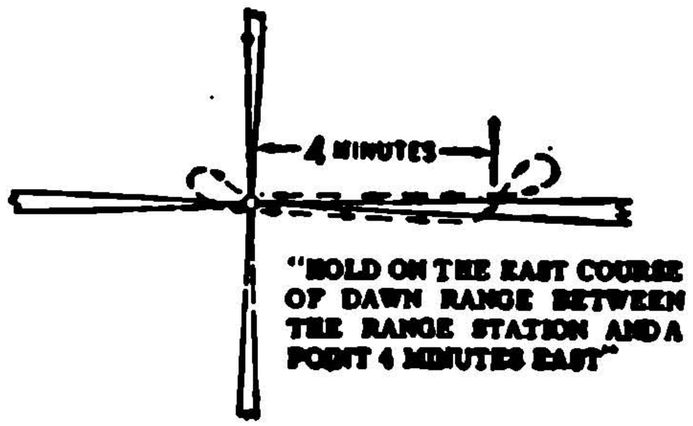
HOLDING PROCEDURES FOLLOWED BY AIRCRAFT AT RADIO FIXES

The standard holding flight path of an aircraft operating on an instrument flight rule flight plan and being held at a radio fix is to follow the right edge of the on-course signal of the specified leg of the appropriate radio range. The aircraft shall hold between the designated holding point and a point 4 minutes' flying time therefrom in the direction specified starting procedure turns at the holding point and a point 4 minutes therefrom. Unless prevented by obstructions or unless otherwise advised by an Airway Traffic Control Center or Civil Aeronautics Administration Airport Traffic Control Tower, the initial turn of a procedure turn shall be made to the left when flying away from the range station and to the right when flying toward the range station. The point to be used as the designated holding point will be identified in the traffic clearance which contains instructions for the aircraft to hold. When holding at an approach control marker, the holding flight path will extend from the specified holding point to a point not to exceed 2 minutes' flying time therefrom in the direction specified. When instructions are received giving the time of departure from the holding point, the pilot may adjust his flight path so as to be able to depart from the marker at the exact time specified.



"HOLD ON THE WEST COURSE OF ABLE RANGE BETWEEN BAKER FAN MARKER AND A POINT 2 MINUTES WEST"

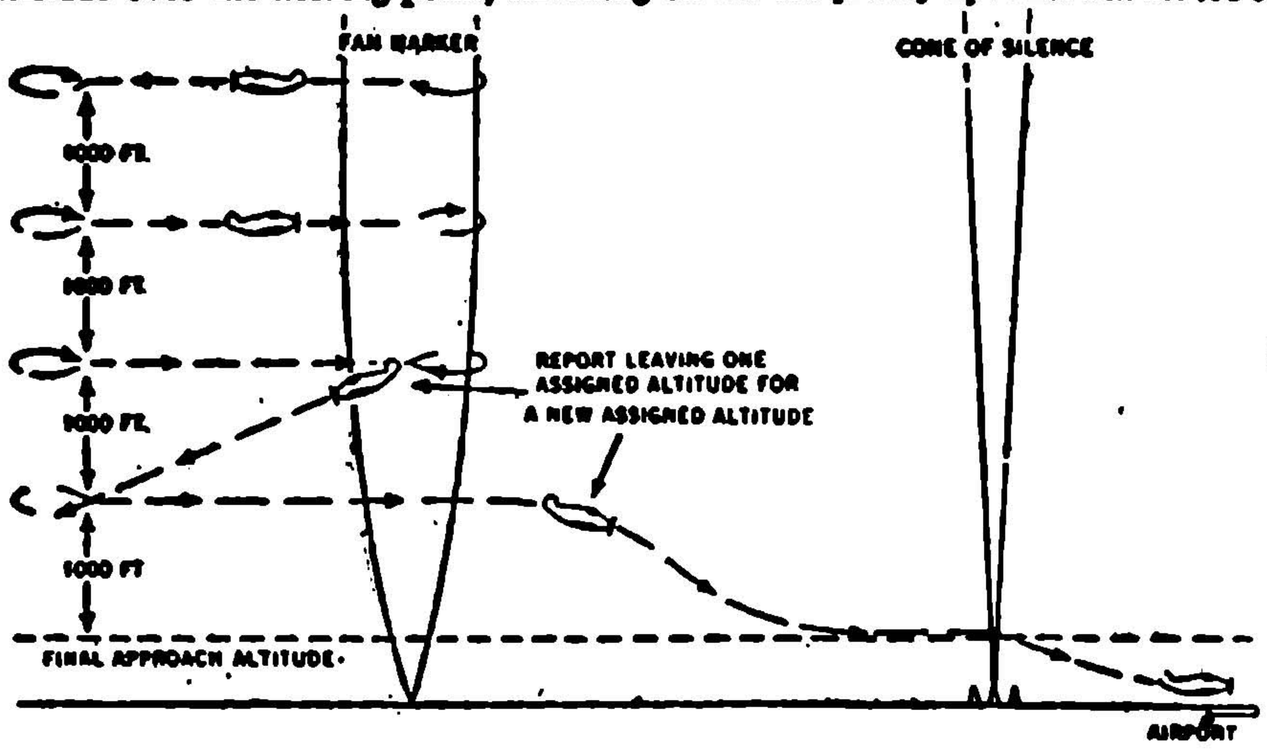
"HOLD ON THE EAST COURSE OF SMITHVILLE RANGE BETWEEN JASON INTERSECTION AND A POINT 4 MINUTES EAST"

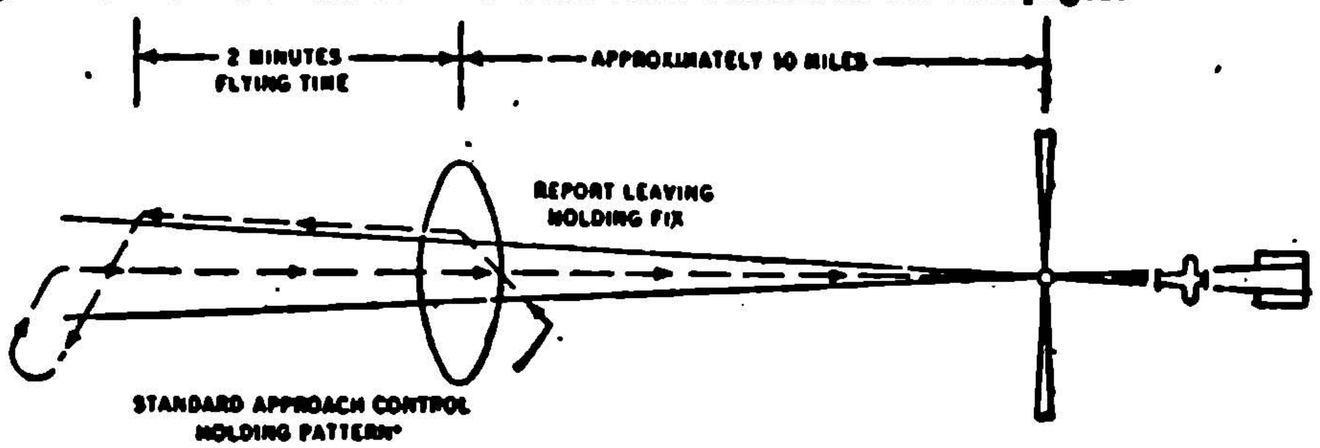


"HOLD ON THE EAST COURSE OF DAWN RANGE BETWEEN THE RANGE STATION AND A POINT 4 MINUTES EAST"

APPROACH CONTROL PROCEDURES

Approach control is a service whereby Civil Aeronautics Administration airport traffic control towers issue control instructions in instrument weather conditions, by communicating directly with pilots over the voice feature of a radio range, or over a very-high frequency channel of the control tower. Ordinarily, aircraft will be cleared by the airway traffic control center to the holding fix, (fan marker or other radio fix) with appropriate holding instructions. Instructions to hold "UNTIL FURTHER ADVISED BY (Name of) APPROACH CONTROL ON (Blank) KILOCYCLES" are included by the arwy traffic control center so that the pilot will know on which frequency he will receive further instructions from the tower. When he arrives over the holding point, the pilot initiates a call to "(Name of) APPROACH CONTROL" and advises time and altitude over the holding point, listening on the frequency specified in the ATC clearance for further instructions. Radio contacts required thereafter: (a) when vacating any previously assigned flight level for a newly assigned level; (b) when leaving holding point. Each pilot in an approach sequence will be given advance notice as to the time he should leave the holding marker on approach to the airport. When the time of leaving the holding point has been received, the pilot should shorten the standard holding path remaining in the immediate vicinity of the marker so as to leave the marker as closely as possible to the designated time. Pilots should maintain communication by listening to approach control frequency until cleared to the tower's local control frequency (278 kc. or equivalent). Departing aircraft will receive initial instructions on the tower's local control frequency. Approach Control is established at locations indicated as AC in the station class column on the data pages.





*NOTE: STANDARD 2 MINUTE HOLDING PATTERN FOLLOWED BY ALL AIRCRAFT HOLDING UNTIL INSTRUCTIONS ARE RECEIVED GIVING TIME OF DEPARTURE FROM HOLDING POINT. THEN PILOT SHORTENS HOLDING PATH, REMAINING IN IMMEDIATE VICINITY OF HOLDING POINT SO AS TO LEAVE MARKER EXACTLY AT SPECIFIED TIME.

—►— • New or revised data *

RADIO CLASS DESIGNATIONS

AC.....Approach Control Tower, CAA
B.....Scheduled Broadcast Station (broadcasts weather reports at 15 and 45 minutes after the hour unless otherwise cited.
C.....Control Tower, CAA
CA.....Control Tower, Army
CI.....Control Tower (City, County, Private, etc.)
CN.....Control Tower, Navy
D.....Distantly controlled
FM.....VHF fan type marker (100 watts)
FMK.....Compass locator station when combined with fan marker
GCA.....Ground control approach system
H.....Non-directional radio-beacon (homing), power 50 watts or more
ILS.....Instrument Landing System
IM.....VHF boundary marker
K.....Independent compass locator station
LFM.....VHF fan type marker, low powered (5 watts not over 10 miles from range)
MH.....Non-directional radio-beacon (homing), power less than 50 watts
ML.....Range (loop radiators), power less than 50 watts
MM.....VHF middle marker
MMK.....Compass locator station when combined with middle marker of Instrument Landing System
MRA.....Range (adcock, vertical radiators), power more than 50, less than 150 watts
MRL.....Range (loop radiators), power more than 50, less than 150 watts
OM.....VHF outer marker
OMK.....Compass locator when installed at outer marker, site or within 5.5 miles of middle marker
P.....Point to point radio
RA.....Range (adcock, vertical radiators) power 150 watts or more
RL.....Range (loop radiators), power 150 watts or more
S.....Simultaneous (range signals and voice) type of transmitter
T.....Teletype
TX.....Principal teletype
V.....Voice communication with aircraft
VAR.....Visual-aural VHF range
W.....Without voice facilities
Z.....VHF station location marker at a range station

N.B. Variation is computed at the station. The distance from station to field is computed from the center of the range station to the nearest edge of the usable area of the airport. The bearing is that from the range station to airport or fan marker.

AIRWAY RADIO COMMUNICATIONS

GENERAL

All radio range stations (class RA, RL, MRA, MRL, ML) emit directional signals (type A2 emission) 1020 cycles per second modulation.

All radiobeacon stations (class H and MH) emit non-directional signals (type A2 emission 1020 cycles per second modulation. Unless otherwise noted, all stations, other than class MH, operate continuously within their assigned hours of service except during interruptions for voice transmission on the same frequencies where simultaneous transmission is not available and during shutdowns for maintenance purposes. Class MH stations operate on request unless otherwise cited. The effective range of an MH facility is ordinarily 25 miles.

Compass locators are low-powered nondirectional facilities operating in the 200-415 kc. band. They are installed near airports to make it easier for pilots to make instrument approaches. When holding is required, they also help the pilot follow a more precise holding pattern. Compass locators, however, should not be depended upon as long range navigational aids since they are rarely useful at distances of over 15 or 20 miles.

Voice communications facilities are available unless "W" (without voice) is included in the classification. Examples: SMRAW, MRLW, HW, HWT. Transmission of voice on a frequency other than the range frequency is indicated as MRLW-V. When no "W" is included in station class, the "V" indicates voice feature on two frequencies, namely, range frequency and, generally, V.H.F. of 116.1 mcs.

The classification designation "B" denotes that the station broadcasts airway and meteorological information on a scheduled basis at 15 and 45 minutes past each hour unless otherwise cited.

All Civil Aeronautics Administration stations equipped for voice communications with aircraft stand continuous listening watches on the frequencies of 3105, 4495, and 6210 kcs., unless otherwise cited.

AUTOMATIC RANGE MONITORING SYSTEM

The automatic range monitoring system will automatically notify all pilots using a range on which it is installed, whenever an abnormal condition exists on the final approach course, the only course monitored at the present time.

The notification, or warning signal, will consist of the slow transmission of one group of three "U"s (. . - . . . - . . -), between two station identification transmissions. This warning signal will be transmitted: (a) whenever a course displacement of 3° or more exists; (b) whenever a sudden and large loss of signal strength occurs; (c) or whenever an apparent on-course signal (loss of N-A keying, producing a monotone which sounds like an on-course signal) exists throughout all quadrants.

Loss of signal strength is obvious, and loss of N-A keying is easily ascertainable by the pilot whenever the three "U"s identify an abnormal condition. The flier should suspect course displacement upon hearing the warning signal, if there has been no drop in range signal strength and the interlocked N and A on-course signal is well defined. On the other hand, the loss of N-A keying is indicated by warning transmission once only, when normal identifications are also missing.

In the case of range course displacement, the greater the course displacement, the earlier in the period between station identification transmission will the "UUU" signal be heard. An occasional warning signal transmission not repeated in every cycle, followed by the normal identification, may be disregarded since it may be occasioned simply by momentary power fluctuations.

* UNDER THE HEAVY BLACK LINE FOUND IN THE THE RADIO SECTION OF THE DATA PAGES ARE LISTED. OUT OF ALPHABETICAL ALIGNMENT, ALL THE NEW RADIO FACILITIES TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

INSTRUMENT LANDING SYSTEMS

An Instrument Landing System comprises a localizer (possibly a glide path), and a boundary, middle and outer marker. Infrequently, the middle or boundary marker is not commissioned at present and future installations will have no boundary markers. The entire system of transmitters (localizer, glide path, and markers) operate on V.H.F. All markers operate on 75 mcs.

Compass locator stations, on the other hand, operate on the low frequency 200-415 kilocycle band. Compass locator data will be found under marker data on the second line of those stations having such facilities. These are, with rare exceptions, located at the same sites as the V.H.F. markers, and have single letter identifications.

The localizer course of the Instrument Landing System divides the blue sector (150 cycles), which is to the right of the course in respect to the landing aircraft on final approach, from the yellow sector (90 cycles), which is left.

(L5) or (L8) in the Location Column under Instrument Landing Systems indicates hi-intensity runway contact lights (L5) or hi-intensity instrument approach lights (L8).

VHF RADIO RANGES

Simultaneous Visual-Aural VHF Radio Ranges have two visual and two aural courses with simultaneous voice transmission on the range frequency. A range of this type operates in the band 112 to 118 mcs. (Certain stations have been temporarily assigned the following frequencies: 108.3 mc, 108.7 mc, 109.1 mc.). Modulation frequencies of 90 cps and 150 cps are used to produce the visual courses. The sector in which the 90 cps modulation predominates is to be known as the "Yellow Sector", and that in which the 150 cps modulation predominates is to be known as the "Blue Sector". The aural courses are produced through the use of "N" & "A" signals with modulation frequency of 1020 cps.

V.H.F. RADIO RANGE ORIENTATION: The assignment of the blue and yellow sectors and the "A" and "N" sectors of C.A.A. VHF radio ranges is accomplished in accordance with the following rules:

(a) On Green and Red Airways, the blue sector lies north of the visual course, the yellow south; the "N" sector lies to the east of the aural course; the "A" west.

(b) On Amber and Blue Airways, the blue sector lies west of the visual course, the yellow east; the "N" sector lies to the north of the aural course, the "A" south.

(c) The visual courses are projected along the airway, the aural courses across the airway.

U. S. WEATHER BROADCASTS AND TRANSMISSIONS

All continuously operated C.A.A. Radio Range and Radio Beacon Stations having voice facilities on the Range or Radio Beacon Frequencies broadcast weather reports at 15 and 45 minutes past each hour.

At each station the material broadcast consists of the local weather report and the latest available surface weather reports from surrounding locations. Reports more than one hour old are not broadcast. In addition, the local winds aloft report is broadcast four times daily at 6:15 and 12:15 A.M. and P.M. At selected stations the Weather Bureau provides a local terminal forecast covering the next two hours, and this forecast is broadcast, when available, immediately following the local weather report.

FILING OF "OVER" REPORTS

Pilots should make every effort to file "over" reports when passing over those points designated as "Radio Fixes" on the Radio Facilities Charts. Refer to Chart Legend.

Pilots of aircraft operating on contact flight rule flight plans who desire to make flight progress reports shall include in the report the phrase "CFR" flight plan from _____ to _____.

Pilots of aircraft operating on instrument flight rule flight plans and who are required, therefore, to make flight progress reports, shall include in the report the phrase "Instrument flight plan". NOTE: The word "instrument", rather than the abbreviation "IFR" is used to avoid confusion between the abbreviations "CFR" and "IFR" under difficult radio reception conditions.

RADIOTELEGRAPH CALLING PROCEDURE

Radiotelegraph (A2 emission), in addition to radiotelephone (A3 emission), may be used to call Civil Aeronautics Administration airway communications stations. Radiotelegraph (A1 emission) may be used, but its use will require a prearranged schedule since receivers at the stations are set for A2 or A3 emission only. The Civil Aeronautics Administration airway communications station will reply on the radio range voice channel except as otherwise provided. When calling Civil Aeronautics Administration airway communication stations, it is desired that the radio call letters of the station be used. However, the stations will be on the alert for calls consisting of the radio range identification (listed under "Station Identification"), which may be used after two calls by voice have not been answered by the Civil Aeronautics Administration airway communications station or when unusual circumstances prevail or during emergencies. For example: A pilot using the Richmond, Virginia radio range who is unable to contact that station by voice, will radiotelegraph the following, using A2 emission: "RW RW RW K". Upon receipt of such a signal, the aircraft communicator at the Richmond radio range station will acknowledge on the voice channel of the radio range as follows: "UNIDENTIFIED AIRCRAFT CALLING RICHMOND RADIO OVER". The pilot then would resume use of voice for completion of the contact unless conditions require continuance of radiotelegraph. It is important that pilots use this procedure only after two unsuccessful attempts by voice to contact Civil Aeronautics Administration airway communications stations.

RADIOTELEPHONE (CALLING PROCEDURE)

When calling Civil Aeronautics Administration stations (except towers) or Army and Navy radio ranges, utilize the call "RADIO". When calling all airport control towers, be they Army, Navy, C.A.A., or municipal, utilize the call "TOWER". When calling Army Airways, utilize the call "ARMY AIRWAYS". Examples:

(a) "Jacksonville Radio This Is Stinson 1234".....When calling a radio range
(b) "Jacksonville Tower This Is Waco 4567".....When calling a control tower
(c) "Jacksonville Army Airways This Is Army 725".....When calling an Army Airways Communications Station
(d) "Langley Army Radio This Is Army 472".....When calling an Army radio range

COMBINED UNITED STATES-BRITISH RADIOTELEPHONE (R/T PROCEDURE)

This new procedure has previously been adopted by the War and Navy Departments for use by military aircraft and became effective June 1, 1943, for use by Civil Aeronautics Administration airway communications stations and airport traffic control towers and civilian aircraft. Military pilots may secure complete information from Army publication FM 24-9. The major changes in procedure are summarized below for the benefit of civilian pilots not having access to FM 24-9.

1. Use of the words "THIS IS" instead of the word "FROM".
2. Use of the word "OVER", instead of the words "GO AHEAD", to indicate, "MY TRANSMISSION IS ENDED AND I EXPECT A RESPONSE FROM YOU".
3. Use of the word "OUT" when conversation is ended and no response is expected.
4. Use of the phrase "SAY AGAIN", instead of the word "REPEAT" when requesting a repetition.
5. Use of the phrase "I SAY AGAIN", instead of the phrase "I WILL REPEAT", when a repetition is being given.

EXAMPLES:

WACO ONE EIGHT ONE FOUR THREE. THIS IS CLEVELAND RADIO OR CLEVELAND TOWER MESSAGE FOR YOU (Optional) OVER.

CLEVELAND RADIO or CLEVELAND TOWER, THIS IS WACO ONE FOUR THREE SEND YOUR MESSAGE (Optional) OVER.

WACO ONE EIGHT ONE FOUR THREE. THIS IS CLEVELAND RADIO or CLEVELAND TOWER (Message) OVER.

CLEVELAND RADIO or CLEVELAND TOWER, THIS IS WACO ONE EIGHT ONE FOUR THREE ROGER OUT.

Pertinent parts of all current publications, including Manual 60, are superseded insofar as communications procedures are concerned by the new procedure indicated above effective October 1943.

AIRPORT DATA
LEGEND

NAME

(Where city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport owned or leased in whole or in part by Army
(CG) Airport owned or leased in whole or in part by Coast Guard
(N) Airport owned or leased in whole or in part by Navy
★ CAA Intermediate Field
(P) Non-military airport available for use by military aircraft (See Note 3)

N.B. If the airport name is followed by (A) for Army, (N) for Navy, or (CG) for Coast Guard, the field is exclusively an Army, Navy, or Coast Guard field. If the field is not exclusively Army, Navy, or Coast Guard and may be used by civilians, no (A), (N), or (CG) follows the airport name.

SIZE — CLASS

49: Length of longest landing strip (unpaved) in hundreds of feet
49h: Length of longest hard-surfaced runway in hundreds of feet (Seaplane landing areas over 5 miles in length are classified as unlimited and indicated as "unl.").

N B Only the length of the longest runway is cited, and its direction is not indicated. Space restrictions occasioned this policy, but logic justified it. The logical assumption may be made that runways have been laid out in accordance with the local wind rose. Therefore, in all calms, or gentle-angling winds, or winds aligned with the longest runway, the longest runway will be used. When a wind not aligned with the longest runway is of such intensity that the longest runway cannot be used, this wind makes the use of runway aligned with the wind, even though much shorter than the longest runway, sufficiently long from a safety viewpoint. Too, prior knowledge that there is, for example, a NW SE runway is of little value to a pilot if, when he arrives over the field the wind is blowing too strongly from another direction to use that runway. Finally, the larger the number indicating the longest runway length, the greater is the assurance of a sufficient number of runways for all-wind coverage.

RADIO

R1 Voice availability via tower, range (or homing device), or voice station.
R2: Range (or homing device), and tower
R3: Range (or homing device), tower, and instrument landing system.

LIGHTS

L: Incomplete lighting, either flood or portable runway lights.
L1: Beacon only.
L2. Beacon and boundary.
L3: Beacon, boundary, and obstruction.
L4: Beacon, boundary, obstruction, and flood.
L5: Beacon, boundary, obstruction, flood, and runway contact
L6 Beacon, boundary, obstruction, flood, runway contact, and instrument approach.
(L5): High intensity runway contact lights
(L6): High intensity instrument approach lights

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

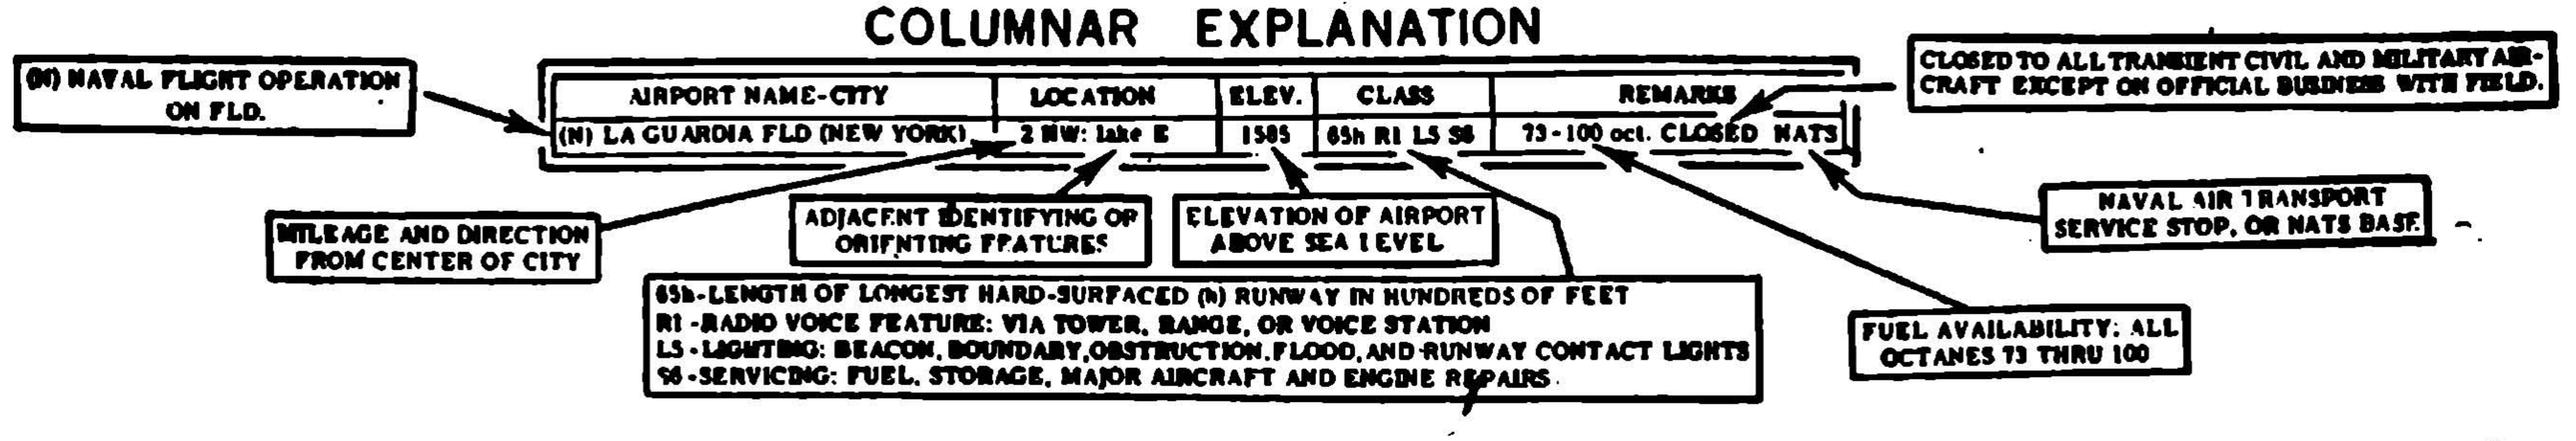
S1: Fuel.
S2: Fuel, storage.
S3: Fuel, storage, minor aircraft repairs.
S4: Fuel, storage, minor aircraft, and minor engine repairs.
S5: Fuel, storage, major aircraft, and minor engine repairs.
S6: Fuel, storage, major aircraft, and major engine repairs.

N B Very often small civilian fields (particularly in non-metropolitan areas) will have no full-time attendant. Frequently servicing at such fields in isolated communities is available only by circling the town to attract the operator's attention.
These fields are often recognizable by airport class, comparable to, for example, "1S S1". "1S S1" suggests that the field is not too large, and that the field may not have a full-time attendant even though fuel is stored there.
Lack of radio or lighting facilities, indicated by the absence of an "R" or "L" in the airport class, is a further indication that a full-time attendant may not be available. Absence of an "S" (servicing) indicates definitely that fuel, if available at all, is available only by truck from town. Any field carrying no indication of radio (R), lights (L), or servicing (S) in airport class column should be used with caution, especially a field of the small category. Fields of this nature may be inactive or not maintained, and thus dangerous for use.

NOTES

1. "(NC)" not charted. Indicates not charted because of insufficient data or inability to verify
2. → New or revised data.✱
3. "(P)" in CITY-AIRPORT NAME column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the United States Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the War Department.
4. "Effingham Int., 10, L5-ID" in CITY-AIRPORT NAME column indicates that the airport is Effingham CAA Intermediate Field, Site 10, on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the CAA are listed similarly except that there is no name fixed star or "Int.".
5. In Location column, the word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.
6. In Remarks column:
   (a) "91 oct." indicates octane rating of fuel available.
   (b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.
   (c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway.
   (d) "TEMP INACTIVE. NO FACS. (See Special Notice)" indicates AAF airfields used either exclusively by the AAF or municipal airfields used jointly by the AAF and civil interests at which both the Army and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the base to which the aircraft is assigned. (See Special Notice).
   (e) "ARMY TEMP INACTIVE. CIVIL FACS." indicates municipal airfields used jointly by the AAF and civil interests at which the Army facilities are inactive but civil facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.
   (f) "PRIVATE" indicates field is available for owner only, and not to be used by others except in emergency.
   (g) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines are cited.
   (h) "Fld lgts on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly, the field lights, indicated for such a lighted field (and, in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.
   (i) "FEE" indicates landing fee for private aircraft.
7. Airline stop airport names are capitalized.

COLUMNAR EXPLANATION



AIRPORT NAME ABBREVIATIONS

(A) - Army Field
AAB - Army Air Base
AAF - Army Air Field
CGAS - Coast Guard Air Station
LTA - Lighter than Air
MCAS - Marine Corps Air Station
MCAAF - Marine Corps Aux. Air Facility
MCGB - Marine Corps Glider Base
(N) - Navy Field
NAAF - Naval Aux. Air Facility
NAAS - Naval Aux. Air Station
NAF - Naval Air Facility
NAS - Naval Air Station
NPG - Naval Proving Grounds
OLF - Outlying Field (Navy)

FLIGHT PLANNING CHARTS

LEGEND

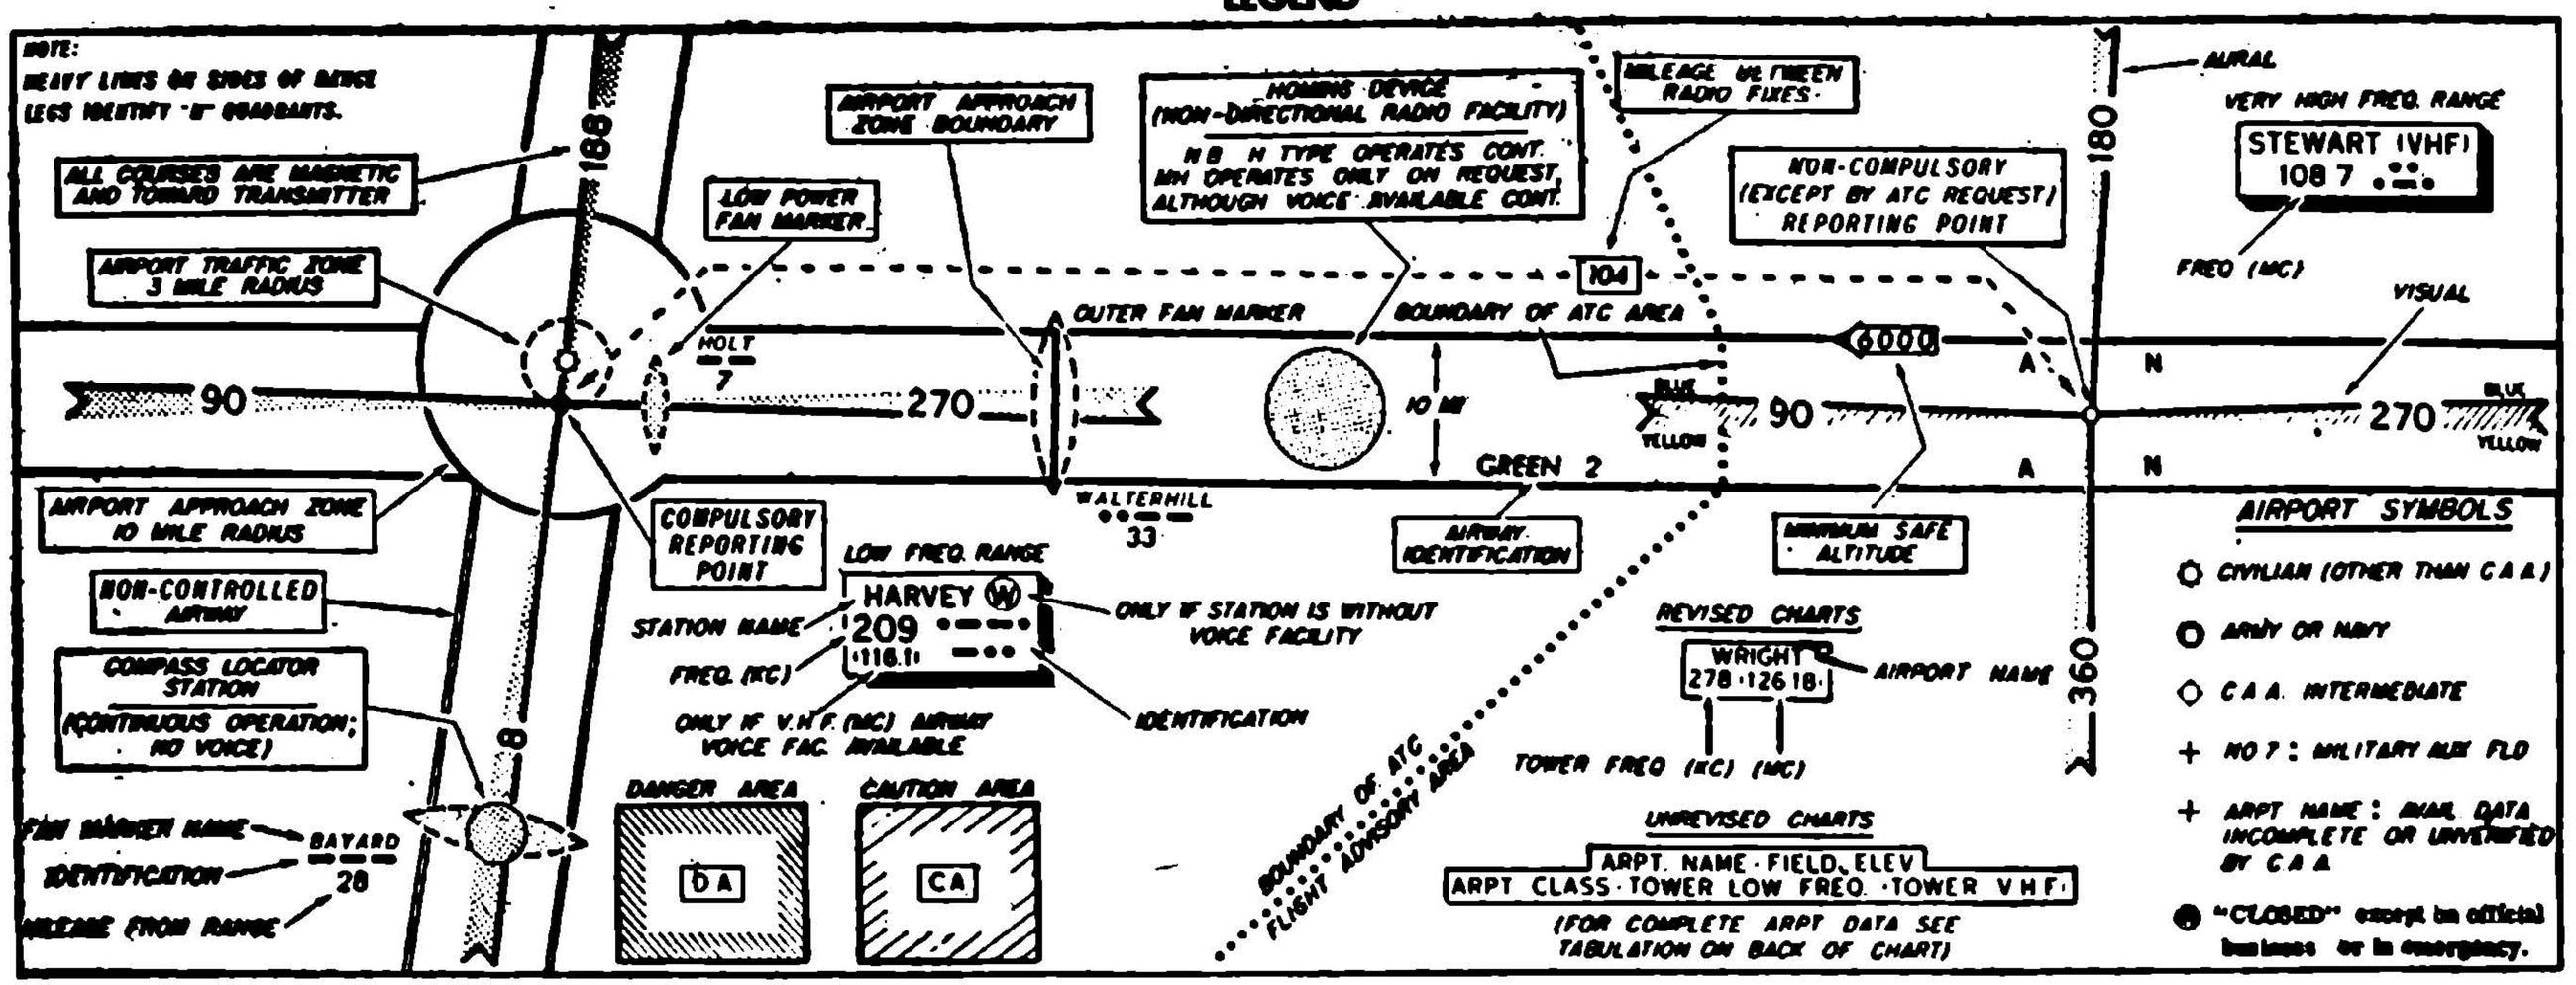

CHART CONTENTS

The Flight Planning Charts, in addition to the warning (R) and caution (O) symbols, indicate: (1) all aeronautical radio facilities except air carrier stations; (2) all minimum safe altitudes and fix mileages: (3) all Army and Navy fields and CAA intermediate fields, and all active civilian airports; (4) all danger and caution areas; (5) all designated airways. These charts indicate all facilities, and the current status thereof, on record with the CAA as of 0001 E.S.T. each alternate Tuesday.

CHART PURPOSE & USE

The primary purpose of these charts is to facilitate the planning and execution of cross-country flights. The user should check the charts for the symboled (R) or (O) items between his point of departure and his destination. If there is none, there is no necessity for him to read the Notices to Airmen section as far as temporary items are concerned. As for permanent changes - all major ones, such as new fields, abandoned fields, range frequency changes, etc., are currently reflected on the charts. For record-keeping purposes and for the correction of charts and publications, however, the Notices to Airmen section should be carefully read.

CHART HAZARD SYMBOLS

The current status of facilities and hazards as reported to the CAA is indicated by the symbol system. An airport closed because of construction, an inoperative range, a revised range quadrant identification or range frequency, or course realignment of 20° or more, for example, are indicated by the symbol (R) for red, or warning. An airport under construction but usable, or an inoperative control tower, on the other hand, is indicated by the symbol (O) for orange, or caution.

RADIO FACILITY HAZARDOUS FOR USE (SEE NOTICES TO AIRMEN SECTION)

AIRPORT HAZARDOUS FOR USE (SEE NOTICES TO AIRMEN SECTION)

RANGE COURSE LENGTHS

In general, the length of radio range courses shown herein indicates the approximate location where it is expected that a pilot will tune from one radio range to the next one along his route of flight. Such change-over points, however, are not mandatory, and it is expected that a pilot will use his best judgment in selecting change-over points that will best serve his needs.

Warning

Radio range courses are subject to disturbances that result in multiple courses, and signal fades and surges over rough country. Pilots flying over unfamiliar routes are cautioned to be on the alert to detect these vagaries, particularly over mountainous terrain.

✓ CAUTION- MANY SEAPLANE LANDING AREAS IN THE NORTH ARE CLOSED DURING WINTER MONTHS BECAUSE OF ICE.

OPERATION OF SEAPLANES ON THE NEW YORK STATE CANAL SYSTEM:

AN OFFICIAL COMPLAINT HAS BEEN RECEIVED FROM THE STATE OF NEW YORK, DEPARTMENT OF PUBLIC WORKS, THAT THE NEW YORK STATE CANAL CHANNEL IS BEING USED FOR THE TAKING OFF AND LANDING OF AIRCRAFT. THIS CHANNEL IS VERY NARROW AND HAS NUMEROUS CURVES. AIRCRAFT LANDINGS AND TAKE-OFFS ON THIS CHANNEL, THEREFORE, ARE DANGEROUS AND PRESENT A HAZARD TO CANAL TRAFFIC AND SMALL BOATS. ALL AIRMEN ARE CAUTIONED THAT SUCH ACTIVITIES MAY CONSTITUTE CARELESS OR RECKLESS OPERATION OF AIRCRAFT.

NOTICES TO AIRMEN

INTRODUCTION

PROCEDURAL STATEMENT: The AIRMAN'S GUIDE no longer has a separate section for the DIRECTORY OF AIRPORTS or the AIR NAVIGATION RADIO AIDS. These two sections are now inserted as data pages between the flight planning charts. To retain the 2-page chart flow, however, the data pages are found on the reverse sides of the charts rather than facing them. On the data pages are tabulated all the data covering the facilities charted on the reverse sides and formerly found in the DIRECTORY OF AIRPORTS and AIR NAVIGATION RADIO AIDS sections. To facilitate reference to a particular facility, an Index of Facility Locations with the parenthetical number of the page on which the locale is charted has been added to the revised AIRMAN'S GUIDE, e.g., Chicago (139). On the back of page 139 will be found the Air Navigation Radio Aids and the Directory of Airports data covering Chicago.

Because of the serious paper shortage every means of reducing the Airman's Guide bulk has been investigated. Codification and considerable abbreviation are already being utilized. No material may be deleted, however, in this paper conservation program because surveys have revealed that subscribers consider all parts of the Guide essential. Consequently, about the ultimate step in this bulk-reduction direction has just been taken. The data pages backing the charts now serve, where possible, as notam pages. Resultantly, most of the new data formerly notamized in the Notices to Airmen section with prefixed large stars or double asterisks are no longer carried in that section. Only commissionings, abandonments, or changes so potentially hazardous that they are indicated with (R) (for red flag) symbols on the charts, are now cited in the Notices to Airmen section.

Notamizing on the data pages is effected by the use of prefixed arrows as in the former Air Navigation Radio Aids publication. All changes from the previous issue, whether cited in the Notices to Airmen section or not, are indicated by the prefixed arrows. Following are examples of changes notamized only on the data pages: field obstruction, servicing, elevation, location, and runway length changes. Because of the use of the prefixed arrows as new data indicators, a further innovation had to be adopted. This is a heavy black horizontal line device.

Space below the heavy black horizontal lines on the data pages has been reserved as a supplement for new radio aids and airports whose data were received after the data pages were originally typed. Revisions to existing airports and radio aids are super-imposed on the old data, but new airports and radio aids are listed, necessarily out of alphabetical alignment, below the heavy black horizontal lines until the page is re-typed.

In summation: (a) on the data pages backing the charts, new data or revisions are indicated by arrows; (b) in the Notices to Airmen section, citations covering new or revised radio data are prefixed by one large star "★". Citations covering new or revised airport, or miscellaneous data are prefixed by two asterisks "**"

All temporary conditions (field soft, runway under construction, range course out of alignment, etc) are cited in full until they are no longer in effect. When a citation carries a permanent item and a temporary item, the permanent item is underlined. Parenthetical date at end of item indicates time item was reported.

To conform to chart practice, all facility data are listed in the Notices to Airmen section and on data pages alphabetically by states and by facility name. Thus, an airport will be found listed alphabetically under its own name rather than under its locale's name. If the airport or radio facility name is other than that of the city in which it is located, the location is shown in parenthesis after the facility name.

CIVIL FACILITY DATA: Please advise immediately the Office of Aviation Information, Attention A-250, CAA, Department of Commerce, Washington 25, D. C., whenever temporary conditions covering civilian airports or navigational aids begin or terminate, data revisions are effected, or flight hazards are erected or removed.

SPECIAL NOTICES

ARMY DATA: Advice covering Air Forces Fields or Air Forces Operations on civilian fields, or AAF Radio Facilities, and Danger or Caution Area activation, as well as requests for approval for the closing of any army airfields to transient military aircraft for a period in excess of ten days should be directed to: COMMANDING GENERAL, AIR TRANSPORT COMMAND, WASHINGTON 25, D.C. ATTENTION: HEADQUARTERS FLIGHT SERVICE, FLIGHT OPERATIONS. Information to be published will be coordinated and submitted to the C.A.A.

NAVY FACILITY DATA: In accordance with Hydrographic Office Memorandum for Aviations No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D. C., for transmittal to the Civil Aeronautics Administration. In accordance with Aviation Circular Letter #96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

✓ POLICY ON ARMY USE OF TEMPORARILY INACTIVE ARMY AIR FIELDS: 1. Municipal airfields which have been used jointly by the Army Air Forces and civil interests and at which Army facilities are temporarily inactive but the civil facilities are still active, may continue to be used by military aircraft. No servicing other than that provided by commercial concerns will be available. Such airfields will be identified herein by the following notice: "Army temp inactive - civil facs". 2. Temporarily inactive Army air fields used exclusively by the Army Air Forces (either owned or leased) or municipal airfields used jointly by the Army Air Forces with civil interests at which both Army and civil facilities are inactive will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned. Such airfields will be identified herein by the following notice: "Temp inactive - no facs". Above policy statement is not to be construed as countermanding any AAF regulations or letters governing command use of municipal airports or Army airfields.

"OFFICIAL BUSINESS" AS APPLIED TO AAF: The term "official business", within the meaning of AAF Regulation 85-2, is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining aircraft clearance, service, or other items attendant with itinerant operations. Cross country flights for the purpose of maintining flying proficiency are not considered to be official business within the meaning of this regulation.

AIRPORTS AVAILABLE FOR USE BY MILITARY AIRCRAFT: The attention of Army clearance personnel and of Army pilots is invited to provisions of Section III of Army Air Forces Regulation 85-2, which states in part: "The use by Army aircraft of private airports which have not been leased, purchased, or otherwise acquired by the

✓ Indicates new or revised Special Notice.

Federal Government is unauthorized except in case of emergency or for official visits authorized by an Air Force or Command". This Regulation further states "AAF transient itinerant aircraft may utilize: (a) Government or DLA (development landing area) type airports, subject only to such restrictions as may be listed from time to time in Weekly Notice to Airmen . . . (b) Private airports when legal permits for their limited use are procured by, and filed with the real estate agency of the War Department...". Reference to the AAF Installations Directory, and to the Data Pages as well as the Notices to Airmen section of the Airman's Guide should be made in case of doubt as to the proper use of fields. On the Data Pages, all AAF installations are designated by the prefix (A), Navy by (N) and DLA by (P).

CHANGES IN LISTING PROCEDURE FOR ARMY AIR FORCE AIRFIELDS: In an effort to simplify the use of Airman's Guide within the printing limitations imposed by the Government Printing Office, notices on Army airfields that are closed or temporarily inactive or surplus to Army Air Forces will be carried in the Directory of Airports section thereby eliminating the necessity for checking in more than one section to obtain the correct status of an airport. Minor restrictions such as hours of operation, service, and hazards will continue to be listed in the Notices to Airmen section. The following procedure has been placed in effect in this issue:

(a) The term "CLOSED" will be shown in the Directory section only, for all AAF airfields that are closed to all transient traffic except on official business or in emergency. The legend page of the Directory will give such a definition for "CLOSED". Airports that have been declared surplus to the AAF and on which permits have not been issued for civil use or which have not been otherwise disposed of by the W.A.A. will also be listed as "CLOSED".

(b) AAF airfields that now carry notices of "Army temp inactive - civil facs" or "Temp inactive. No facs. (See Special Notice re use)" will now have such citations in the Directory section only.

RESTRICTION ON FLIGHT OF AAF AIRCRAFT IN NEW YORK CITY AREA: No AAF aircraft except those on scheduled transport operations will be cleared to New York City Area unless point of first intended landing is Mitchel Field, Hempstead, L.I., N.Y. When instrument conditions prevail in New York City Area, no Army aircraft except those on scheduled transport operations will land at or take off from other than Mitchel Field. When contact conditions prevail in New York City Area, aircraft which have been cleared for Mitchel Field but which desire to land at other authorized fields in New York City Area will, when approaching New York City Area, obtain clearance from Olmsted Flight Service Center through normal communication means. For purposes of these instructions, New York City Area is defined as a circle 50 miles in diameter centered on southern tip of Manhattan Island. Contact weather New York Area will be considered to be 2000' ceiling, 3 miles visibility, both day and night. When cloud conditions exist below 2000', flight conditions will be considered IFR.

MILITARY AND NAVAL LANDINGS IN NEWFOUNDLAND: All military and naval aircraft landing in Newfoundland should use Harmon Field at Stephenville or Naval Operating Base at Argentia. Gander has very limited military facilities and is reserved for commercial and weather diverted military aircraft.

RESTRICTIONS ON AAF HELICOPTERS: YR-5A, R-5A, YR-5D, R-6D (except as indicated below*) and YR-5E helicopters may be released for flight only upon compliance with TO 01-230 HB-13 and -14.

*R-5D helicopters No. 43-46643 and subsequent have been modified by the contractor and may be released for flights.

ARMY FOREIGN CLEARING STATIONS: Under the authority of AAF Regulation 61-4, Army aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated: AFRICA - Morrison Fld.Fla.,Washington National Airport, D.C.; or Westover Field, Mass. ALASKA - McChord Field, Wash.; Great Falls AAF, Mont. BERMUDA - Mitchel Field, N.Y.; Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. CANADA - Great Falls AAF, Mont.; McChord Field, Wash.; Washington National Airport, D.C.; Selfridge Field, Mich.; or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA - March Field, Calif.; Kelly Field, Tex.; or Morrison Field, Fla. CARIBBEAN - Morrison Field, Fla. ENGLAND, GREENLAND, ICELAND, NOVA SCOTIA, NEWFOUNDLAND, AND NORTH IRELAND - Washington National Airport, D.C., and Westover Field, Mass. (Note: Selfridge Field also will clear for Nova Scotia and Newfoundland). HAWAII - Fairfield-Suisun AAF, Calif.

OPERATING PROCEDURE WITH FLIGHT SERVICE UNDER AAF MILITARY FLIGHT SERVICE COMMUNICATIONS SYSTEM (PLAN 62): 1. Departure from AAF Bases. No change. Reference: AAF Regulations 15-23 and 60-22. 2. Departure from non-AAF Bases. AAF aircraft departing from non-AAF bases will file a complete flight plan with, and secure approval from, the nearest Flight Service Center prior to takeoff, or as outlined in AAF Regulation 60-22. Communications with a Flight Service Center may be established by direct telephone to the center; or by a radio call to the nearest AAF Base or AACS airways radio station. In addition to the Flight Service clearance, pilots contemplating flight under Instrument Flight Rule conditions will secure a CAA Airway Traffic Control clearance. The CAA clearance normally can be obtained more rapidly by contacting CAA direct through CAA Communication facilities. If Civil Aeronautics Administration Communication facilities, however, are not available, the C. A. A. clearance may be obtained through Flight Service. 3. Change of Contact Flight Rule (CFR) Flight Plan Enroute. AAF aircraft requiring a change of route or point of first intended landing of a CFR flight plan enroute will contact Flight Service through an AACS Airway radio station or control tower, submit the information required by AAF Regulation 60-22 and, when necessary, secure Flight Service approval. 4. Change of Instrument Flight Rule (IFR) Flight plan, or CFR to IFR, or IFR to CFR enroute. AAF aircraft requiring a change of route, altitude, point of first intended landing, cruising speed or alternate airport, or change from CFR to IFR or IFR to CFR enroute, will contact a CAA communications station for coordination and approval by CAA Airway Traffic Control and Flight Service. If communications with CAA communications station cannot be established, AACS airways radio station will be contacted for coordination and approval by CAA Airway Traffic Control and Flight Service. 5. CFR Position Reports. When flying under CFR conditions, pilots will make position reports, wherever practicable, to AACS Airway radio stations enroute and receive any necessary advisories from Flight Service. 6. IFR Position Reports. When flying under IFR conditions, pilots will first make position reports to CAA communications stations as heretofore required, and will then make position reports to AACS airways radio stations in order that the responsible Flight Service Center may furnish any necessary advisories. 7. Voice Calls. AACS airways radio stations will be called by the location name followed by the word "airways", such as "Bolling Airways". This is distinct from the CAA radio call system which uses the location name followed by the word "radio", such as "Washington Radio". 8. All VHF equipped aircraft will be provided with a card to be prominently mounted near the VHF control box which will specify button, frequency, and service obtainable. An index to AACS airways stations within the U.S., together with a listing of the assigned frequencies, may be found on pages 94 and 95 of TO 08-15-1. The following table displays the channels and frequencies normally used to contact the various communication installations:

Button	Frequency	Service
A	116.10 mc.	CAA-AIRWAYS (RANGE STNS) *AACS Airways (Plan 62)
B	126.18 mc.	CONTROL TOWERS
C	137.88 mc.	AACS AIRWAYS (PLAN 62) *Control towers.
D	140.58 mc.	MILITARY EMERGENCY & GCA FINAL APPROACH CONTROL.

*Available for service indicated on a secondary basis.

9. It will be some time before all AAF aircraft are equipped for operation on AACS Airways frequencies. It is not the intent that pilots flying aircraft not so equipped attempt to make position reports to Flight Service as described above. Emergency Flight Service advisories, however, may be transmitted to such aircraft on the AAF control tower frequency. Aircraft which are equipped for operation on AACS Airways frequencies will contact airways stations whenever possible rather than AAF control towers.

10. The following list of telephone numbers will be used for contacting military Flight Service Centers:

CAA Area	Flight Service Area	Phone No.
Washington Pittsburgh New York Boston	Olmsted Flight Service Center Middletown, Pa.	Steelton 93387 Steelton 93470
Jacksonville Miami	MacDill Flight Service Center Tampa, Fla.	H-4871

Detroit Cincinnati St. Louis Chicago	Wright Flight Service Center Dayton, Ohio	Osborn 88691, Osborn 88692
Fort Worth San Antonio	Ft.Worth Flight Service Center Fort Worth, Tex.	Fort Worth 77251
Denver Minneapolis Kansas City	Lowry Flight Service Center Denver, Colo.	LD 116 LD 117
Los Angeles Albuquerque El Paso	March Flight Service Center Riverside, Calif.	Riverside 7107 Riverside 7108
Oakland Salt Lake	Hamilton Flight Service Center San Rafael, Calif.	San Rafael 5800 Text 2165 or 2167
Great Falls Seattle	McChord Flight Service Center Tacoma, Wash.	Lakewood 3324

STANDARD NAVY GROUND CONTROL APPROACH FREQUENCY ASSIGNMENTS: Allocations of freqs., both HF and VHF, for Navy GCA use have been coordinated with the AAF. Universal freqs allocated primarily for Navy GCA operational use are as follows: HF Communications - 3475,4890,6640 kcs.; VHF Communications - 134.64,142.02,143.64 mcs. As a safety precaution, Navy GCA Units will also be prepared to control acft on 140.58 mcs., the Navy emergency freq. To provide a means whereby Navy acft may receive assistance from Army GCA Units and vice-versa, the following agreement will govern: (a) Army GCA Units will at all times be prepared to control Navy Acft on 140.58 mcs. (b) Navy GCA Units will be prepared to control AAF acft on 140.58 mcs. It is the responsibility of the pilot desiring GCA assistance to establish communication with the appropriate control tower for preliminary approach instructions. The pilot will then be instructed as to the proper freq. for contacting the GCA Unit. Navy GCA Operational Units are located as follows: Whidbey Island NAS, Wash., Charlestown NAAS, R.I., Oakland NAS, Calif., Miramar MCAS, Calif., Seattle NAS, Wash., Olathe NAS, Kans., Oceana NAAS, Va., Patuxent River NAS, Md.

IFR CLEARANCE OF ARMY ACFT.: Except as outlined below, no Army acft will be cleared for instrument flight unless such acft is equipped with a low frequency radio receiver capable of reception in the 200 to 400 kc band. The BC-1206 (Detrola) receiver is not considered adequate as regards compliance with this directive. Acft not so equipped may be permitted to clear under IFR when the instrument type clearance is necessitated by reduced local visibility caused by fog, smoke, or haze, or when the flight will not be conducted under conditions which will require navigation by radio.

LORAN DATA: Loran is a long range electronic navigational aid utilizing pulse techniques. It provides accurate fixes for the user within 1 per cent of his distance from the stations. Loran service is provided continuously twenty-four hours a day. Loran operates on fixed frequencies of 1750, 1850 and 1950 kilocycles. To use Loran it is required that a Loran receiver-indicator be employed and that suitable charts and tables be available to the navigator. The following is a list of Coast Guard and Canadian Loran rates presently in operation: Atlantic: 1L-0,1L-1,1L-2,1L-3,1L-4,1L-7,1H-1 1H-2, 1L-1; West Coast U.S.: 2H-4, 2H-5, 2H-2; Aleutian Area: 1L-0, 1L-2; Central and Western Pacific: 2L-0,2L-1,2L-2,2L-3,4H-2,4H-3.4H-4,4H-5,1L-6,1L-7. Information regarding Loran coverage,rates,frequency, etc., throughout the world is contained in the Catalog of Loran Charts and Service Areas, Hydrographic Office Publication No. 1-L. This publication may be obtained from Hydrographic Office agents located in various cities in the United States or from the Hydrographic Office, Washington, D.C., at a cost of 30 cents. Complete Loran tables are contained in Hydrographic Office Publication Series No. 221, which can be obtained from the same sources at a cost of $3.00 per volume. Loran charts may be similarly obtained. Hydrographic Office Circular No. 3 and the Hydrographic Bulletin (issued weekly) give a list of these agents mentioned above and may be obtained without charge from the Hydrographic Office or any Branch Hydrographic Office. Information on changes or interruptions in Loran service of a temporary nature is sent to CAA for dissemination. Inquiries of an operational nature regarding Loran may be addressed to the Commandant (OAN), U.S. Coast Guard, 1300 E Street,N.W. Washington, D. C.

FOREIGN ENTRY PROCEDURES: Every U.S. citizen traveling abroad, except to Canada, Mexico, Alaska, Hawaii, Puerto Rico, and the Virgin Islands, requires a passport. The following procedures are necessary in order to gain entry, with intention to land, in Canada and Mexico:

CANADA: 1. All departures from the U.S. must be made from Airports of Entry (see next item). 2. If landing is to be made at a designated Canadian Airport of Entry, notice should be telephoned or telegraphed to the collector of customs at the predetermined point of entry when clearing U.S. Customs. 3. If entry is planned at a field other than a customs airport, arrangements should be made with the Secretary, Customs Division, Department of National Revenue, Ottawa, at least 10 days in advance. 4. Pilots and aircraft must be properly certificated and general observance of Canadian air regulations is required. 5. The following is a list of all Canadian Customs Airports of Entry: Whitehorse, Y.T.; Vancouver, B.C.; Calgary, Alta.; Lethbridge, Alta.; Moose Jaw, Sask.; Winnipeg, Man.; Ottawa, Ont. (Island or Malton); Hamilton, Ont.; Windsor, Ont.; Montreal, P.Q. (Dorval); Fredericton, N.B.; St. John, N.B.; Regina, Sask.

MEXICO: Applications for permits may be filed with the nearest Mexican consul who charges a fee of $4.00, or directly with the Department of Civil Aeronautics, Mexico City, Mexico, without charge. The permit will be sent directly to the Airport of Entry named in the application, unless the applicant specifically requests that it be sent to his home address. If entry is to be made from Brownsville, Tex., permission may be received from Representative of Mexican Ministry of Communication and Public Works, Department of Civil Aeronautics, Rio Grande Valley International Airport, Brownsville, Texas. All departures from the U.S. must be made from Airports of Entry. (see next item).

AIRPORTS OF ENTRY: Customs clearance into or out of the U.S. must be secured at Airports of Entry. Since there is insufficient traffic at most of these fields to justify resident customs personnel, advance notice must be sent to the Deputy Collector of Customs of the city in which the Airport of Entry to be used is located. The notice should state the day and approximate hour of exit or entry. Following are the Airports of Entry: International Arpt, Douglas, Ariz.; Nogales International Arpt. Ariz.; Calexico, Arpt, Calif.; Lindbergh Field, San Diego, Calif.; Meacham Fld, Key West, Fla.; Dinner Key Seaplane Base, Miami, Fla.; Miami International Arpt, Fla.; Midet Seaplane Base, West Palm Beach, Fla.; Caribou Arpt, Me.; Presque Isle Arpt, Me.; Detroit City Arpt., Mich.; Romulus AAF, Mich.; Sault Ste Marie Arpt, Mich.; Williamson-Johnson Fld, Duluth, Minn.; Duluth Boat Club Seaplane Base, Minn.; Cut Bank Airport, Mont.;

Great Falls Arpt, Mont.; Havre City-County Arpt, Mont.; Albany Arpt, N.Y.; Buffalo Arpt, N.Y.; Malone-Dufort Arpt, N.Y.; Massena Arpt, N.Y.; Ogdensburg Arpt, N.Y.; Ogdensburg Seaplane Base, N.Y.; Rochester Arpt, N.Y.; Rouses Point Seaplane Base, N.Y.; Watertown Arpt, N.Y.; Grand Forks Arpt, N.D.; Pembina Arpt, N.D.; Portal Arpt, N.D.; Cleveland Arpt, Ohio; Hinde Arpt, Sandusky, Ohio; Put-In-Bay Arpt, Ohio; Eagle Pass Arpt, Tex.; El Paso Arpt, Tex.; International Arpt, Brownsville, Tex.; Warren R. Austin Arpt, Swanton, Vt.; Bellingham Arpt, Wash.; Burlington Arpt, Vt.; City-County Arpt, Port Townsend, Wash.; Felts Fld, Spokane, Wash.; King County Arpt-Boeing Field, Seattle, Wash.; Lake Union Seaplane Base, Seattle, Wash. Baudette Arpt., Minn.

CUSTOMS REPORTS: In making flights TO or FROM a foreign country, civil fliers are required to report to a customs officer. If they do not report, they are subject to a civil penalty of $500.00 for each violation, and any aircraft used in connection with any such violation is subject to seizure and forfeiture, as provided for in the customs laws. On flights from foreign territory, the first landing in the United States is required to be made at an Airport of Entry, unless permission to land elsewhere than at an airport of entry is granted by the Commissioner of Customs, Washington 25, D.C. Consult the nearest customs officer before making foreign flights.

U.S. CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES: Although the CAA does not require special permission for the flight of U.S. aircraft abroad, or for the delivery of aircraft exported to foreign countries all aircraft must be registered and certificated as to airworthiness, and pilots must hold appropriate U.S. pilot certificates. The single exception to the above is: Special permission must be obtained from the Director, Aircraft and Components Service, CAA, Washington, D.C., for any flight into or through the Panama Canal Zone. In general, permission must be secured from foreign countries for the conduct of scheduled or non-scheduled operations from the U.S. Specific information may be secured from the Aviation Division, State Department. All air carriers must secure operating certificates from the CAA and their operations must be in conformance with these certificates. Although there are no Federal taxes on the exportation of aircraft from the U.S., it is mandatory that a license for such export be obtained from the State Department.

CANADIAN REGULATIONS FOR CFR FLIGHTS: (a) It is compulsory for pilots desiring to conduct a CFR flight to file a flight plan unless the flight will be made within a radius of 25 miles of the point of departure. (b) Arrival messages must be filed by pilot on all such CFR flights.

CANADIAN INSTRUMENT FLIGHT RULE FLIGHT: Pilots are cautioned to conform to the requirements of CAR 60.2 where flight is proposed to be conducted under Instrument Flight Rules from the United States into air traffic control areas designated in Canada. Failure to adhere to these regulations may result in detention of pilots concerned by Canadian Authorities.

PANAMA CANAL ZONE, FLIGHT INTO: Prior to take-off from any aerial port of embarkation of any aircraft flight into, or through, the 200 mile area blanketing the Canal Zone, Commanders of Military Aircraft will notify the CG 6th Fighter Wing, Attention: Fighter Controller, by an information copy of their flight plans. With a view to safety and protection of their equipment and personnel, operators of all other aircraft should follow the same procedure. Responsibility for this notification of flight plans lies with the operator, but notification will normally be transmitted by the clearance authority at the point of departure.

SAN JUAN, P.R., PRE-FLIGHT CLEARANCES: The Isla Grande Airport at San Juan, Puerto Rico, is a part of the U.S. Naval Air Station, San Juan. Commercial air carriers may not operate at this field without receiving specific authorization from the Chief of Naval Operations, Washington, D.C. The Commanding Officer NAS, San Juan, may grant permission for one or two isolated landings. In any case, proper authority must be obtained prior to landing at San Juan. Privately owned aircraft in a ferry status must obtain permission from the commanding officer before landing at Isla Grande Arpt.

CARIBBEAN AREA-RADIOBEACONS FOR USE WITH ADF: The following Coast Guard Radiobeacons now operate continuously in their assigned sequence, i.e., one minute on, two minutes off, 24 hours daily:

II San Juan 296 . - . . Lat 18-24-14 N, Long. 66-07-03 W
I Goat Island (Jamaica) 304 . . - . Lat 17-53-00, Long. 77-04-14 W
I Trinidad 308 - - - . Lat 10-41-23 N, Long. 61-44-44 W

It is requested that all ships and aircraft using these beacons submit comments to the Commander, 10th Coast Guard District, Arsenal, Marina, San Juan, P.R., as to usefulness with ADF equipment, bearing accuracy obtainable, maximum usable range, ease of identification, etc.

DISCONTINUANCE OF CERTAIN OR ALL OPERATIONS AT CAA COMMUNICATIONS STATIONS: (A) The following communications stns will discont. or have discont. operations (all voice or code communications, weather reporting service, radio receiving watches), except radio range or homing facilities (all H and MH facilities will operate continuously without voice), on the following dates:

McCool, Ind., 12-28-46; Houlton, Me., 1-12-47; Lebanon, N.H., 1-12-47; Dansville, N. Y., 1-12-47; Dunkirk, N. Y., 1-12-47; Glens Falls, N. Y., 1-12-47; Ashley, N.D., 12-28-46; Archbold, Ohio, 12-28-46; Brookville, Pa., 1-12-47; Sunbury, Pa., 1-12-47; Wilkes Barre, Pa., 1-12-47; Providence, R.I., 1-12-47; Alice, Tex., 12-18-46; Clarendon, Tex., 12-18-46; Palacios, Tex., 12-18-46; Yoakum, Tex., 12-18-46; Danville, Va., 1-12-47; Montpelier, Vt., 1-12-47

(B) The following CAA Communications Stns will be shut down or have shut down and all facilities discontinued on the following dates:

Evergreen, Ala., 12-15-46; Gooding, Idaho, 12-5-46 ; Milroy, Ind., 12-28-46; Lamoni, Iowa 1-1-47; Montezuma, Iowa, 1-1-47; Cassoday, Kans., 1-1-47; Coffeyville, Kans., 1-1-47; Warsaw, Ky. 12-28-46; Cadillac, Mich., 12-28-46; St.Ignace, Mich., 12-28-46; Lake City, Minn., 12-28-46; Big Spring, Nebr., 1-1-47; Overton, Nebr., 1 -1-47; Anton Chico, N. Mex., 12-18-46; Socorro, N.M., 12-28-46; Golva, N.D., 12-28-46; Cherry Fork, Ohio, 12-28-46; Port Clinton, Ohio, 12-28-46; Anderson, S.C., 12-15-46; Lane, S.C., 12-15-46; Philip, S.D., 1-1-47; Spearfish, S.D., 1-1-47;
Sulphur Springs, Tex., 12-18-46; Stevenson, Wash., 12-9-46.
Custer, Mont., 12-5-46; La Grande, Oreg., 12-5-46; Ontario, Ore., 12-5-46; Easton, Wash., 12-5-46; Kelso, Wash.; 12-9-46.

N.B. Weather teletype reports will continue to be available at the following stations from Weather Bureau personnel: Stevenson, Wash., Anniston, Ala., Providence, R.I.

NORTH ATLANTIC OCEAN STATION VESSELS: Effective Jan. 15, 1947, the Coast Guard advised that VHF guard on board North Atlantic Ocean Station Vessels was changed from 116.1 to 140.58 mcs.

GUARDING OF 3117.5 KCS BY CAA AIRWAY COMMUNICATIONS STATIONS: All airway communications stations located at points also served by CAA airport traffic control towers discontinued continuous listening watches on 3117.5 kcs. Hereafter, communications stations at these locations will establish watches on 3117.5 kcs upon "request" and during such hous as the associated tower is closed.

NEW PRIVATE FLIER FREQUENCIES: In the near future, all CAA Communications Stations will begin to guard 122.1 mcs and CAA operated towers 122.5 mcs. These are the new freqs. assigned for private fliers' use for Air-ground Communications. Simultaneously, the guard on 131.9 and 131.7 mcs. will be discontinued.

PRE-FLIGHT SERVICE: Pilots desiring to file flight plans are requested to do so with any CAA Airway Communications Station by personally visiting the station or by telephone. Radio should be used for filing flight plans only as a last resort. Pilots are urged to visit communications station to obtain authentic flight information and assistance in planning their flights. Personnel at these stations are trained to render flight planning assistance. An objective of CAA pre-flight service is to encourage pilots to familiarize themselves with flight conditions prior to commencing cross country flight.

NEW YORK OCEANIC AIR TRAFFIC CONTROL PROCEDURES: For the information of those agencies intending trans-oceanic operations in the New York Oceanic Control Area and which are not in possession of PICAO manuals for procedures the following is promulgated: The New York Oceanic Airway Traffic Control Area has been activated in accordance with PICAO directives and New York Oceanic Traffic Control Operations Letter No. 1.

This area is bounded on the N by the 43rd parallel, on the E by the 45th meridian, on the S by the 30th parallel, on the W by a line paralleling the E Coast of the U.S. 100 nautical miles off-shore.

All aircraft operating therein must do so under an approved instrument flight plan, the composition of which follows: aircraft registration, aircraft radio call, type of aircraft, person in command, point of departure, cruising altitude, route of flight, point of first intended landing, proposed true airspeed, transmitting and receiving frequencies, proposed or actual departure time, estimated elapsed time to arrival point, alternate airdrome, amount of fuel in pounds, any other pertinent data deemed necessary for control purposes. Flight plans shall be addressed to New York Ocean Control (preferably through WSY, New York) prior to entering this area.

Position reports transmitted by radiotelegraphy will be composed in the following abbreviated form: the position will be determined as soon as practicable after the first hour of flight and each hour thereafter, and the reports transmitted to the ground station at the earliest opportunity. Standard position reports shall be in the following form: U G G G G Q L L L L Long Long Long Long PD Fox Charlie Tare 1 Tare 2 Tare 3 and Sugar 1 Sugar 2 Sugar 3 How 1 How 2 How 3 Fox 1 Fox 2 Fox 3 Fox 4 Fox 5.

Position report code Uncle, indication by one figure of the system of units utilized according to the following: zero for metric system five for English system. George indication of time given in hour figures based on GMT. Queen indication by one figure of octane in which aircraft is situated according to the following: N lat zero equals 0° to 90°; W one equals 90° W to 180°; two equals 180° to 90° E; three equals 90° E to 0°; S lat five equals 0° to 90° W; six equals 90° W to 180°; seven equals 180° to 90° E; eight equals 90° E to 0°. Love indication of lat. in four figures (degrees and minutes); long. indication of longitude in four figures (degrees and minutes) dropping hundredths degrees. Peter Dog indication by one figure of means used to determine the position according to the following: one equals dead reckoning; two equals single position line; three single radio bearing position line; four equals radio fix; five equals celestial fix; six equals visual or ground fix; seven equals Loran or console fix; eight equals radar fix George Easy Easy; nine equals celestial and radio fix. Fox Charlie indication by one figure, flight conditions according to the following: zero equals visual flight rule at all levels; one equals visual flight low clouds; two equals on top; three equals between layers; four equals medium icing; five equals heavy icing; six equals in and out of clouds twenty five percent IFR; seven equals ditto fifty per cent IFR; eight equals in and out of clouds seventy-five per cent IFR; nine equals continuous IFR. Tare one, tare two, tare three indication of true track in degrees given in three figures. Tare one equals hundredths; tare two equals tenths; tare three equals single unit. Sugar one, sugar two, sugar three indication of ground speed in three figures, sugar one in hundredths; sugar two equals tenths; sugar three equals single unit. How one, How two, How three indication of altitude in three figures. How one equals ten thousands of feet or thousands of meters; How two equals thousands of feet or hundreds of meters; How three equals hundreds of feet or tenths of meters. Fox one, Fox two, Fox three, Fox four, Fox five weight of fuel used given in five figures. Fox one equals ten thousands; Fox two thousands; Fox three hundredths; Fox four equals tenths. Fox five equals single units. Units to be used ground speed; metric system kilometers per hour, English system knots; altitude: metric system tenths of meters, English system hundreds of feet; weight of fuel; English system pounds.

Example message: "Zero one four one five zero three zero four five five three three zero seven two two nine zero three two five one two five zero two four five zero", meaning "at one four one five GMT, position lat. thirty degrees forty five minutes N, long. 53° 30' W Loran or Console determined position - on top - true track 290° - groundspeed 325 M.P.H. - altitude 12,500' - weight of fuel used 2450 lbs."

Position reports should be addressed to New York Ocean Control. Position reports transmitted by radio telegraphy should be directed to WSY if possible. If military aircraft are not equipped to transmit on PICAO frequencies to give their position, reports will be directed to a military air/ground station suitably equipped to relay messages to New York Ocean Control. Publications outlining PICAO procedures for air navigation services are available in Publications and Document Section, Dominion Square Building, Montreal, Canada. New York Oceanic Traffic Control Operations Letter No.1, available New York Airway Traffic Control Center, La Guardia Field.

All flights operating in the New York Oceanic Control Area will be cleared at the following altitudes: Magnetic headings of from 0° to and including 179°, odd thousand foot levels. Magnetic headings of from 180° to and including 359°, even thousand foot levels.

NEW YORK OVERSEAS FOREIGN AERONAUTICAL STATION: Effective Dec. 4, 1946, the broadcast of navigation reports by WSY changed times of transmission and added the frequencies as follows: at 0200, 0400, 0600, 0800, 1000 and 1200 GMT broadcast is made simultaneously on 3380, 8720 and 12395 kcs. At 1400, 1600, 1800, 2000, 2200, and 2400 GMT, broadcast will be made simultaneously on 3380, 5960, 8720, 12395 and 16250 kcs. Form and contents of broadcast remain unchanged. Concurrently, the hourly metar and notam broadcast are transmitted at 55 minutes past each hour between the hours of 0055 through 1155 GMT on 3380, 8720, and 12395 kcs. and between the hours of 1255 and 2355 GMT on 3380, 5960, 8720, 12395, and 16250 kcs. Contents of the metar and notam broadcast remain unchanged. The broadcast at 25 minutes past each hour was discontinued. Comments concerning the effectiveness of the above services will be appreciated.

AIRPORT APPROACH ZONES AND AIRPORT TRAFFIC ZONES CFR MINIMA: Part 60 specifies that CFR traffic within Airport Traffic Zones or Airport Approach Zones must maintain 500' vertical and 2000' horizontal separation from the clouds unless given traffic clearance by the control tower or control center concerned. Even under such clearance CFR flights must remain clear of clouds. These airport traffic zones and airport approach zones are indicated on the Flight Planning Charts of the Airman's Guide, and all recently revised Coast and Geodetic Survey Aeronautical Charts. In the interest of safety CFR flights must maintain the 500' and 2000' minima specified above while in these circular charted zones. (See page VIII of this publication for air traffic control procedures and weather minima).

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded. To reduce the number of such complaints, it is requested that the following practices be put into effect by all fliers:

1. Discontinue all unnecessary low flying.
2. When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas.
3. Re-route channels of approach and departure to avoid residential and business districts whenever possible.
4. If the airport is located near inhabited areas, reduce power and increase pitch

or propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum.

5. Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

REDESIGNATION OF CIVIL AIRWAYS: Effective January 15, 1947, Part 600.1 of the Regulations of the Administrator was amended to read in whole or in part as follows:
Section 600.10001 Green Civil Airway No. 2 (Seattle, Wash., to Boston, Mass.)... Bozeman, Mont. radio range station; the intersection of the SE leg of Bozeman, Mont. range and the W leg of Livingston, Mont. range; Livingston, Mont. range station..
Section 600.10004 Green Civil Airway No. 5 (Los Angeles, Calif., to Boston, Mass.). . . . Gordonsville, Va. range station; the intersection of the NE leg of Gordonsville, Va. and the S leg of Washington, D.C.; a point at lat. 38-41-50, long. 76-51-47; Millville, N. J. range station, the intersection of the NE leg of Millville, N.J. and the SW leg of Mitchel Field, N.Y. (Army); Mitchel Field, N. Y.(Army) range station; the intersection of the NE leg of Mitchel Field, N.Y. (Army) and the SW leg of Boston, Mass., to Boston, Mass. (Logan) Airport.
Section 600.10101 Amber Civil Airway No. 2 (Long Beach, Calif., to Fairbanks,Alaska). . . . Pocatello, Idaho range station; Idaho Falls, Idaho range station; DuBois, Idaho range station; . . .
Section 600.10237 Red Civil Airway No. 38 (Big Spring, Tex., to San Antonio, Texas). . . . San Angelo, Texas, range station to the intersection of the SE leg of San Angelo, Texas and the SE leg of Bi g Spring, Texas.
Section 600.10244 Red Civil Airway No. 45 (Washington, D.C., to Allentown, Pa.) . . . Baltimore, Md. range station to the intersection of the N leg of Baltimore, Md. and the SW leg of Allentown, Pa.
Section 600.10248 Red Civil Airway No. 49 (Elko, Nev. to Ft. Bridger, Wyo.). From Elko, Nev. range station via Wendover, Utah range station; . . .
Section 600.10253 Red Civil Airway No. 54 (Burley Idaho to Salt Lake City, Utah). From the Burley, Idaho range station to a point located at N lat 40-56 and W long. 112-16.
Section 600.10313 Blue Airway No. 14 (El Centro, Calif.to Bakersfield, Calif.). From Mt. Laguna, Calif. non-directional radio marker beacon to Oceanside, Calif.. non-directional radio marker beacon. . .
Section 600.10319 Blue Civil Airway No. 20 (Millville, N. J., to Allentown, Pa.). From Millville, N. J. range station via the intersection of the NW leg of Millville, N.J. and the SW leg of Philadelphia, Pa., the Philadelphia, Pa. range station...

REDESIGNATION OF RADIO FIXES: Effective Jan. 15, 1947, Part 601.4 of the Regulations of the Administrator was amended in whole or in part as follows:
Section 601.4005 Green Civil Airway No. 5 (Los Angeles, Calif., to Boston, Mass.). Los Angeles, Calif. range station; Riverside, Calif. range station; Blythe, Calif. range station; Phoenix, Ariz. range station; Tucson, Ariz. range station; Rodeo, N.M. range station; Columbus, N. M. range station; Harrington Ranch fan type radio marker station or the intersection of the W leg of El Paso, Tex. and the S leg of Engl e, N. M. range; El Paso, Tex. range station; Salt Falt, Tex. range station; Wink, Tex. range station; Big Spring, Tex. range station; Abilene, Texas range station; Ft. Worth, Tex. range station; Texarkana, Ark. range station; Memphis, Tenn. ragge station; Jacks Creek, Tenn. range station; Nashville, Tenn. range station; Smithville, Tenn. range station; Knoxville, Tenn. range station; Tri-City, Tenn range station; Pulaski, Va. range station; Roanoke, Va. range stn.; Gordonsville, Va. range station; Doncaster, Md. fan type radio marker station or the intersection of the NE leg of Gordonsville, Va. range and the S leg of Washington, D.C. range; Millville, N. J. range station.
Section 601.4017 Amber Civil Airway No. 7 (Key West, Fla. to Caribou, Me.). ...Charleston, S.C. range station; Florence, S.C. range station; Raleigh, N.C. range station; Washington, D.C. range station; the intersection of the NE leg of Washington, D.C. and the W leg of Baltimore, Md.; Newark, N. J. range station.
Section 601.40245 Red Civil Airway No. 45 (Washington, D.C. to Allentown, Pa.). No radio fix designation.
Section 601.40249 Red Civil Airway No. 49 (Elko, Nev. to Ft. Bridger, Wyo.). Wendover, Utah range station.
Section 601.40254 Red Civil Airway No. 54 (Burley, Idaho to Salt Lake City, Utah). No radio fix designation.
Section 601.40314 Blue civil Airway No. 14 (El Centro, Calif. to Bakersfield,Calif.). No radio fix designation.
Section 601.40320 Blue Civil Airway No. 20 (Millville, N. J. to Allentown, Pa.). No radio fix designation.

AIRWAY TRAFFIC CONTROL AREA: Effective Jan. 15, 1947, Part 600.1 of the Regulations of the Administrator was amended to read as follows:
Section 601.1005 Green Civil Airway No. 5 A.T.C. Areas (Los Angeles, Calif., to Boston, Mass.). All of Green civil airway No. 5.
Section 601.10245 Red Civil Airway No. 45 A.T.C. Areas (Washington, D.C., to Allentown, Pa.). All of Red civil airway No. 45.
Section 601.10249 Red Civil Airway No. 49 A.T.C. Areas (Elko, Nev., to Ft. Bridger, Wyo.). All of Red civil airway No. 49.
Section 601.10254 Red Civil Airway No. 54 A.T.C. Areas (Burley, Idaho to Salt Lake City, Utah). All of Red civil airway No. 54.
Section 601.10314 Blue Civil Airway No. 14 A.T.C. Areas (El Centro, Calif., to Bakersfield, Calif.). All of Blue civil airway No. 14.
Section 601.10320 Blue Civil Airway No. 20 A.T.C. Areas (Millville, N.J., to Allentown, Pa.). All of Blue civil airway No. 20.

CIVIL USAGE OF MILITARY FIELDS: Army and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

PERSONAL POSSESSION OF PILOT CERTIFICATES: Effective Feb. 15, 1947, Part 43.400 of the Civil Air Regulations will be amended to read as follows:

43.400 Pilot Certificates: No person shall pilot a civil acft within the U.S. unless he holds a valid pilot certificate with appropriate ratings issued by the Administrator or an appropriate and valid foreign pilot certificate. Such certificate shall be in the personal possession of the pilot at all times while piloting aircraft and shall be presented for examination to any inspector of the Administration or State or local law enforcement officer upon the request of such inspector or enforcement officer.

EXCHANGE OF CERTIFICATES: Effective Dec. 24, 1946, Part 20.55 of the Civil Air Regulations was amended to the following: "A private or commercial pilot certificate which was effective on or after Jan. 1, 1942, and which was issued prior to July 1, 1945, will expire on July 1, 1947. Such certificate may be exchanged at any time prior to July 1, 1947, for a pilot certificate and the appropriate ratings provided for in this part".

LOW FLIGHT OVER FUR RANCHES: Numerous complaints have been received regarding low flying over fur ranches. This low flying, especially during mating season, has resulted in very definite dollar and cents losses to fur breeders. They request that pilots avoid flying over their ranches, particularly at low altitudes, stating that the ranches can be identified by the large number of small animal inclosures or pens.

LONG DISTANCE DOMESTIC SCHEDULED AIR CARRIER OPERATIONS: Special Civil Air Regulation 361-A has been amended by extending it until June 15, 1947. The Regulation follows: Flights of scheduled air carriers while at altitudes in excess of

12,500' above sea level E of long. 100° W and 14,500' above sea level W of long. 100° W shall comply with the applicable provisions of the Civil Air Regulations except as follows:

(a) Such flights need not comply with the requirements of Part 60.22 Right-side traffic, Part 61.731 Deviation from Airway, or any other sections of Parts 40 and 61 concerning civil airways.

(b) Such flights need not comply with the requirements of Part 60.252 Traffic clearance, Part 60.253 Communication contacts, and Part 61.602(c) Weather Reports, except to the extent which the Administrator may prescribe.

(c) Each first pilot engaged in these operations shall be qualified for the route if he is qualified for operations over any regular authorized route for the air carrier involved between the regular terminals for such operation.

(d) Each dispatcher who dispatches aircraft on flights authorized by this regulation shall be qualified under Part 61.533 of the Civil Air Regulations for operation over an authorized route for the air carrier involved between the regular terminals of such operations: Provided, that when he is qualified only on a portion of such route he may dispatch aircraft only after coordinating the dispatch with dispatchers who are qualified for the other portions of the route between the points to be served.

DIFFERENTIATION OF NUMBERS ON PARTS 04: Since the Board on Nov. 9, 1945, adopted an entirely new Part 04 of the Civil Air Regulations, and inasmuch as the previous Part 04 will remain effective indefinitely for certain aircraft, some confusion is possible in differentiating the two parts when these parts are referred to merely by their number. THEREFORE, effective Nov. 22, 1946, Part 04 of the Civil Air Regulations as promulgated on November 9, 1945, was amended by changing the number of said Part from 04 to 04b and by altering accordingly all sections contained therein.

INSTRUMENT APPROACH PROCEDURE MINIMA: Part 61.752 of the Civil Air Regulations was amended Jan. 10, 1947, and now reads as follows: "61.572 No instrument approach procedure shall be executed or landing made at an airport when the latest U.S. Weather Bureau weather report for that airport indicates the ceiling or visibility to be less than that prescribed by the Administrator for landing at such airport"

AERONAUTICAL CHART AND PUBLICATIONS CORRECTIONS: (a) Correct Decker's Airport Guide, Page 64, of Zone 5, by deleting all reference to servicing and civilian availability. The field is closed to all fliers.

(b) Correct "TO-06-15-1", Chart 99, by deleting operation of radar beacon at Clovis AAF, N. Mex.; Chart 62, by changing elevation of Pyote AAF, Texas to 2612', Chart 95, by showing air to ground frequency of 4495 kcs CW in operation at Medford, AF, Ore. in addition to other published frequencies.

(c) Correct Great Falls Flight Planning Chart 6 in Airman's Guide, Vol. 1, No. 21, by showing McDonald Pass FM identification as four dashes (- - - -).

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporarily inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide", full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids. These teletype notams are posted in CAA Communications Stations and in all Army Air Field and Naval Air Station Operations Offices having teletype drops.

N.B. AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off. (b) Planes without receivers, when approaching tower-controlled fields and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AAF Regulation 100-4, dated March 4, 1944, and CAR Digest or Manual 60). (c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons coupled with flashing red code lights, indicate suspension of CFR traffic.

AIR NAVIGATION AID DATA

All radio facilities except towers are C.A.A. facilities unless otherwise cited. All towers are listed by operating agency. All range bearings are magnetic inbearings. All fan markers and station location markers operate on 75 mcs. All radio facilities operate continuously unless otherwise specified.

LEGEND

SOLON SPRINGS ARPT-Const-unusable. (10-29)
STEVENS POINT AIRPORT-Use rnwys only. (8-9)
TAYLOR CO. ARPT (MEDFORD)-Avail. in emerg only. Very rough. Maintained for small acft only. (6-6)
TOMAH AIRPORT-N/S strip under const. (7-9)
TRUAX FLD(MADISON)-Use rnwys only. Grass area 75' wide adj to rnwys rough, bal of grass areas unsafe and rough. Fld lgts and svcg not avail. 0030 to 0730.
VETERANS FLD(MENOMONIE)-Rough. (1-2)
WAUKESHA CO. ARPT-Acft turn left after landing and taxi on right side of strip. (12-13)
WINNEBAGO CO. ARPT (OSHKOSH)-Use N/S, E/W rnwys only. (1-8)

[redacted]

CASPER AAF-RADIO: Army air to ground stn. temp. inop. (11-20)
CHEYENNE ARPT-Equip. on fld days. Lgtd bldg between E/W rnwy and taxi strip, 1000' from E end. (1-1)
FORT BRIDGER INT, SITE 9, SL-OH-Hazardous to all acft (snow).(1-13)
JACKSON MUN. ARPT-Cattle on fld intmtly. (5-20)
KNIGHT INT, SITE 6, SL-OH-Soon will be decomm. Bcn will remain in oper as airways bcn with course lgts changed from green to red. (10-20)
SHERIDAN CO. ARPT-N/S rnwy unsafe heavy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Stay on pavement. Equip. on fld. (12-31)
WARDWELL FLD(CASPER)-Use rnwys, taxi strips only-bal fld rough. 30 million candle pwr ceilometer projector 1000' N of bcn. (10-30)

New editions of the charts listed below will be published in about one month, making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum for immediate requirements. As soon as the charts are available for distribution a second notice will appear in this publication.

Albany, Boston, Douglas, New York
WAC 309
21 DF
FC 175, 177, 214.

A new edition (or chart) of the charts listed below which make former prints obsolete is now available for use. Former prints should be destroyed or stamped "OBSOLETE FOR USE IN AVIATION."

For new editions, see attached list.

When ordering charts from the U. S. Coast and Geodetic Survey, correct remittances should accompany all orders. Sectional charts should be ordered by name; World Air charts by number with the prefix (WAC); Approach and Landing charts by number with the prefix (AL); Route charts by number with the prefix (FC). The above charts are priced at 25 cents each with the exception of Approach and Landing charts which are priced at 10 cents each.

U. S. Coast and Geodetic Survey Dates of Latest Prints

Dates in small type indicate minor changes which are not of sufficient importance to make the previous print obsolete. All charts carrying dates older than those shown in large type on this list are obsolete for use in flight.

AIR NAVIGATION RADIO AIDS

LEGEND

(3) - Station guards 3105, 4495, 6210 kcs.
(4) - Station guards 3106, 4495, 6210, 3117.5 kcs.
(7-24) - Hours of operation (7 A M. to midnight) on a 24-hour clock basis
→ - New or revised data *

RADIO CLASS DESIGNATIONS

AC.....Approach Control Tower, CAA
B.....Scheduled Broadcast Station (broadcasts weather reports at 15 and 45 minutes after the hour unless otherwise cited)
C.....Control Tower, CAA
CA.....Control Tower, Army
CL.....Control Tower (City,County,Private, etc.)
CN.....Control Tower, Navy
D.....Distantly controlled
FM.....VHF fan type marker (100 watts)
FMK.....Compass locator station when combined with fan marker
GCA.....Ground control approach system
H.....Non-directional radio-beacon (homing), power 50 watts or more
ILS.....Instrument Landing System
IM.....VHF boundary marker
K.....Independent compass locator station
LFM.....VHF fan type marker, low powered (5 watts not over 10 miles from range)
MH.....Non-directional radio-beacon (homing), power less than 50 watts
ML.....Range (loop radiators), power less than 50 watts
MM.....VHF middle marker
MMK.....Compass locator station when combined with middle marker of Instrument Landing System
MRA.....Range (adcock, vertical radiators),power more than 50 less than 150 watts
MRL.....Range (loop radiators), power more than 50 less than 150 watts
OM.....VHF outer marker
OMK.....Compass locator when installed at outer marker site or within 5.5 miles of middle marker
P.....Point to point radio
RA.....Range (adcock, vertical radiators),power 150 watts or more
RL.....Range (loop radiators),power 150 watts or more
S.....Simultaneous (range signals and voice) type of transmitter
T.....Teletype
TX.....Principal teletype
V.....Voice communication with aircraft
VAR.....Visual-aural VHF range
W.....Without voice facilities
Z.....VHF station location marker at a range station

N.B. Variation is computed at the station. The distance from station to field is computed from the center of the range station to the nearest edge of the usable area of the airport. The bearing is that from the range station to airport or fan marker.

AIRWAY RADIO COMMUNICATIONS

GENERAL

All radio range stations (class RA, RL, MRA, MRL, ML) emit directional signals (type A2 emission) 1020 cycles per second modulation.

All radiobeacon stations (class H and MH) emit non-directional signals (type A2 emission) 1020 cycles per second modulation. Unless otherwise noted, all stations, other than class MH, operate continuously within their assigned hours of service except during interruptions for voice transmission on the same frequencies where simultaneous transmission is not available and during shutdowns for maintenance purposes. Class MH stations operate on request unless otherwise cited. The effective range of an MH facility is ordinarily 25 miles.

Compass locators are low-powered nondirectional facilities operating in the 200-415 kc. band. They are installed near airports to make it easier for pilots to make instrument approaches. When holding is required, they also help the pilot follow a more precise holding pattern. Compass locators, however, should not be depended upon as long range navigational aids since they are rarely useful at distances of over 15 or 20 miles.

Voice communications facilities are available unless "W" (without voice) is included in the classification. Examples: SMRAW, MRLW, HW, HWT. Transmission of voice on a frequency other than the range frequency is indicated as MRLW-V. When no "W" is included in station class, the "V" indicates voice feature on two frequencies, namely, range frequency and, generally, VHF of 116.1 mcs.

The classification designation "B" denotes that the station broadcasts airway and meteorological information on a scheduled basis at 15 and 45 minutes past each hour unless otherwise cited.

All Civil Aeronautics Administration stations equipped for voice communications with aircraft stand continuous listening watches on the frequencies of 3105, 4495, and 6210 kcs., unless otherwise cited.

* AT THE BOTTOM OF THE LAST COLUMN, UNDER THE HEADING OF NEW RADIO FACILITIES, BORDERED BY TINTED LINE WILL BE FOUND, OUT OF ALPHABETICAL ALIGNMENT, ALL THE NEW RADIO FACILITIES TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

N.B. For Digest of A.T.C. and Communications Procedures, *see FLIGHT INFORMATION MANUAL*

AIRPORT DATA
LEGEND

NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport owned or leased in whole or in part by Army
(CG) Airport owned or leased in whole or in part by Coast Guard
(N) Airport owned or leased in whole or in part by Navy
★ CAA Intermediate Field
(P) Non-military airport available for use by military aircraft (See Note 3)

N.B. If the airport name is followed by (A) for Army, (N) for Navy, or (CG) for Coast Guard, the field is exclusively an Army, Navy, or Coast Guard field. If the field is not exclusively Army, Navy, or Coast Guard and may be used by civilians, no (A), (N), or (CG) follows the airport name.

SIZE — CLASS

40: Length of longest landing strip (unpaved) in hundreds of feet
40h: Length of longest hard-surfaced runway in hundreds of feet (Seaplane landing areas over 5 miles in length are classified as unlimited and indicated as "unl.")

N B Only the length of the longest runway is cited, and its direction is not indicated. Space restrictions occasioned this policy, but logic justified it. The logical assumption may be made that runways have been laid out in accordance with the local wind rose. Therefore, in all calms, or gentle-angling winds, or winds aligned with the longest runway, the longest runway will be used. When a wind not aligned with the longest runway is of such intensity that the longest runway cannot be used, this wind makes the use of runway aligned with the wind, even though much shorter than the longest runway, sufficiently long from a safety viewpoint. Too, prior knowledge that there is, for example, a NW SE runway is of little value to a pilot if, when he arrives over the field the wind is blowing too strongly from another direction to use that runway. Finally, the larger the number indicating the longest runway length, the greater is the assurance of a sufficient number of runways for all-wind coverage.

RADIO

R1: Voice availability via tower, range (or homing device), or voice station.
R2: Range (or homing device), and tower
R3: Range (or homing device), tower, and instrument landing system.

LIGHTS

L: Incomplete lighting, either flood or portable runway lights.
L1: Beacon only.
L2: Beacon and boundary.
L3: Beacon, boundary, and obstruction.
L4: Beacon, boundary, obstruction, and flood.
L5: Beacon, boundary, obstruction, flood, and runway contact
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach.
(L5): High intensity runway contact lights
(L6): High intensity instrument approach lights

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel.
S2: Fuel, storage.
S3: Fuel, storage, minor aircraft repairs.
S4: Fuel, storage, minor aircraft, and minor engine repairs.
S5: Fuel, storage, major aircraft, and minor engine repairs.
S6: Fuel, storage, major aircraft, and major engine repairs.

N B Very often small civilian fields (particularly in non-metropolitan areas) will have no full-time attendant. Frequently servicing at such fields in isolated communities is available only by circling the town to attract the operator's attention.
These fields are often recognizable by airport class, comparable to, for example, "1S S1". "1S S1" suggests that the field is not too large, and that the field may not have a full-time attendant even though fuel is stored there.
Lack of radio or lighting facilities, indicated by the absence of an "R" or "L" in the airport class, is a further indication that a full-time attendant may not be available. Absence of an "S" (servicing) indicates definitely that fuel, if available at all, is available only by truck from town. Any field carrying no indication of radio (R), lights (L), or servicing (S) in airport class column should be used with caution, especially a field of the small category. Fields of this nature may be inactive or not maintained, and thus dangerous for use.

NOTES

1. "(NC)" not charted. Indicates not charted because of insufficient data or inability to verify
2. New or revised data. ✱
3. "(P)" in CITY-AIRPORT NAME column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the United States Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the War Department.
4. "Effingham Int., 10, LS-ID" in CITY-AIRPORT NAME column indicates that the airport is Effingham CAA Intermediate Field, Site 10, on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the CAA are listed similarly except that there is no ★ = fixed star or "Int."
5. In Location column, the word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.
6. In Remarks column:
   (a) "91 oct." indicates octane rating of fuel available.
   (b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.
   (c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway.
   (d) "TEMP INACTIVE. NO FACS" indicates AAF airfields used either exclusively by the AAF or municipal airfields used jointly by the AAF and civil interests at which both the Army and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned (See Special Notice).
   (e) "ARMY TEMP INACTIVE. CIVIL FACS." indicates municipal airfields used jointly by the AAF and civil interests at which the Army facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.
   (f) "PRIVATE" indicates field is available for owner only, and not to be used by others except in emergency.
   (g) OBSTRUCTIONS. Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines are cited.
   (h) "Fld lgts on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly, the field lights, indicated for such a lighted field (and, in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.
   (i) "FEE" indicates landing fee for private aircraft.
7. Airline stop airport names are capitalized.

FLIGHT PLANNING CHARTS
LEGEND

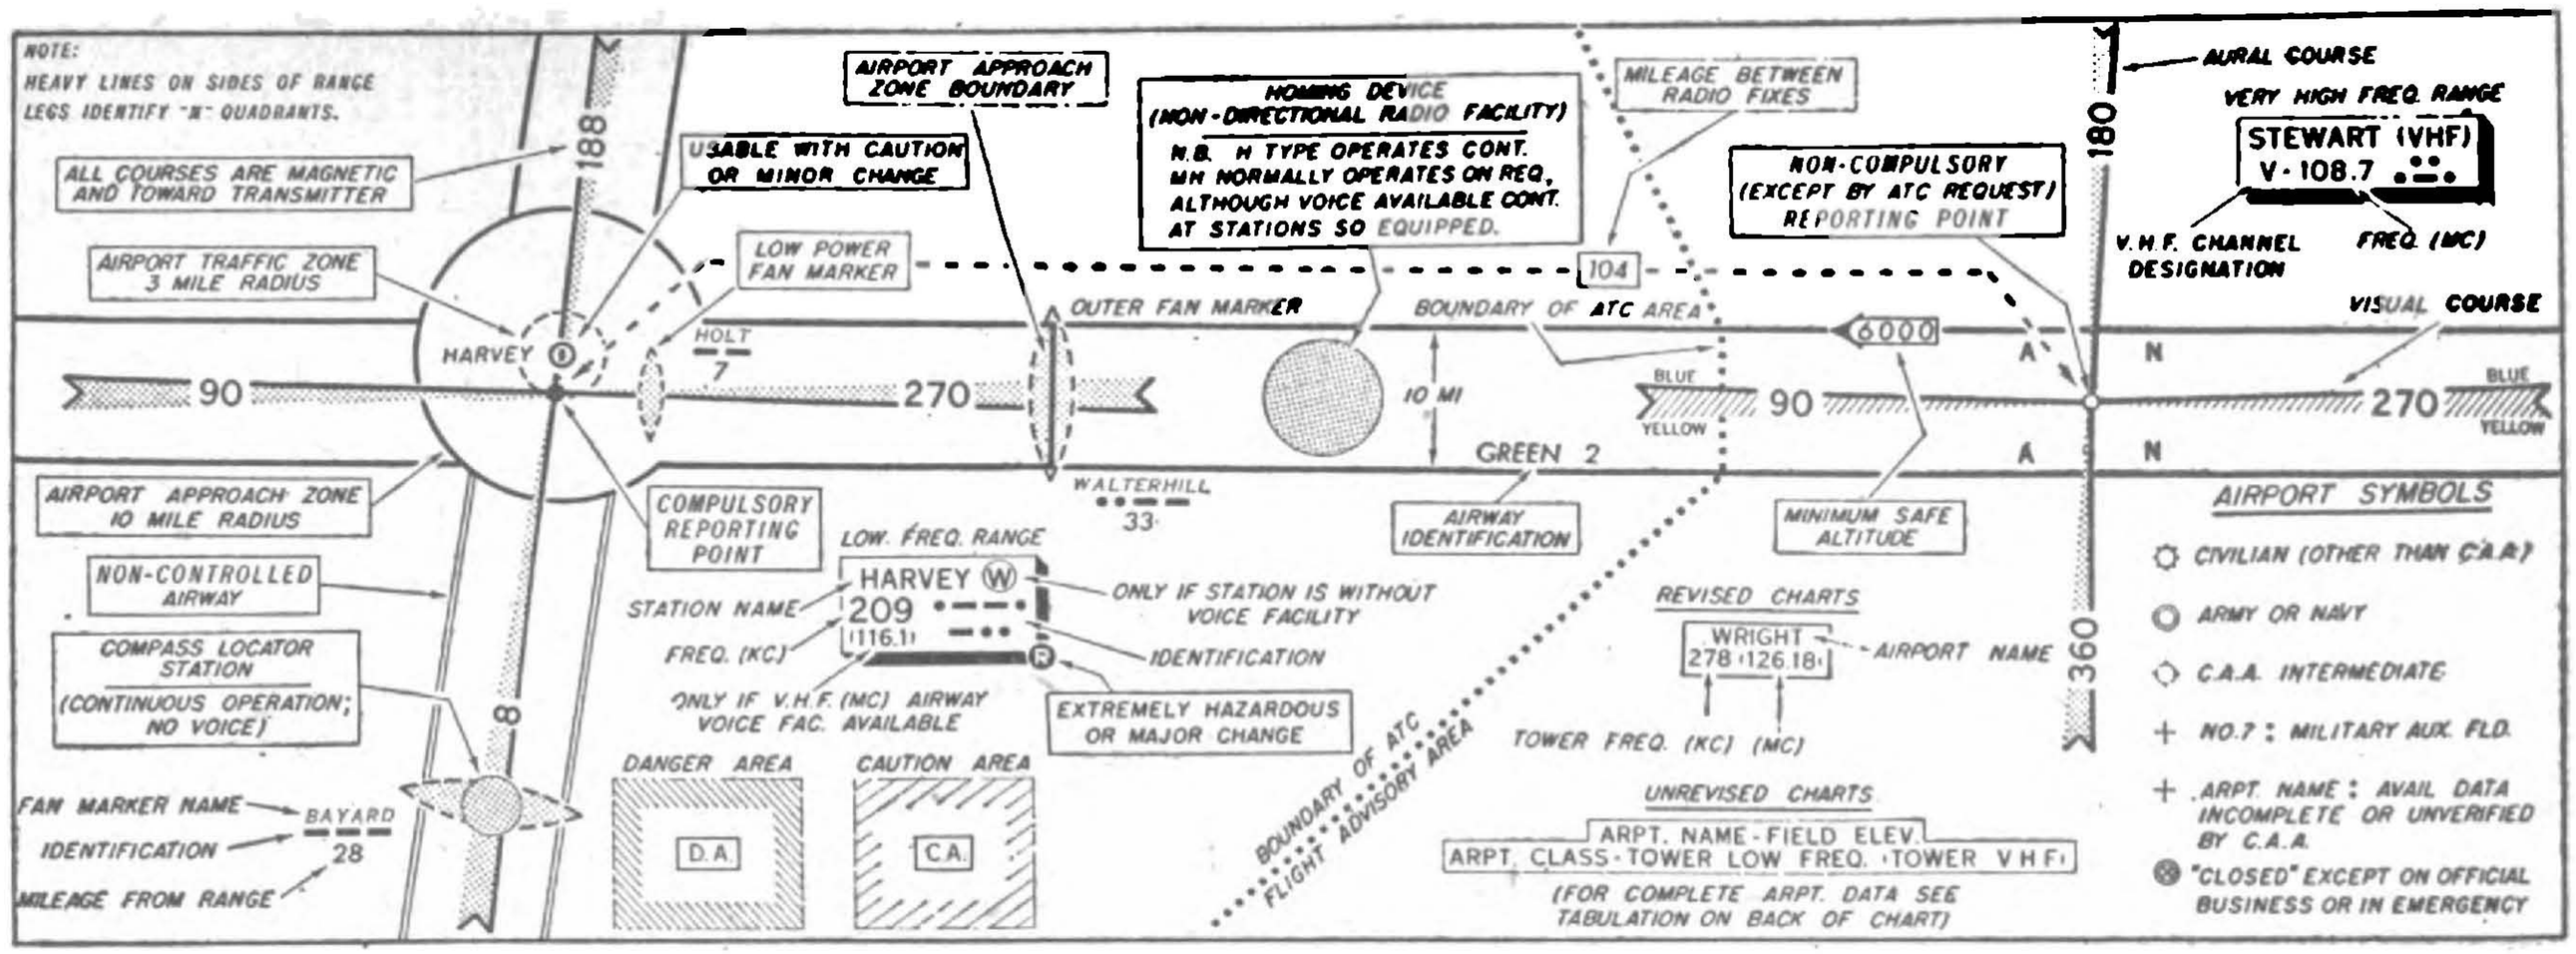

CHART CONTENTS

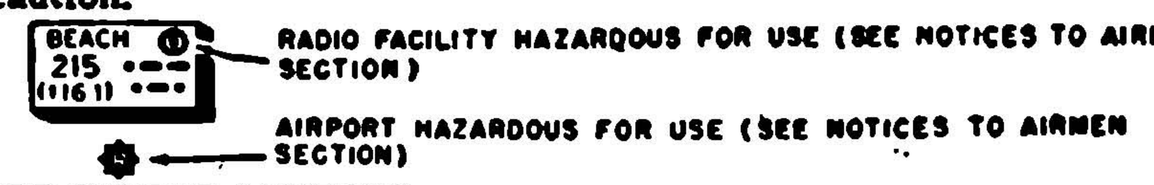
The Flight Planning Charts, in addition to the warning (R) and caution (O) symbols, indicate: (1) all aeronautical radio facilities except air carrier stations; (2) all minimum safe altitudes and fix mileages; (3) all Army and Navy fields and CAA intermediate fields, and all active civilian airports; (4) all danger and caution areas; (5) all designated airways. These charts indicate all facilities, and the current status thereof, on record with the CAA as of 0001 E.S.T. each alternate Tuesday.

CHART PURPOSE & USE

The primary purpose of these charts is to facilitate the planning and execution of cross-country flights. The user should check the charts for the symboled (R) or (O) items between his point of departure and his destination. If there is none, there is no necessity for him to read the Notices to Airmen section as far as temporary items are concerned. As for permanent changes - all major ones, such as new fields, abandoned fields, range frequency changes, etc., are currently reflected on the charts. For record-keeping purposes and for the correction of charts and publications, however, the Notices to Airmen section should be carefully read.

CHART HAZARD SYMBOLS

The current status of facilities and hazards as reported to the CAA is indicated by the symbol system. An airport closed because of construction, an inoperative range, a revised range quadrant identification or range frequency, or course realignment of 20° or more, for example, are indicated by the symbol (R) for red, or warning. An airport under construction but usable, or an inoperative control tower, on the other hand, is indicated by the symbol (O) for orange, or caution.



RANGE COURSE LENGTHS

In general, the length of radio range courses shown herein indicates the approximate location where it is expected that a pilot will tune from one radio range to the next one along his route of flight. Such change-over points, however, are not mandatory, and it is expected that a pilot will use his best judgment in selecting change-over points that will best serve his needs.

Warning

Radio range courses are subject to disturbances that result in multiple courses, and signal fades and surges over rough country. Pilots flying over unfamiliar routes are cautioned to be on the alert to detect these vagaries, particularly over mountainous terrain.
